#### ABSTRACT

**IDENTIFIERS** 

This report presents a description of state policies regarding the participation of English language learners (ELLs) in statewide assessment programs during the 1998-1999 school year. The data collected included descriptions of policies: (1) for the inclusion and exemption of ELLs; (2) regarding the allowance or prohibition of accommodations in general as well as specific types of accommodations; (3) regarding the inclusion of accommodated test scores in state, district, and school totals; and (4) for use of alternate assessments and policies for reporting the resulting scores. The study is based on the direct analysis of documents provided primarily by directors of bilingual and English-as-a-Second-Language education in each state (two states do not have state assessment programs). Findings show that while almost all states (48) have exclusion/exemption policies, there is great variability in the degree to which state policies address aspects of ELL participation. Forty-six states allow some form of exemption. One finding of note is the absence of academic criteria from the list of criteria to be considered when making inclusion/exemption decisions. States offer accommodations that can be divided into presentation, response, setting, and timing/scheduling categories. Most state policies do not specify that a person with professional knowledge of language learning processes participate in the decision making process. Policies regarding alternate assessment measures for ELLs are absent from most state assessment programs. The report recommends that states review and revise their existing policies to align them with current legislation and good practice. Three appendixes contain study cover letters, discussions of documentation and alternate assessment, and the fourth appendix contains the individual state reports on state inclusion and accommodation policies. (Contains 11 tables, 18 figures, and 33 references.) (SLD)

#### Acknowledgements

This study represents the collaborative efforts of several people who gave diligent attention to and invaluable support for its completion. We are grateful for the exceptional contributions of the Title VII directors who responded perseveringly to our requests for information. They located, reviewed and sent state documents pertinent to the inclusion and accommodation of ELLs. Subsequently, they expended considerable energy verifying the accuracy of our analyses of their policies. State Assessment directors also generously took time to review the individual state reports.

We thank Diane August for thoughtful and substantive advice on an initial draft of the report form, *State Inclusion and Accommodation Policies for LEP Students,* found in Appendix D.

The vision, guidance and contribution to the conceptualization of the study by OBEMLA Director Delia Pompa were invaluable. Her understanding of the need for the study motivated her strong support for its funding. The assistance offered by the OBEMLA staff was certainly appreciated, particularly the input and feedback offered by Milagros Lanauze, the project officer, who assisted at varying stages of the project.

The breadth of the study required in-depth knowledge of state assessments and the inclusion of English language learners. The many voices who gave thoughtful reviews, provided helpful comments and proposed valuable recommendations include:

- Diane August, August and Associates
- Pasquale DeVito, Director, Office of Assessment, Rhode Island Department of Education
- Tom Fisher, Administrator, Assessment and Evaluation Services, Florida Department of Education
- Milagros Lanuauze, Senior Education Program Specialist, US Department of Education
- Kristin Liu, Research Fellow for LEP Issues, Minnesota Assessment Project, National Center for Educational Outcomes
- Delia Pompa, Executive Director, National Association for Bilingual Education
- Heidi Ramirez, Special Assistant to Deputy Director of Education, US Department of Education
- Sharon Saez, Senior Education Program Specialist, US Department of Education
- William Schafer, Associate Professor, Maryland Department of Education, University of Maryland
- Jan Sheinker, Educational Services, Inc.
- Roger Trent, Director, Division of Evaluation and Assessment, Ohio Department of Education
- Kit Viator, Administrator, Accountability & Evaluation Services, Massachusetts Department of Education
- Hugh Walkup, Standards Team Leader, US Department of Education
- Annette Zehler, Senior Associate, Development Associates

Finally, a special thanks to staff members of the Center for Equity and Excellence in Education at the George Washington University staff who contributed their time and energies to support this study. Barbara Hicks, Mary DuRoss and Theresa Bui diligently tracked state documents and followed up collecting documents from Title VII and State Assessment directors. Nicole Chase and Sharron Coleman received and organized the numerous state documents submitted. Their efforts were untiring and greatly appreciated.

#### **Executive Summary**

The Improving America's Schools Act of 1994 (IASA) requires states to adopt a standards-based system where all students, including limited English proficient (LEP) students, also known as English language learners (ELLs), are expected to reach the highest standards. One important element of standards-based system the assessment. IASA requires states to implement assessment systems by the school year that allow all 2000-2001 students the opportunity to demonstrate their skills and knowledge. As IASA implementation deadlines approach, the development of new state policies is a major focus of many states.

This report presents a description of state policies regarding the participation of English language learners (ELLs) in statewide assessment programs during the 1998-1999 school year.

The collected regarding **ELL** data participation in state assessment programs included: 1) policies for the inclusion and exemption of ELLs; 2) policies regarding the allowance or prohibition of accommodations in general as well as specific types of accommodations, including the criteria states use to make accommodations 3) policies regarding the decisions: inclusion of accommodated test scores in state, district, and school totals; and 4) policies for use of alternate assessments and policies for reporting the resulting scores.

We analyzed the documents with the following broad questions in mind:

- What were the states' inclusion/exemption policies in the 1998-1999 school year?
- What were the states' accommodation policies for ELLs in the 1998-1999 school year?
- 3. What were states' score reporting policies for ELL students who received an accommodated version of a state assessment in the 1998-1999 school year?

4. What were states' alternate assessment and score reporting policies for ELL students in the 1998-1999 school year?

#### Methodology

The study is unique in that it is based on the direct analysis of state documents provided primarily by Title VII Bilingual and English as a Second Language (ESL) directors in state education agencies. Some State Assessment directors also provided policy documents in states where Title VII directors were in transition. We requested the following types of information:

- State assessment handbooks which include the policies for exempting, assessing, and accommodating ELLs;
- Any state assessment policy memorandum applicable to the inclusion of ELLs in state assessment programs and not included in the state assessment handbook;
- Any guidelines the state provides to districts, schools, or test administrators regarding the implementation of policies for exempting, including, or accommodating ELLs; and
- Any documents the state has produced to help districts and schools implement state assessment policies for ELLs.

Once all states (including the District of Columbia) with state assessments (lowa and Nebraska do not have state assessment programs) submitted policy documents, they were classified by document type. The most common types submitted included the following: guides, guidelines, manuals, and Next, the documents were handbooks. classified by the degree of relevance to the study. The relevant documents served as the basis for the policy analysis. Following the analysis, state reports were generated and sent to the Title VII and State Assessment Directors for review. The resulting analysis and final report provide a nationwide description of inclusion and accommodation policies.

#### Results

Inclusion Policies: Criteria and Decision-Making

Historically, states have often systematically exempted ELLs from inclusion in state mandated assessment programs. Improving America's Schools Act of 1994 (IASA) requires states to create one assessment system that is appropriate for all ELLs. students. including The documents analyzed for this study reveal that, for the 1998-1999 school year, 47 states and the District of Columbia have policies that address the inclusion and/or exemption of ELLs in state assessment programs.

The policy documents indicate that, while almost all states have inclusion/exemption policies, there is great variability in the degree to which state policies specifically address various aspects of ELL participation in state assessments. Some states provide detailed guidelines for helping local districts and schools make appropriate decisions, while other states offer no specific guidance. Of the 47 states and the District of Columbia that have inclusion/exemption policies, 46 allow some opportunity for exemption. Of these, 35 have policies regarding exemption time limits. The majority, 21 states, set a three-year limit on exemptions. states set a two-year limit, two states allow more than three years, and one state has no time limit.

The criteria to be used in making inclusion decisions are addressed by most states (45). The greatest number of states (17) considers only one criterion. Eleven states consider two criteria, eight states consider three criteria, and the remaining eight states consider four or more criteria. Of the 17 states that focus on one criterion, 9 use a time-related criterion and the remaining states use a variety of different criteria. The criterion used by the most states (23) to make inclusion/exemption decisions is the student's English language proficiency as determined through a formal language proficiency assessment.

One finding of note is the absence of academic criteria from the list of criteria to

considered when be making inclusion/exemption decisions. Academic criteria, which are related to a student's academic background, include performance on tests other than the standard test (specified by 11 states as an appropriate criterion), performance in school work (specified by 6 states as an appropriate criterion), and the student's academic background in his/her native language (considered by 3 states as an appropriate criterion).

The kinds of individuals who should participate in the decision to include or exempt a student are identified by 39 states in their written policies. The most prevalent decision-makers are school/district official(s) (25 states). parent(s)/guardian(s), states), and a local committee composed of unspecified members (18 states). student's classroom teacher is nominated by 14 states. A substantially smaller number of states specify inclusion of the student (6 states), the student's ESL/bilingual teacher (4 states), and the test administrator (4 states) in the decision-making process. It can be assumed that local committees include some of these decision-makers without naming them explicitly in state documents.

# Accommodation Policies: Allowance and Prohibitions

The report provides a national picture of state accommodation policies as well as a state-by-state analysis of state practices regarding the allowance and prohibition of accommodations for ELLs. Accommodations are changes in the test or testing situation that address a student's special needs and that provide the student access to the test to enable him/her to demonstrate academic knowledge. The use of accommodations is intended to level the playing field for students who receive them. As applied to ELLs in testing situations, the student's special needs **linguistic** are his/her because of limited English proficiency.

States offer accommodations that can be classified into four types: 1) presentation, 2) response, 3) setting, and 4) timing/scheduling. The most prevalent

х

accommodation types are ones that modify setting either the test or timina/schedulina. Examples of setting accommodations include individual or small group administration, and administration in a separate location. Timina/schedulina accommodations are also popular. include extended testing time and extra frequently used Less accommodations that affect the presentation of the test. Presentation accommodations include explanation, repetition, or oral reading of directions, bilingual or translated versions of the test, and administration of the test by a person familiar to the student. Response accommodations include allowing a student to dictate his/her answers, and allowing a student to respond in his/her native language.

While 40 states have accommodation policies for ELLs, only 37 states allow accommodations. Of the 37 states, 13 prohibit at least one accommodation. Three states prohibit all accommodations.

An important finding with regard to accommodations is that states more frequently use accommodations that do not support the linguistic needs of ELLs. These include timing/scheduling and setting accommodations. The accommodations which can address the linguistic needs of ELLs are least frequently allowed and most prohibited. frequently These include presentation response and accommodations.

# Accommodation Policies: Criteria and Decision-Making

Twenty-six states address the criteria for making decisions to provide accommodations to students taking state assessments. The majority of these states (21)make decisions to allow accommodations based on the student's routine classroom accommodations. Fifteen states use one criterion to determine accommodations; 13 of the 15 one-criterion states specify that the accommodations should be the allowed routinely provided accommodations The next most classroom instruction. popular criterion for determining the need for accommodations is formal assessment of

English proficiency, which is used by six states.

Regarding state policies that address decision-makers, 23 states make some mention of a decision-making person or team. The most prevalent decision-maker is the student's classroom teacher. Fourteen states recommend teacher participation. Twelve states recommend setting up a local committee, but without specifying the kinds of people who should make up the committee. Eleven states recommend the involvement of school/district officials and parents/quardians. Test administrators, ESL/bilingual teachers and the student are mentioned explicitly in only a few state policies. Of note is the low frequency with which states specify that the student and ESL/Bilingual teachers be included in the decision-making process.

#### Reporting Results

Some states have specific policies on the inclusion of LEP students' scores in school, district, and state averages. These policies may also depend on the use of accommodations. Accommodations that are viewed as giving an unfair advantage may result in the student's score not being included in the reported averages.

For this study, 17 out of 37 states that allow accommodations produced documents that explain their score reporting practices (i.e., whether or not the scores of ELLs who receive accommodations are included in state, district and/school totals). documents submitted by these states are characterized by lack of detail and comprehensiveness. Of the 17 states that address score reporting, 9 states indicate that, when specific accommodations are used, scores are not to be included in state. district, and/or school totals. Eight states have a policy requiring the scores of ELLs who have received accommodations to be included in state, district, and school totals.

#### Alternate Assessments

Alternate assessments are formal tests or assessment procedures that may be used when standard assessments are inappropriate for the student due to lack of language proficiency or other matters. State policies regarding alternate assessments vary widely. The majority of states that have statewide assessments (27) do not mention them. Of the 22 states that refer to alternate assessments in their policies. 7 states prohibit alternate assessments, while the remaining 15 states allow them, including 6 states that require ELLs be given an alternate assessment when the student is exempted from the regular assessment. Technical and practical issues surround the use of alternate assessments. Among the 15 states that allow alternate assessments, the majority are far from having a fully developed alternate assessment program.

#### Conclusions

The analysis of states' policies regarding the inclusion, exemption, and accommodation of ELLs in state assessments provides a nationwide picture of current state practices. The analysis of the states' policies leads to the following conclusions about state assessment program policies for ELLs in the 1998-1999 school year:

- 1. Almost all states (48, including the District of Columbia) have inclusion policies for ELLs. Forty-six (46) states allow some form of exemption. Of these, 35 states have policies regarding exemption time limits. Most states (40) have accommodation policies.
- 2. State policies generally provide minimal guidance to local districts and schools.
- State policies vary significantly in detail and in their focus on ELL assessment needs. They are often brief, lack specificity,

and do not address important aspects of ELL participation in state assessments.

- 4. Most states' policies do not specify the consideration of a student's academic background as a criterion for inclusion/exemption decision-making.
- 5. Most states' policies do not specify that a person with professional knowledge of language learning processes, such as an ESL or bilingual education teacher, take part in the decision-making process.
- 6. The accommodations most frequently allowed are carried over from Special Education accommodation policies and are not specifically designed to address the linguistic needs of ELLs.
- 7. Accommodations, like test translation, that would provide the greatest amount of language support for some ELLs are among those least frequently allowed and most frequently prohibited.
- 8. Policies regarding alternate assessment measures for ELLs are absent from most state assessment programs.

In light of the efforts to provide equitable educational opportunities for all students, state inclusion, exemption, and accommodation policies generally need to be more fully developed, and to be periodically reviewed and updated to reflect the increasing understanding of the subject.

The final section of the report recommends that states review and revise their existing policies so that they are aligned with current legislation and good practice. The report concludes with recommendations for additional research that needs to be carried out in order to further the equitable assessment of English language learners.

χij

#### I. Introduction

The purpose of this study is to document inclusion, exemption and accommodation policies related to English language learners (ELLs) for state<sup>1</sup> required assessments. The documentation is based on an analysis of state policies in place during the 1998-1999 school year.<sup>2</sup> Hundreds of documents were collected from State Education Agency (SEA) Title VII Bilingual and English as a Second Language (ESL) Directors in all 50 states and the District of Columbia.

We analyzed the documents with the following broad questions in mind:

- What were the states' inclusion/exemption policies in the 1998-1999 school year?
- What were the states' accommodation policies for ELLs in the 1998-1999 school year?
- 3. What were states' score reporting policies for ELL students who received an accommodated version of a state assessment in the 1998-1999 school year?
- 4. What were states' alternate assessment and score reporting policies for ELL students in the 1998-1999 school year?

Finding answers to these questions is critical considering the current emphasis on standards for school and student accountability. The Improving America's Schools Act of 1994 (IASA) requires states and districts to adopt a standards-based system where all students, including limited English proficient (LEP) students, also English language learners known as (ELLs)3, are expected to reach the highest standards. Standards-based reform not only calls for setting standards but also for establishing accountability systems that ensure all students reach those standards (LaCelle-Peterson & Rivera, 1994). The consequent emphasis on accountability requires states to find appropriate and equitable ways to involve all students in state assessment programs, including those who are in the process of learning English.

The inclusion of ELLs in standards-based systems and state assessment programs has proven to be a particular challenge. Since the passage of IASA in 1994, states demanded extensive technical have assistance from the U.S. Department of Education (ED) and ED-funded technical assistance entities to help them meet the requirement to appropriately include ELL students in state assessment programs. As part of technical assistance, there is also the demand from both states and districts to find out what other states or districts with similar demographics and challenges are doing to meet this requirement (Office of Bilingual Education and Minority Language Affairs [OBEMLA], 1999).

Moreover, the status of state assessment systems has changed continually since the passage of IASA in 1994. IASA requires states to create one assessment system that is appropriate for all students, including ELLs. For the most part, states have developed and put in place transitional assessment systems, but few have final assessment systems in place. deadlines approach in the IASA legislation for final assessment systems, the U.S. Department of Education has developed criteria to judge the acceptability of these assessment systems (U.S. Department of Education, 1999). It is, therefore, critical to analyze the status of current and emerging state policies in this challenging area.

<sup>&</sup>lt;sup>1</sup> Throughout this report, any reference to states includes the District of Columbia.

<sup>&</sup>lt;sup>2</sup> As this report is being completed, some states have begun implementing changes to their policies for the 1999-2000 school year. This report, however, is limited to policies in place during the 1998-1999 school year.

to policies in place during the 1998-1999 school year.

By definition, limited English proficient (LEP) students are those who do not have sufficient English language speaking, understanding, reading and writing skills to participate in an all English classroom. These students are often unable to participate in conventional English language assessments because they do not generally

have the English language skills needed to participate meaningfully in testing conducted in English (OBEMLA, 1999). In communicating with the states about the study, we used the term LEP because it is the commonly used term. In this report, however, we use the term English language learner (ELL). ELL refers in a positive way to a student who is in the process of learning English.

Previous compilations of information on what states are doing to include ELLs in assessment systems are dated (Lara & August, 1996; O'Malley & Valdez-Pierce. 1994; Rivera, Vincent, Hafner, & LaCelle-Peterson, 1997). Thus, there is a need for an updated picture of state policies for including, exempting and accommodating ELLs in state assessment programs. In recognition of this need. **OBEMLA** commissioned the Center for Equity and Excellence in Education at The George Washington University to conduct this study.

To gain perspective on the current status of inclusion, exemption and accommodation policies related to ELLs, we first review recent literature describing the everchanging status of state ELL assessment policies.

We then describe the methodology used to collect, input, and analyze the states' assessment policies. Our analysis uses state policies to provide answers to the study's research questions. The goals of the analysis are 1) to describe the issues related to including and accommodating ELLs in state assessments; 2) to analyze what states have done so far by looking across states at the national picture and to extract from that picture trends and issues; and 3) to develop state-by-state reports based on our examination of individual state policies. These reports are included in Appendix D.

#### **Definitions**

For clarity and because some terms have acquired different meanings over time, we provide definitions of certain terms used in this report. The reader should keep in mind that terms might be used and understood somewhat differently in different states, thereby making the process of researching and discussing testing practices more complex.

Accommodation(s): This is a broad term that refers to any specific change to the testing situation, (e.g. presentation format, response format, setting, and the timing/scheduling of tests). The utilization of accommodations for a specific ELL, or all ELLs, is a means of enabling them to

demonstrate their academic knowledge despite their limited English proficiency.

#### Alternate Assessment, Alternative

Assessment: In the late 1980s, the term "alternative assessments" came into use. The term referred to any measure that was not limited to the use of multiple-choice items. It was often used synonymously with performance assessment. Because the term "alternative assessment" already had a specific meaning, the term "alternate" came to be popularly used to refer to surrogate assessments created for special populations.

"Alternate assessments" are generally thought to be assessments for special populations of students, such as students with disabilities and students with special needs, i.e., ELLs. They are used when administration of the standard assessment would be highly inappropriate. Alternate assessments may come in any format, and they may or may not test the same content or standards as the standard assessment. Therefore, they may not be comparable with the standard assessment.

The usage of the terms "alternate" and "alternative" assessment in state policies is inconsistent. Because assessments often contain the nontraditional item formats associated with alternative assessment, some states simply never began using the term "alternate." "alternate" is the preferred term, "alternative" is used in some states, and in some others the terms are used synonymously in the same document. Thus, the intended meaning of the term "alternative assessment" in a state document is not always clear, even to a well-informed reader. However, since a majority of state policies use the term "alternate assessment", for consistency we use this term throughout the report.

<u>Deferral:</u> The practice of postponing participation of ELLs in assessments for a specified period of time. Deferral always requires some sort of exemption.

<u>Exclusion:</u> The practice of NOT allowing ELLs to participate in a state required formal assessment.

<u>Exemption</u>: The practice of allowing a specific ELL, or all ELLs, NOT to participate in a state-required formal assessment. An exemption may be temporary (as in the case of a deferral) or permanent.

<u>Inclusion:</u> The practice of including a specific ELL, or all ELLs, in a state mandated formal assessment.

Inclusion/Exemption Policy: The term is used in this report because of the nature of state policies. Some states' focus policies on who should included in the testing program. Other states' policies focus who on should be exempted.

<u>Modification</u>: Sometimes the words "accommodation" and "modification" are used synonymously within and across state policies. However, in this report "modification" is used to mean a type of accommodation that involves a change in the test format (e.g., linguistic simplification, an adaptation, or a special version of the test).

Sometimes the word "modification" implies that the scores obtained on the test may not be comparable with scores on the standard assessment. A modified test should not be confused with an alternate assessment, which can be quite different from the standard assessment. The use of

modification employed here is quite frequently encountered in state policies.

Out of level testing: In a few states, when a test is considered inappropriate for a student, testing "out-of-level" may be permitted. Out-of-level testing means that a test from a grade level other than the current grade level of the student is administered. When allowed, it would be possible for an eighth grade student to take a sixth grade test. Depending on state interpretation, out-of-level testing may be considered an accommodation or an alternate assessment.

<u>Test Component:</u> Refers to any portion or subsection of a state's entire assessment program. It may refer to an assessment of a single subject that may or may not be administered at a given grade level, or to a part of a subtest.

<u>Translation/Adaptation:</u> A translated test is one where the same exact content is rendered into a non-English language. The standard test and translated test then differ only in language, not in content.

An adaptation is a modified version of the standard assessment. Due to the nature of some tests, adaptation is required in order for the standard test to be appropriately rendered into a non-English language; adaptation involves removing some items and replacing them with others that are more valid for the examinee population.

#### II. Review of Literature

IASA requires states to implement comprehensive assessment policies and programs by the 2000-2001 school year. As that deadline nears, states have increased their efforts to develop and implement appropriate assessment systems to ensure the inclusion of ELLs.

The literature related to the inclusion of ELLs in large-scale assessments, such as the National Assessment of Educational Progress (NAEP) and state assessment programs, is limited and tends to take the form of policy statements rather than empirical data. The scarcity of empirical data in this area indicates a need for direct examination of assessment policies and practices for ELLs, particularly as they have an impact on efforts to provide an equitable education for all students.

#### Definition and Identification of English Language Learners

Efforts to address the needs of English language learners as a specific student population require, as a first step, a means for defining and identifying ELLs. Without a common operational definition and specific guidelines, the process of identifying ELLs is subject to inconsistency across and within states.

O'Malley and Pierce (1994) assert that proper identification and placement of ELLs is a critical step for determining which students need special language services, types of services are appropriate, and which criteria should be met to properly reclassify or exit students from these services. Because statewide test scores are often the basis of various moderate to high-stakes decisions, it is important to include ELLs in the tests used to make such decisions. Moderate to highstakes decisions based on test scores are made on such issues as: 1) state funding allocations, 2) curriculum restructuring, 3) staff development, 4) teacher certification and pay. 5) determination of which teachers retain their positions, 6) changes in school governance structures, 7) grade promotion standards, 8) requirements for placement in advanced courses, and 9) requirements for

high school graduation. Many of these have a significant impact on the instruction the ELL receives.

Results of the O'Malley and Pierce (1994) survey of 34 SEAs regarding participation in state testing indicate that in 1991, fewer than one-third of the states required any kind of assessment instrument for the identification of ELLs. Of the states that did require use of an assessment instrument, not one had established a specific criterion -- such as a designated score on a specific standardized test or a specific level on an English proficiency test -- that would have provided local districts with a standard for identifying ELLs.

O'Malley and Pierce view this as an absence of a focused effort to implement specific guidelines for identification of ELLs. In view of the fact that identification is the first of many steps in developing an appropriate process for deciding ELL participation in state assessment programs, the authors see the infrequent use of assessment instruments to identify ELLs as a cause for concern.

Findings from other research are consistent with those of O'Malley and Pierce. Rivera, Hafner and LaCelle-Peterson (1997) found that, though legislation had created a federal definition of ELLs4 (IASA, 1994), there was no common operational definition across states. As a result, a student who was identified as an ELL in one state might not be identified as an ELL in Similarly, in a study of ELL participation in state tests in Minnesota (Spicuzza, Erickson, Thurlow, Liu, and Ruhland, 1997), school administrators and ESL and Bilingual Education teachers expressed great concern over the lack of consensus on the definition of ELLs, and the resulting confusion and uncertainty this caused when trying to decide on appropriate participation.

Findings of this nature have prompted the authors of these studies, and other educators (August, Hakuta, and Pompa, 1994; National Association of State Boards of Education [NASBE], 1997) to encourage

<sup>&</sup>lt;sup>4</sup> The IASA definition appears on page 17 of this report.

states to adopt a common operational definition of ELLs, as well as to provide specific guidelines for local schools to use in identifying ELLs.

# <u>State Policies/Practices for Including</u> and Exempting ELLs

According to a report from the U.S. General Accounting Office (1994), the appropriate inclusion of ELLs in state testing programs is a critical factor in efforts to achieve equity in education for all students. Policies that provide for the inclusion of all students, including ELLs, offer multiple benefits to the schools, as well as to the students (NASBE, 1997). The benefits to schools may include the accurate identification of ELLs and the gathering of more complete student information on them. These benefits can lead to well-informed decisions and policies. For example, the information gathered could be used to identify special service needs, which can then lead to the provision of new or improved services to ELLs. Continual updating of information on students' background and achievement can be used as a means for schools to monitor student progress. The monitoring of student progress is an important element in state and district accountability for ELLs. Student benefits of inclusion policies include equitable participation in the educational system, the opportunity to demonstrate knowledge and skills, and the experience of test taking, a learning experience in itself.

#### Exclusion

Historically, the means of addressing the needs of ELLs in state testing frequently has been to exclude or defer them (Rivera & Vincent, 1997). In an examination of exclusion policies, August, Hakuta and Pompa (1994) list factors that may contribute to the exclusion or deferral of ELLs from large-scale assessments. The list includes reference to the various aspects of the inclusion/exemption decision-making process. Factors include the following: 1) the lack of clear and consistent operational definitions of ELLs at the national, state and local levels; 2) guidelines that exclude students who are in bilingual education and English as a second language (ESL) programs; 3) the varying degrees of English language proficiency of students in bilingual

and ESL programs; 4) guidelines that allow local decisions to be made about ELL participation; 5) differential implementation of guidelines; 6) failure to monitor the extent to which the intent of the guidelines is followed; 7) lack of accommodations in assessment materials and procedures that would enable ELLs to participate; and 8) a desire not to require ELLs to take an assessment they cannot understand because of limited English proficiency.

In 1994, Lara and August (1996) sent a questionnaire to all states concerning their policies toward **ELLs** in statewide Of the 43 states that assessments. responded, 35 permitted their exemption. Only five states required ELLs to participate, and three of these permitted their exemption under certain conditions. Four states left the participation up to local districts. In such cases, the states routinely specified that the "tests should not be given if it will cause undue frustration or produce useless or invalid scores" (p. 8).

Widespread exclusion policies bring about a systemic ignorance of the educational progress of the students involved. This has often led to ELLs being assigned to remedial tracks and lower-level curriculum tasks (LaCelle-Peterson & Rivera, 1994). DeVito (1997) reported that, before recent reform took hold, such a policy of widespread exclusion existed in Rhode Island. policy of exclusion led to inaccuracy of information, because schools could provide no information on students who were not included in assessments. Data reports without information on excluded students were often presented as complete. National Association of State Boards of Education (NASBE, 1997) stated that exempting ELLs from state testing means that in some schools, testing information is available for less than one-half of the student body, while the majority of the student body -- the excluded students -- are not being held accountable to state standards.

#### **Exemption Time Limits**

Some state exemption policies specify time limits or provide criteria for deferring students. In a 1997 study of ELL

participation in high school graduation tests. Rivera and Vincent found that, of the 17 states that required students to pass a high school graduation test, eight allowed deferrals for ELLs. The deferrals typically ranged from six to twelve months. While the intent of the states that apply this policy is to allow the students time to improve their English language skills, it is likely that some students need more than six to twelve to achieve months а level cognitive/academic language proficiency in English that is appropriate for successful test-taking. Some students, those with a high degree of literacy, may be able to read and learn in a new content area within a vear: such students are able to benefit from inclusion in the assessment within this short period of time. Others may take longer (Collier, 1992; Cummins, 1989).

A further concern related to the imposition of exemption time limits is the issue of testwiseness. Students who traditionally have been exempted from tests do not have the opportunity to benefit from the testtaking experience (Rivera & Vincent, 1997). When these students are ultimately faced with a test-taking situation, they are likely to lack familiarity with the testing process, and the lack of subsequent confidence to succeed in the test. In a 1998 survey of educators in Massachusetts regarding the implementation of a new state assessment system, Lachat and Brown found testwiseness to be one issue of concern. One Transitional Bilingual Education director responded, "We plan to work with the children on testwiseness. This task is out of the universe for these kids. mechanics of it are so foreign. Most of our kids do not read on grade level and they've never seen tests like this before" (p. 16).

#### Inclusion/Exemption Decision-Making

Various aspects of the inclusion/exemption decision-making process include the identification of ELLs, the gathering of student information, consideration of the student's information in light of appropriate criteria, and the decision-making itself. By having clear policies and providing clear guidelines for implementation, states can equip local schools with measures that ensure consistency in ELL practices. In

considering polices that would ensure this consistency, Rivera and Stansfield (1998) proposed a framework for designing and implementing appropriate decision-making systems. The authors recommend a system of teams at the state, district, school, and individual student levels. Composition of the teams would vary by level so as to include the most suitable individuals. This system would include representatives of the stakeholders. **ESL** and bilingual coordinators, school administrators, regular classroom teachers, ESL or bilingual teachers, and parents. The teams would have specific duties and responsibilities. Teams at the state level would set policy and provide specific guidelines, which would be implemented at the school and individual student levels. The system would require close consideration of the student's personal. academic. and linguistic background as critical factors in the decision to include and/or exempt a student.

Research regarding decision-making policies indicates that existing decisionmaking systems are more general than specific in detail and focus. Stancavage and Quick (1999) found that state policies are often too vague to be useful, and that written guidelines have little impact on inclusion decisions of local personnel. Similarly. O'Malley and Pierce (1994) point out that "most guidelines regarding participation of [ELLs] in statewide assessment programs are sufficiently broad as to be of little value to school staff" (p. 244).

In a survey of educators in Minnesota regarding the development of a new state assessment system. Liu. Spicuzza. Erickson, Thurlow, and Ruhland (1997) found that inclusion/exemption decisions were often made by individuals or teams with little professional knowledge of ELL needs, and that respondents often either did not know what the decision-making process was, or else they felt the process was inadequate. Of note is that 90 percent of such responses came from educators in large urban areas, which are likely to have the highest concentration of ELL populations.

Considering the many issues involved in inclusion/exemption decision-making, it

seems most likely that state policies offering specific guidelines for determining appropriate participation for each student could lead to consistent decisions at the local level across a state. Specifically, decision-making processes that include educators who are most familiar with the student, who have knowledge of language acquisition processes, and who have experience teaching ELLs can likely result in appropriate and well-informed decisions.

# State Policies Regarding the Use of Accommodations

The use of accommodations is a relatively recent phenomenon when applied to statewide assessment programs and the inclusion of ELLs (DeVito, 1997). The policy of offering accommodations to ELLs is an extension of similar Special Education policies, a point that will be discussed in further detail in the Discussion section of this report. The effort to include all students in state tests warrants the use of practices that modify the test situation to enable ELLs to demonstrate their knowledge and abilities. IASA legislation requires that states make efforts to provide appropriate accommodations to give any one student an equitable opportunity to demonstrate his/her knowledge and skills.

Rivera and Stansfield (1998) note that the provision of accommodations, when used appropriately, can offer multiple advantages to both schools and students. For schools, the appropriate use of accommodations may improve the accuracy of test scores and increase the comparability of scores; minimize measurement error and increase the validity of the test; provide a means for some students who otherwise not be included; and lead to more accurate information on student populations. Accommodations allow more students to participate in the testing, providing a means of allowing the student to demonstrate knowledge and skills. Thus, they may make for a more equitable and meaningful testing experience. Ultimately, they can provide the school with a broad understanding of the achievement of all students on the particular tests used.

Rivera and Stansfield (1998) warn that. though the use of accommodations can offer many benefits, the selection of appropriate accommodations requires careful consideration. Inappropriate use of accommodations can occur in three ways: 1) if the accommodation were to give the student an unfair advantage over other examinees; 2) if the accommodation does address not anv particular student disadvantage; and 3) if the accommodation were to have a negative, rather than positive, impact.

First, an example of an accommodation that could give an unfair advantage is allowing an ELL to use a monolingual dictionary in English or the student's native language. In comparison with a bilingual dictionary, a monolingual dictionary typically offers much more information, including definitions. It would be unfair if one group of students has access to definitions of scientific terms, for example, while other examinees do not.

Second, an example of an accommodation that might not adequately address a particular student disadvantage is the allowance of extra time. Additional time may be of no benefit to students whose level of English proficiency is so low that they simply cannot understand the test questions.

Third, an example of an accommodation that could have a negative impact is a decision to test all ELLs who speak a certain language with a translated version of the test in that language regardless of their academic background. Students not literate in their first language will be at a disadvantage regardless of whether they take they test in the native language or English. Similarly, if the students have not received instruction in their first language in the subject matter of the test, but have received such instruction in English, they may suffer greater disadvantage than if they take the test in English.

In light of the multiple issues involved in the provision of accommodations, it seems critical that state accommodation policies provide a means for local schools to make appropriate accommodation decisions. Such policies would likely include specific guidelines for the appointment of a

knowledgeable decision-making team, as well as for the consideration of multiple criteria in arriving at the most appropriate decision.

Development of the multi-level system proposed by Rivera and Stansfield (1998) can provide the mechanism for states to ensure that state policies are carried out at the local level. The authors recommend the decisions be made by a local assessment team on a case-by-case basis. This team can select from a list of allowable accommodations recommended by a similar assessment team at the state level.

Various studies have focused on existing accommodation systems. One such study was conducted in Rhode Island, where a new state policy designed to include all students in testing provides a list of more than fifty accommodations from which local assessment teams can choose (DeVito, 1997). The accommodations are classified into one of four groups: administration (we refer to these as presentation), response, timing (scheduling) and accommodations. DeVito reported the most frequently used accommodations in Rhode Island as the repeating of test directions, and the reading of questions orally -- both of which are presentation accommodations. In general, there is evidence of regular and frequent use of setting, scheduling, and presentation accommodations (Rivera and Vincent, 1997; CCSSO, 1997; Olson and Goldstein, 1997).

#### Studies of the Impact of Accommodations

While the provision of accommodations seems to be an appropriate policy for the ELL population, few studies exist that examine the impact of specific accommodations on student scores. Abedi (1999) examined ELL math scores of eighth grade students in California. Specifically, he studied the impact on scores of four accommodations: linguistic simplification of test items, provision of an English language glossary, extended time limits and, finally, the combination of the use of an English language glossary and extended time limits. The results indicated that, regarding the linguistic simplification of test items, a student's level of proficiency was related to the usefulness of the accommodation. Neither the extended time limits nor the provision of an English language glossary significant impact on performance. In fact, the use of an English language glossary as the only accommodation resulted in lower scores. However, when provision of an English language glossary was combined with extended time limits, there was a positive impact on ELL scores.

In another study, Shepard, Taylor, and Betebenner (1999) examined the impact of a number of accommodations on mathematics test scores for fourth grade students in Rhode Island. Results revealed relatively little impact on scores from many of the accommodations, including the allowance of extra time.

In a similar study of grade eight students in New Jersey, Miller, Okum, Sinai, and Miller (1999) looked at the impact on test scores of three frequently utilized accommodations: allowance of extra time, use of a bilingual dictionary, and translation of directions. The results showed a general inconsistency in test score impact within and across the accommodations. In some cases. accommodated students scored significantly higher, in others lower, and in others, there was no significant difference. Miller, et al. view these inconclusive results as indicating need for caution in selecting the accommodations and they recommend accommodation's of an examination potential impact on scores before making accommodation one available. Similarly, as a result of a study of ELL participation in state tests in Minnesota, Spicuzza, et al. (1997) see a need for close examination of the potential impact of "The empirical specific accommodations: evidence supporting accommodations for [ELLs] in a testing environment is scarce and should be researched. The best way to examine the outcomes of accommodations is for districts and [SEAs] to track student outcomes and to decide upon valid and allowable accommodations" (p. 10).

#### Testing in the Native Language

As a means of accommodating ELLs, testing in the native language can be useful in

providing a more accurate appraisal of a student's knowledge of the content tested, i.e., one that is not influenced by the limited proficiency. student's English Although use of an interpreter is sometimes allowed as an accommodation, formal assessment in the native language is best conducted through the use of a written translation or adaptation of the original version of the test (Stansfield, 1996). A translated test is one where the same exact content is rendered into a non-English language. The standard test and translated test then differ only in language, not in content.

An adaptation is a modified version of the standard assessment. Due to the nature of some tests, adaptation is required in order for the standard test to be appropriately rendered into a non-English language: adaptation involves removing some items and replacing them with others that are more valid for the examinee population. However. adaptation affects comparability of raw scores of the standard and adapted versions, and necessitates appropriate statistical adjustments to ensure score comparability. The change in test content raises validity concerns, especially if a substantial number of items are changed. As a result, it becomes necessary to demonstrate the equivalence of the constructs measured by the standard and adapted instruments. Because of this, adaptation is rarely used in assessments. Instead, tests whose validity and comparability may change if translated or adapted, are simply not translated or adapted at all.

While the distinction between translated and adapted tests is important, even translated tests normally require minor adjustments to accommodate the language of the non-English version.

Other issues to be considered in offering translated tests include whether the original test is translatable and whether the translated version is appropriate for any one student. Cost is also an issue, just as it is with the creation of alternate assessments. A central issue in considering the cost efficiency of a translated test is the number of students that may benefit from it. Cost

and numbers have restricted the creation of translated versions in languages other than Spanish, in most states that translate tests.

Not all students who are eligible to receive a translated test will actually choose it over the standard test in English. Often, such students are not fully literate in their native language. Because of this, bilingual test booklets are often used (Stansfield, 1997; Stansfield & Kahl, 1998; Liu, Anderson, Swierzbin & Thurlow, 1999).

The literature regarding accommodations identifies several states that do provide translated tests. Lara and August (1996) identified 12 states that were administering, piloting, or planning statewide assessments in languages other than English in 1994. Rivera and Vincent (1997) found that New York and New Mexico offer translated versions of high school graduation tests. Stansfield (1996) noted that Rhode Island offers translated tests in four languages for grades four, eight, and ten. Lachat and Brown (1998) report that Massachusetts uses translated versions of its state tests at the fourth, eighth, and tenth grade levels.

Generally, the literature on translated and adapted tests treats the two the same and reflects a failure to differentiate the degree of technical concerns that come into play when considering these two options for assessing content knowledge in the native language. Hambleton (1994) has led the development of an international set of for translation auidelines test adaptation. These guidelines outline a variety of technical concerns, and suggest a variety of techniques for dealing with them. Sireci (1997) has reviewed statistical techniques for linking tests across languages. Olson and Goldstein (1997) point out that non-English versions of assessments are generally not available in most languages, and that opinions on technical issues, such as score comparability, mixed. Technical are concerns, whether well founded or not in the context of specific state assessments, may partly explain why only a handful of states translate their tests.

#### Alternate Assessments

An alternate assessment may be considered an assessment that is acceptable for a designated purpose. In this case, the purpose is to serve as a surrogate for the standard assessment, when use of the standard assessment would clearly not be suitable for the examinee.

Efforts to meet Title I requirements for the assessment of ELLs include development of alternate assessments to be administered to ELLs for whom the regular assessment is considered inappropriate. The Amendments to the Individuals Disabilities Education Act (IDEA) require that alternate assessment be used for students with disabilities who participate in the standard assessment program. This has resulted in recent efforts on the part of states to develop and implement appropriate alternate assessment programs for students with disabilities (Olsen, 1998). From Olsen's description of state various efforts to meet requirements, it is clear that there is wide variability among the states regarding the standards upon which the alternate assessments are based, the characteristics of the students to be given alternate assessments, and the degree to which the alternate assessments are a part of the overall assessment system. While the development of alternate assessments for ELLs is not yet so advanced, it is likely that it will follow a path similar to that followed for students with disabilities. The variability described by Olsen will probably characterize state efforts to provide alternate assessments for ELLs.

When taken in the place of the regular assessment, alternate assessments can provide many advantages, such as allowing students to demonstrate their skills and knowledge in meaningful ways (NASBE, 1997). Such measures as portfolio assessments. long-term projects. performance tasks are likely to measure skills that policymakers want students to develop. In contrast to traditional standardized tests, alternate measures can be designed to test content knowledge and skills that are not easily adaptable to traditional test item types. Alternate

assessments can also be designed to test a student over a longer period of time, which can result in a test score that is more meaningful and accurate. Alternate measures can allow flexibility in modes of expression, thus lessening the impact of language barriers for ELLs.

Concerns regarding the use of alternate assessments surround the question of the degree to which the assessment is not parallel to the standard assessment. Because alternate assessments do not test the same content or standards as the standard assessment, the comparability of the scores resulting from an alternate assessment with scores from a standard assessment is limited, as is the degree to which the scores can be used in accountability measures.

There are also concerns regarding the amount of resources required to develop implement appropriate alternate assessment systems. Such assessment measures as portfolio and performance assessments are likely to be less efficient in terms of time and personnel resources than traditional standardized assessments (NASBE, 1997). Similarly, a great deal of time and personnel resources are required the proper development implementation of alternate assessments that are parallel in all aspects to the standard assessment. Furthermore, the creation of strictly parallel alternate assessments may not always be desirable.

CCSSO (1997) data for the 1996-1997 school year indicate that 11 states reported offering alternate assessments during the 1996-97 school year. For the 1997-1998 school year, 13 states reported offering alternate assessments.

#### Score Reporting

Efforts to provide equitable education for all students have emphasized accountability at state and local levels (LaCelle-Peterson & Rivera, 1994). A critical element in accountability measures is the provision of data from student scores on state assessments. Page 4 of this report lists nine decisions that may be based on test scores.

Because test results have an impact on educational policy and practice, the inclusion of assessment scores of all students. including ELLs. is crucial (O'Malley & Pierce, 1994). Score reporting involves both aggregation disaggregation. When ELL scores are aggregated they are included in state. district, and local totals. As such, they affect the mean (average) scores for the state, district, and school. When ELL scores are disaggregated, they are reported separately for the state, district, and school. Disaggregated scores for ELLs would indicate the mean scores for all ELLs that Disaggregation permits a took a test. comparison of mean scores for different classifications of student. Common classifications are by sex, race, and special needs status, such as ELL or learning or physically disabled. Good score reporting practice involves both aggregation and disaggregation of ELLs' scores. Under such circumstances, ELLs' scores are included in state, district, and school means. The mean scores for each group are also reported.

With the approach of the 2000-2001 school year, the legislated deadline for the implementation of comprehensive assessment programs, all states need to establish policies that include ELL scores in all state reports.

23

#### III. Research Questions

As stated in the introduction, the purpose of this study was to document inclusion. exemption, and accommodation policies related to English language learners in state assessment programs. In order to obtain this information, we collected information from state policy documents in four areas: inclusion/exemption policies, accommodation policies, score reporting, and alternate assessments. Research questions for each area are as follows.

#### Inclusion/Exemption Policies

- 1) How do states define and identify ELLs?
- 2) Which and how many states have developed inclusion/exemption policies?
- 3) Which and how many states have established a time limit on the number of years that an ELL may be exempted from taking state assessments?
- 4) In cases where exemption is allowed, how long may ELLs be exempted from taking state assessments?
- 5) What criteria do states establish to determine whether an ELL should be exempted from participating in the state assessment program?
- 6) Do states specify who should make the decision to exempt a student from participating in the state assessment?
- 7) If yes, whom do they specify should make the decision?

#### Accommodation Policies

- 8) Which and how many states have developed policies on the use of accommodations with ELLs?
- 9) Which and how many states have established criteria to determine whether an ELL should receive accommodations?
- 10) What criteria do states use to determine whether an ELL should accommodations?

- 11) How many states specify who should determine whether an ELL should receive accommodations?
- 12) Who do states specify should determine ELL should whether an receive accommodations?
- 13) Which accommodations are allowed by states for ELLs?
- 14) Which accommodations are prohibited by states for ELLs?

#### Score Reporting

15) What impact, if any, does the use of accommodations have on the inclusion of ELL test scores on state, district, and school totals?

#### Alternate Assessments

- 16) Are ELLs permitted to take alternate assessments?
- 17) Do states specify which measures are acceptable?
- 18) What kinds of alternate assessments are used by states?

Prior to collecting state policies, we determined that the answers to these questions would permit us to more broadly evaluate the qualitative aspects of state policies. In particular, after gathering such data, we wanted to be able to evaluate how effectively state policies address the needs of ELLs.

#### IV. Methodology

This study is unique in that, unlike previous studies of ELL inclusion and accommodation policies (Rivera, et. al., 1997; CCSSO, 1997), it is based on primary instead of secondary sources. Through their Annual Survey of State Student Assessment Programs (SSAP), the Council of Chief State School Officers (CCSSO) annually compiles data similar in scope to that collected for this study. Though both the CCSSO survey and this policy analysis report on similar information, there is a significant difference in the way the data were gathered. Whereas the CCSSO relies on state assessment directors to complete a survey instrument, the information in this study is the result of an analysis of state documents submitted directly by the states. The consistent application of a common schema to analyzing and reporting state policies helps ensure the reliability of the findings and the validity of the conclusions in this study.

The use of primary sources is important for a variety of reasons. First, if the information collected and reported in a study is to be believable, it is important that it be verified. Second, sometimes researchers confuse the existence of certain practices with formally Although certain practices stated policy. may exist, their presence may not apply throughout a state. Third, sometimes guidelines are conveved by word of mouth. However, policy disseminated orally may be implemented inconsistently. On the other hand, written guidelines that are distributed have the force of policy and are much more likely to be implemented in a relatively uniform way. Fourth, when individuals report their policies, they do so in their own terms. When a single researcher or research team reports policies, terms are consistently and uniformly applied over all documents. This facilitates improved comparisons across states.

Our methods involved an analysis of state policy documents as opposed to self-reported data from state officials. After studying and summarizing the policies based on actual documents, we requested that state officials verify our summary of their state policies. In keeping with our

focus on written policies, any changes to be made to a state report had to be supported by documentation.

#### Collection of Source Documents

For this study, our first step was to collect state policies from the Council of Chief State School Officers (CCSSO) and from state web sites in order to learn about the most recent policies concerned with the inclusion, exemption and accommodation of ELLs in state assessment systems. We found that state web sites often did not contain the latest version of the state policy; therefore, we used only the hard copy policy documents sent to us by the states. We also found that CCSSO policies and data were typically two to three years old.

Because updated policies were not available for all states, we requested the most current documentation of state assessment policies for ELLs available. This request went out to state Title VII Bilingual and/or ESL Directors. In states where the Bilingual/ESL Director position was in transition, the request was made directly to the state assessment director.

The request was sent in May 1999. The packet sent included two letters, one from Charlene Rivera (the study's principal investigator) explaining the project and asking for participation, and another letter from Delia Pompa (director of OBEMLA) that emphasized the importance of the study. The packet also included a listing of the written materials to be sent. (A copy of the information in this packet can be found in Appendix A.) Information requested included the following:

- The state assessment handbook which includes the policy for exempting, assessing, and accommodating ELLs;
- Any state assessment policy memorandum applicable to and not included in the state assessment handbook;
- Any guidance the state provides to districts, schools, or test administrators regarding the implementation of policies

for exempting, including, or accommodating ELLs; and

 Any user-friendly documents the state had produced to help districts and schools implement state assessment policies for ELLs.

Extensive follow-up contacts were made to SEA Title VII directors of states that did not respond by the May 21 deadline, with the result that nearly all states' documents were received by July 1999.

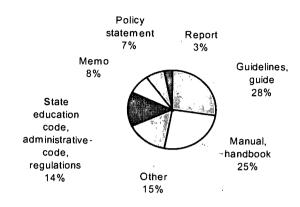

The number of documents sent by each state ranged from 0 to 37. Two hundred thirty documents were supplied by the states, totaling more than 6000 pages. As documents arrived, we skimmed their content and classified them as being very useful, somewhat useful, or irrelevant to the questions the study was designed to address. Of the 230 documents we received, 131 (57%) were not relevant to the study or contained either duplicate or outdated information. The remaining 99 documents were categorized as being either somewhat useful (75 documents) or very useful (24 documents).

#### Classification of Documents

The type of document used to convey their policies varies from state to state. Documents ranged from one-page memos to test manuals as long as 182 pages. The pie chart in Figure 1 above divides these documents by type. The most common document types include guides, guidelines, manuals, and handbooks. They account for 53% of the relevant documents. Additional document types in order of frequency were state education codes, administrative codes and regulations (14%); memos (8%); policy statements (7%); and reports (3%). The remaining category, which includes 15% of the documents, is labeled "other." The fact that this category is relatively large indicates the variety of documents that states use to explain their policies. Examples of "other" document types are newsletters, bulletins, letters and teacher oriented handouts.

Once we had identified documents with relevant information, we began classifying

Figure 1. Types of relevant documents submitted by SEAs by number and percent (N=99 documents)

the kinds of information that states addressed in their policies.

The topics that these documents addressed are found in Figure 2, along with the percentage for each topic. Of the relevant documents, 64 had information related to the inclusion of ELLs. Accommodations were addressed in 51 of these documents. The following related information was also found to be included, but in fewer documents: definition of an LEP student (41 documents), alternate assessments (26 documents), score reporting (21)documents), and scoring (16 documents).

#### **Analysis of Documents**

The policy analysis began with the examination of documents from a sample of states that were believed to represent the range of LEP assessment conditions found throughout the United States.

First, an individual state report -- State Inclusion and Accommodation Policies for LEP Students (henceforth referred to as the "state report") -- was developed to document the policies for each state. The report format guided project staff to look for certain information in state documents. Data entered into the individual state report automatically went into a database which allows information across states to be summarized, compared, and synthesized.

Individual state reports are found in Appendix D.

Section one of the report contains eight items. The eight items provide an overview of the state policies regarding inclusion. exemption, accommodation, score reporting, and alternate assessments.

Section two of the report focuses on inclusion policies. It contains three items. The first is the operational definition used by the state to identify ELLs.5 This was not among the initial areas of focus of the analysis, but came to be a matter of issue as the researchers noted the wide variation in definitions contained in the documents submitted. The other two items focus on the inclusion/exemption decision-making process; one focuses on the criteria used in making the decision, while the other focuses on the person(s) designated to make the decision.

Section three of the report focuses on accommodation policies. It contains three The first two items address the accommodation decision-making process. Similar to section two, one item focuses on the criteria used in making the decision, while the other focuses on the person(s) designated to make the decision.

The third item provides various types of information. It identifies the extent to which state allows and/or prohibits the accommodations, and describes the degree to which any one accommodation is allowed and/or prohibited. This item also identifies score reporting policies for accommodations.

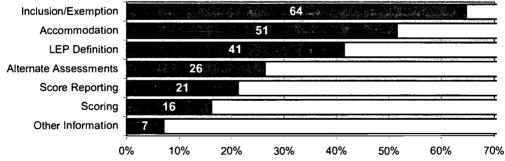

Finally, section four lists the documents provided. Each document's title, publication date, document type, number of pages, content focus, and degree of usefulness were recorded on this page.<sup>6</sup>

The state report was refined through a process of document review. Reports from a small number of states were generated. These reports were reviewed by project staff and by an external advisor (Diane August). As a result of this review process, revisions were made to the format of the state report.

Data and explanatory information for each state were then entered into the revised state reports. As each state report was completed, a second researcher reviewed it for accuracy and intelligibility.

In August 1999, individual state reports were generated and sent to the appropriate SEA Title VII or State Assessment Director with a request that he or she check the report for accuracy. (See Appendix A for a copy of

Figure 2. Topics addressed in relevant state documents by number and percent of states (N=99 documents)

 $<sup>^{\</sup>mbox{\scriptsize 5}}$  It should be noted that information requested from the states did not specifically include the operational definition of ELL used in the state.

Appendix B lists the relevant documentation that was submitted by each state, providing each document's title, type, and date of publication. Further information about these documents can be found in Appendix D in Section 4 of the individual state reports.

this request.) If a correction was necessary, the SEA Title VII director was asked to indicate the location of the information in the state policy that was the basis for the change in the analysis, or to supply the state document, if a document had not been previously submitted. Only changes supported by documentation were made to the state reports.

By October 8, 1999, 24 states had checked their reports and returned them. Ten of these states had made changes on the report but had not submitted the corresponding state documentation. Followup email was sent to remind the Title VII director that documentation was needed. Six of the ten states responded to this request. Subsequent to the October 8 deadline, follow-up phone calls were made to the 25 states that had not yet responded to our email request or our letter requesting that they verify the report for their state.

By November 1, 39 states had responded. Of these, 13 state reports needed no changes (AL, AZ, CA, KS, MI, MN, MO, MS, OK, PA, WI, WV, and WY), 16 needed minor changes (DC, ID, IL, IN, LA, MD, ME, MA, MT, NH, NJ, NM, NC, VA, VT, and WA), and 10 were reported by the Title VII director to need changes, but appropriate documents were not submitted (AK, CT, DE, GA, HI, NV, NY, OH, OR, and UT). No response was submitted from the remaining ten states.

After responses and any accompanying additional documentation were received from Title VII directors, all available documentation was reviewed, and the state report was revised as appropriate.

Early February 2000, state reports were sent to State Assessment Directors for review. As with previous appeals, each packet included a letter from the principal investigator which explained the nature of the study and asked for input regarding the state report and relevant documentation to support the state assessment director's

revisions. Also included was a form that asked the individual evaluating the report to indicate whether any changes were to be made and to provide contact information and a report of LEP policies specific to each state.

Three weeks after the initial request for reviews, requests were sent out to states yet to respond (AZ, CA, CO, CT, DC, GA, HI, ID, ME, MN, MO, ND, NJ, NM, NY, OR, RI, TN, TX, UT, VT, VA, and WY). The material sent out to these outstanding states was identical to that sent out previously, with the exception of the letter, which served as a reminder notice to reinforce return of the reports. All requests were sent to the states by fax on the same day, February 24, 2000.

By mid-March 2000, 35 states had checked their state reports and returned them (AL, AK, AR, AZ, CA, CT, DE, FL, GA, IL, KS, KY, LA, MA, MD, ME, NI, MN, MS, MT, NC, NH, NJ, NV, NY, OH, OK, PA, SC, SD, TX, VA, WA, WI, and WY).

Twenty-three of these states indicated that revisions were to be made to their state reports. However, only 18 states submitted relevant documentation.

In mid-March 2000, the remaining states were contacted in order to obtain supporting materials. Six of those states responded by sending in relevant documentation or providing clarification of comments on their state reports.

Also interesting to note is that out of the ten states with the highest ELL enrollment (AZ, CA, FL, IL, MA, NJ, NM, NY, TX, and WA), nine reviewed their reports and returned them.

The next section of this report provides an analysis of state inclusion, exemption, and accommodation policies related to ELLs for school year 1998-1999. The analysis is based on information entered in state reports and analyzed across all states in the database.

#### V. Results

#### Identifying ELLs

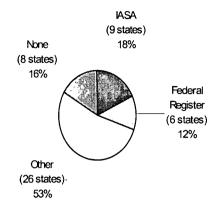

Before analyzing policies regarding the inclusion, exemption and accommodation of ELLs, we consider how states identify the population for whom these policies are designed. Each state is responsible for identifying its students with special needs, in this case, students with limited English proficiency (LEP). The identification of such students is substantially influenced by the state's definition of LEP.

Our review indicates that 41 states provide a definition of limited English proficiency in their assessment policy documents. Eight states (AZ, CA, ME, OH, OR, RI, TN, and VT) have policies that do not include a definition of LEP, although such a definition may exist in other state documents, which were not provided.

As shown in Figure 3, the most commonly used definition of limited English proficiency is used by nine states (DE, KY, LA, MS, ND, OK, SD, VA, and WY). Based on the definition found in the IASA legislation,<sup>7</sup> "A limited English proficient individual is one who:

- a) was not born in the United States or whose native language is a language other than English and comes from an environment where a language other than English is dominant; or
- b) is a Native American, or Alaska Native, or a native resident of the outlying areas and comes from an environment where a language other than English has had a significant impact on such individual's level of English proficiency; or
- c) is migratory and whose native language is other than English and comes from an environment where a language other than English is dominant; and
- d) who has sufficient difficulty speaking, reading, writing, or understanding the English language, and whose difficulties may deny such an individual the opportunity

Figure 3. ELL definition used by each state (N=49 states with statewide assessments)

to learn successfully in classrooms where the language of instruction is English, or to participate fully in society."

Another similar definition used by six states (AL, AR, FL, MT, NC, and WV) is a modification of this definition that these states have attributed to the Federal Register. This definition has essentially the same wording as the IASA definition, but it does not refer to migrant students. Because this definition is not an exact match of the definition that is found in the current IASA legislation and the states that use it refer to it as coming from the Federal Register, the definition is referred to in this report as the Federal Register definition.

The definition of limited English proficiency provided by 26 states differs widely in content (AK, CO, CT, DC, GA, HI, ID, IL, IN, KS, MA, MD, MI, MN, MO, NH, NJ, NM, NV, NY, PA, SC, TX, UT, WA, and WI). The range is from definitions that are the same or similar to those found in the 1994 IASA and the Federal Register to definitions found in legislation prior to IASA. For example, Pennsylvania's policy states that LEP students are "students who do not understand, speak, read or write English," and Missouri's policy states that they are "students assessed as having English skills below their age appropriate grade level."

.<sup>17</sup> 2:5

#### Inclusion/Exemption Policies

As indicated in IASA8, Section 1111, states are required to develop policies that address inclusion of ELLs in their state assessment programs by the 2000-2001 school year. In the state report, Section 1.1 indicates whether a state has a policy regarding the inclusion/exemption of ELLs in state assessments.

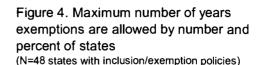

According to the documents submitted by each state and the District of Columbia, 48 out of 51 states (94%) have policies that address the inclusion or exemption of ELLs in state assessments. Iowa and Nebraska not offer statewide assessments: therefore, they have no relevant policy statements and are not included in the state Alaska does have statewide counts. assessments, yet it does not have an ELL inclusion or exemption policy.

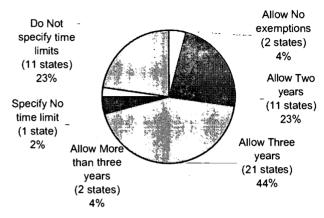

Of the 48 states with inclusion or exemption policies, 46 states allow exemptions from the regular assessment. Of these 46, six states require that students take an alternate assessment (AR, IL, MT, NM, TX, and WI). The remaining two states, California and Ohio, require all students to take the state assessments, regardless of background or level of English language proficiency.

#### Time Limits

As indicated in the Review of Literature. states often specify the number of years during which an ELL may be exempted from participation in the assessment program.

Section 1.2 in the state report indicates whether ELLs are allowed exemptions for a specific amount of time. Figure 4 illustrates the number of states that have inclusion or exemption policies and the maximum number of years that exemptions apply, if they are allowed. In some states, the time limit is not explicitly identified. Instead, the policy may specify that a student may be exempted for one administration of the test. In effect, this exempts the student until (s)he reaches the next grade at which there is a statewide test, which can range from one to four years.

As shown in Figure 4, 35 of the 46 states that allow exemptions have policies regarding exemption time limits. The maximum period of exemption from participating in statewide assessments varies from two years to more than three years. The greatest number of states (21) allow a maximum exemption of three years, while 11 states allow a maximum two-year exemption.

It is possible for a student to receive an exemption for more than three years in two states (NH and TN). In Tennessee, though state documents do not specify the grades in which students are tested, state policies indicate that testing for ELLs can be postponed until later in the student's high school years. In New Hampshire, a student exempted from testing in grade six would not encounter statewide tests until grade ten, a period of four years.

One state -- Hawaii -- specifies that there is no time limit on exemptions, and that a student's level of English language proficiency supercedes any time considerations. Eleven states do not address the issue of time limits on exemptions.

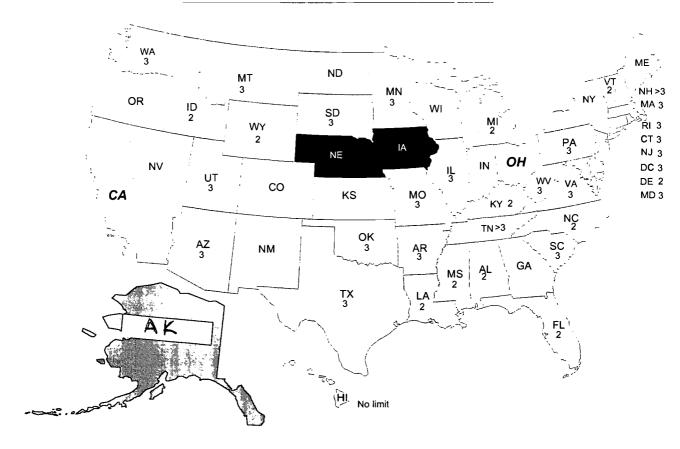

Figure 5 provides a map of the United States that summarizes the above information. It identifies the states with inclusion/exemption policies and indicates their time limits for allowing exemptions.

<sup>&</sup>lt;sup>8</sup> United States Congress (1994)

Figure 5. Inclusion/Exemption Policy Overview

- Number in each state represents maximum number of years an ELL may be exempted from state mandated assessments; N=34
- ♦ States with numbers allow exemptions and specify a time limit; Hawaii's policy specifies that there is no time limit for exemptions
- ◆ States with no number specify no time limit for exemptions; N=11
- ◆ States in bold (CA and OH) allow no exemptions; N=2

#### Inclusion/Exemption Criteria

Inclusion or exemption policies in each state are based on specific criteria. These criteria can take many forms. The state report, Section 2.10, indicates the criteria that are used to determine if individual ELLs are to be included in or exempted from the state assessment program.

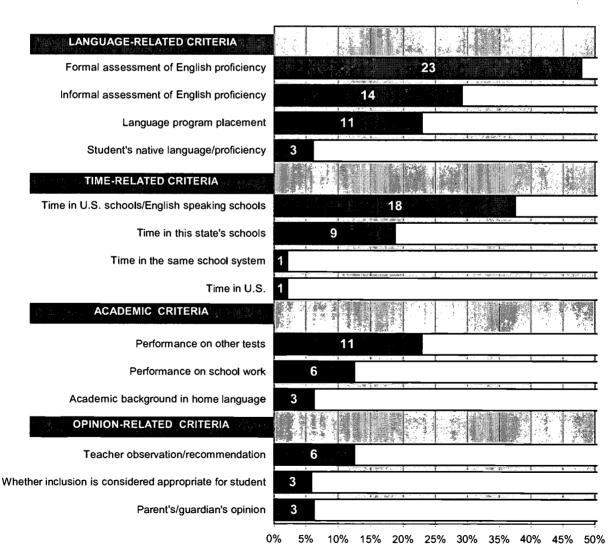

Figure 6 summarizes the criteria used by states. Table 1 provides state-by-state inclusion/exemption criteria. Only three states with inclusion or exemption policies do not address criteria (CA, ME, and OH). California and Ohio omit criteria because they do not allow exemptions. In Maine, exemptions are allowed, yet state policy

does not specify the criteria schools should use in making decisions. The remaining 45 states have policies that outline criteria for inclusion/exemption decisions.

As Figure 6 illustrates, the most common criteria are those related to English language assessment and time spent in an English-medium environment.

Formal assessment of English proficiency is the most widely used criterion in considering ELLs for exemption. Table 1 identifies the 23 states that consider this criterion (AL, CO, DC, DE, GA, HI, IL, IN, KS, MD, MS, NC, ND, NJ, NM, NV, OR, SC, VA, WA.

Figure 6. Inclusion criteria by number and percent of states (N=48 states with inclusion/exemption criteria)

Note: Some states use multiple criteria; therefore, the total of the bar graphs is greater than 48.

WI, WV, and WY). Formal assessment means administering a standardized test of English language proficiency to the student. The test administered varies by state, with some states specifying an acceptable test or tests, and other states not specifying the test.

Closely related to the most popular criterion, formal assessment of English proficiency is the use of informal English assessments, which are also relatively popular. It is considered by 14 states (AL, AR, CO, DE, IN, MO, MS, NH, RI, TX, VA, WI, WV, and WY).

Another criterion related to English proficiency is whether or not a student is receiving special language services (such as bilingual education or ESL instruction). This criterion, called "Program Placement" in Figure 6 and throughout this report, is considered by 11 states (CO, CT, FL, GA, HI, IL, MA, NJ, NV, SC, and TX).

Other widely used criteria are related to the amount of time a student has spent in U.S. schools or English speaking schools. Eighteen states consider this criterion (DC, ID, KY, LA, MA, MI, MN, MT, NJ, PA, SC, SD, TX, UT, VT, WA, WV, and WY). Other time-related criteria used to determine exemption status are 1) time spent in the state's schools, which is considered by 9 states (AL, AR, AZ, DE, IL, MD, MO, MS, and OK), 2) time spent in the U.S., which is considered by Minnesota, and 3) time spent in the same school system, which is considered by North Carolina.

Several states consider factors related to the student's academic abilities. Performance on other tests is considered by 11 states (AL, AR, MS, ND, NY, TN, TX, VA, VT, WV, and WY). Performance on schoolwork is considered by six states (AL, AR, MS, TX, VA, and WY). Teacher's observation and/or recommendation are considered by six states (AL, AR, DE, MD, WV, and WY). Policies in three states consider a student's academic preparation in the home language (VA, WV, and WY). In these three states, a student's strong academic background in the content areas included in the state's assessment program would support including the student in the assessment program rather than exempting him/her.

Another factor addressed in some state policies is the opinion of the individuals involved in making the exemption decision. This includes teacher judgment which Alabama, Arkansas and Delaware consider. In addition, a few states (MI, MS, and OR) have policies that explicitly state that the opinion of the student's parent or guardian should be considered, especially if the parent, guardian or student is opposed to including the student in the assessment. Three states refer to such a decision in broad terms. Georgia states that exemption is based on whether it is in the student's best interest. Missouri states that inclusion is appropriate when it provides instructionally useful information, and Virginia refers to the appropriateness of inclusion for the student.

Three states partially base their decisions on the student's native language (MA, OR, and TX). In all three states, if the student's native language is Spanish, there is a translated test available. (In addition, Oregon is developing tests in Russian.)

As shown on Table 1, the majority of states base their decision to exempt ELLs from state assessments on only one or two criteria. In fact, 17 states use only one criterion (AZ, CT, FL, ID, KS, KY, LA, MT, NH, NM, NY, OK, PA, RI, SD, TN, and UT), and 11 states use two criteria (DC, HI, IN, MI, MN, NC, ND, NV, VT, WA, and WI). There are 17 states that use more than two criteria. More than half of these states (9) use three criteria (CO, GA, IL, MA, MD, MO, NJ, OR, and SC). The others (8 states) use from four to seven criteria (AL, AR, DE, MS, TX, VA, WV, and WY).

The most common sole criterion is time spent in U.S. schools or English speaking schools. Of the 17 one-criterion states, seven use only this criterion (ID, KY, LA, MT, PA, SD, and UT). If we add the criterion of time spent in the state's schools, two additional states use time as their sole criterion (AZ and OK).

The remaining eight single criterion states use a variety of indicators: informal assessment of English proficiency (NH and

5 50 D.C

RI), formal assessment of English proficiency (KS and NM), placement in a special language program (CT and FL), performance on other tests (NY), and performance on a subtest of the actual state test (TN).

The 11 states that use two criteria are more likely to focus on English language proficiency than time-related criteria. Eight states consider formal assessment of English proficiency as one of their criteria (DC, HI, IN, NV, NC, ND, WA, and WI). The second criterion recommended by each of these states varies widely.

Interestingly, the three remaining two-criterion states do not include formal English assessment as one of their criteria, but do include time spent in U.S. schools or English speaking schools (MI, MN, and VT). There are three other two-criterion states that consider a time-related factor (DC, NC, and WA). In fact, these three states are the only two-criterion states that combine formal assessment of English with a time-related criterion. The District of Columbia and Washington focus on time spent in U.S. schools or English speaking schools. North Carolina focuses on time spent in the same school system.

Of the 17 states that consider more than two criteria, all but four include both time and proficiency criteria (CO, GA, OR, and VA). These four states do not consider time-related criteria.

In summary, the trend is for states to consider one or two criteria, usually focusing on time factors or English proficiency factors. If only one criterion is used, the preference is for time-related criteria, which nine states use (AZ, ID, KY, LA, MT, OK, PA. SD. and UT) rather than proficiencyrelated criteria, which four states use (KS, NH, NM, and RI). In contrast, when two criteria are used, more states include proficiency-related criteria (HI, IN, NV, ND, OR, and WI) than time-related criteria (MI, MN, and VT). Three states specify both proficiency and time as criteria (DC, NC, and WA). In states that consider more than two criteria, both language proficiency and time are used in all but four cases (CO, GA, OR, and VA). In each of these states, timerelated criteria are not considered.

Finally, criteria related to academic factors (performance on other tests, teacher's observation and/or recommendation, academic background in home language and performance on school work) are among the criteria least often considered.

35

#### Inclusion/Exemption Decision-Makers

Decisions whether to include or exempt individual students must be made by someone. In the individual state reports, Section 2.9 indicates the person(s) designated by the state to make the inclusion/exemption decision.

Individuals who participate in the inclusion or exemption decision-making process in the 48 states with relevant policies are shown in Figure 7. Table 2 identifies the decision-makers in each state.

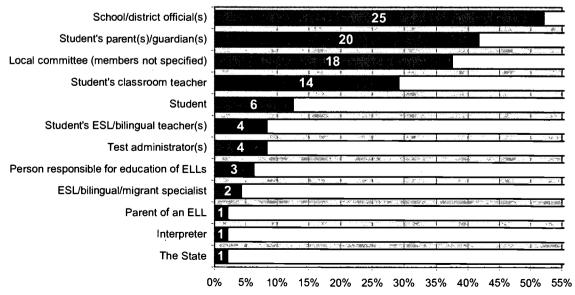

In summary, nine of the 48 states do not make any recommendations regarding should make the participation who decision. (Two of these states, California and Ohio, do not allow exemptions.) Of the remaining 39 states, school or district officials (25 states) and parents or guardians (20 states) play an important role in this process, participating as decision-makers in over 40% of the states.

Classroom teachers are mentioned in state documents а little less frequently. Fourteen explicitly name the student's classroom teacher as a decision-maker (DC, DE, MD, ME, MN, MS, NH, NV, OR, TN, UT, VA, WA, and WV). ESL/bilingual teachers are only mentioned explicitly in four states (DC, DE, LA, and MS). Other language professionals are mentioned by four states (TX, VA, WA, and WV). Although the participation of teachers in this decision-making process, especially ESL/bilingual teachers appears low, it may actually be higher. Eighteen states depend on a local committee comprised of unidentified members make to inclusion/exemption decision. The fact that state policies use such terms as the "student's academic team" or the "LEP committee" suggests that more ESL/bilingual teachers are actually involved. In Texas, the state policy identifies the specific members of the Language Proficiency Assessment Committee (LPAC).

Only a handful of state policies incorporate the student and test administrators in the decision-making process. Six states allow the student to participate in the decisionmaking process (GA, MD, MI, MS, OR, and TN). Four states mention the participation of test administrators (ID, LA, MS, and NM).

In Hawaii, the decision is determined solely on the basis of the state's policy, which specifies that a student must earn a specific score on a specific English language achievement test in order to be included in state tests.

Figure 7. Inclusion/exemption decision-makers by number and percent of states (N=48 states with inclusion/exemption policies)

Note: Some states have multiple decision-makers; therefore, the total of the bar graphs is greater than 48.

24

In summary, state policies indicate that, with the exception of Hawaii, the inclusion or exemption decision is the responsibility of a team of individuals. In many states, however, it is unclear who participates on this team. As explained, 18 states mention

local committees without specifying the members. Moreover, many of the states that mention school/district officials do not provide specific detail. In fact, three of these states rely solely on these unnamed officials (IN, NY, and WY).

## **Accommodation Policies**

The use of accommodations is central to promoting the meaningful inclusion of ELLs in state assessments. In order to use accommodations appropriately, factors must be considered. First of all. each state must consider the extent to which it will allow accommodations. those states that choose to allow accommodations on some or all components of its assessment system, the next decision involves identifying which accommodations are deemed most appropriate. At this point, each state must also consider what effect, if any, the use of individual accommodations will have on its score reporting practices. Finally, state policy should indicate how decisions would be made for each individual student, in other words. who will make accommodation decisions and what criteria they will base their decisions on.

Our policy analysis covers these factors, and begins by answering the first question: to what extent are accommodations allowed and/or prohibited in each state's policy? This information can be found in Sections 1.4 and 1.5 of the state reports.

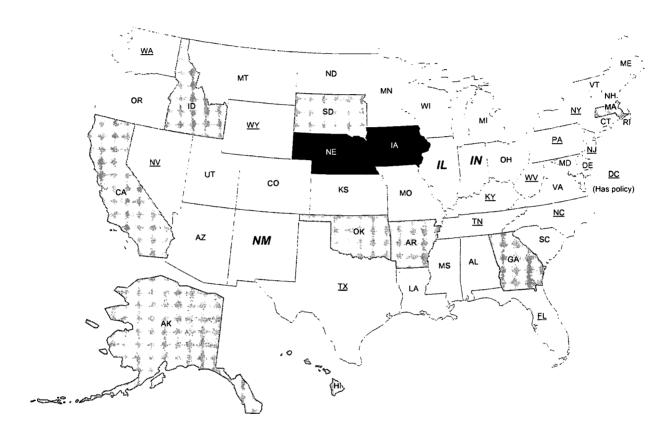

Of the 48 states with an inclusion or exemption policy, as shown in Figure 8, 40 have a policy regarding accommodations in state assessments for ELLs. Thirty-seven of these states allow accommodations on at least one test component. Thirteen of the states that allow accommodations also have prohibit policies that specific accommodations from being offered (DC. FL, KY, NC, NJ, NV, NY, PA, TN, TX, WA, WV, and WY). Three states (IL, IN, and NM) do not allow any accommodations. In addition, Illinois and Indiana make a point of prohibiting the translation of tests. New Mexico, on the other hand, allows test translation on one of its components.5

The fact that these three states address test translation independently suggest that they view test translation as something different from an accommodation.

Figure 8. Accommodation Policy Overview

- ◆ States in bold allow no accommodations; N=3 (IL, IN and NM)
- Remaining states with a policy allow accommodations; N=37
- Underlined states prohibit at least one (but not all) accommodation(s) N=13 (DC, FL, KY, NC, NJ, NV, NY, PA, TN, TX, WA, WV, and WY)
- New Mexico and Massachusetts translate tests, although New Mexico does not allow accommodations and Massachusetts, has no accommodation policy; Massachusetts also has untimed tests

#### Accommodation Criteria

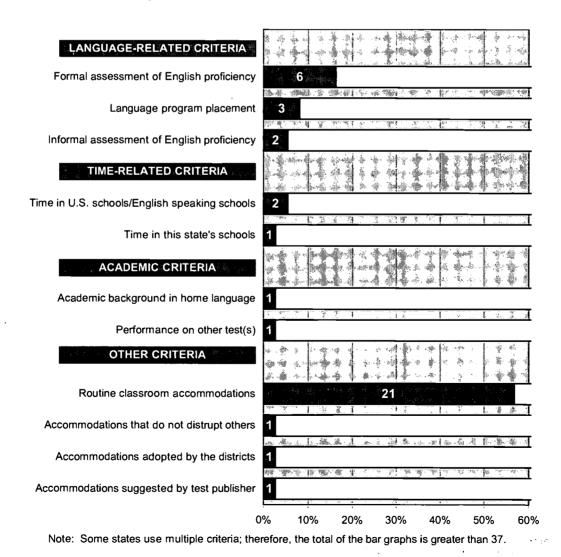

Decisions regarding the provision of accommodations to individual students must be based on some criteria. The response to Section 3.12 in the state report indicates whether the state has established criteria for determining if accommodations should be provided, and what those criteria are in each state.

Twenty-six of the 37 states that allow accommodations specify the criteria on which decisions are to be based. Figure 9 summarizes these criteria across all states. Table 3 provides state-by-state details regarding accommodation criteria.

The most widespread criterion involves consideration of the student's routine classroom accommodations. Of the 37 states that allow accommodations, 21 states use this criterion (AL, CO, DC, KS, KY, LA, MD, ME, MN, MS, MT, NC, NH, RI, TX, VA, VT, WA, WI, WV, and WY); in 13 of these states, this is the sole criterion considered (AL, CO, KS, LA, ME, MN, MS, NC, RI, TX, VA, WA, and WY). Other criteria are used in a handful of states.

Formal assessment of English proficiency (which is discussed on pages 20 and 22) is a factor in six states (DC, KY, MD, MT, SC, and WI). Criteria that are considered by three states or fewer include: program

Figure 9. Accommodation criteria by number and percent of states (N=37 states that allow accommodations)

placement (which is discussed on page 22) is considered by three states (CT, NV, and SC); informal assessment of English proficiency is considered by two states (NH and WV); academic background in home language (which is discussed on page 22) is considered by one state (MT); time in the state's schools is considered by one state (DE); and performance on other tests is considered by one state (VT).

Utah specifies that accommodation criteria be determined by the school district. Vermont considers the suggestions of the test publisher. Finally, Nevada considers whether the accommodation might disrupt others taking the test.

As shown in Table 3, states vary in the number of criteria used. Sixteen states consider only one criterion (AL, CO, CT, DE, KS, LA, ME, MN, MS, NC, RI, TX, UT, VA, WA, and WY), six states consider two criteria (DC, KY, MD, NH, WI, and WV), one state considers three criteria (SC), and one state considers four criteria (MT). It is unclear how many criteria are considered by two states because they do not specify their criteria for accommodation decision-making in their policy documents (NV and VT).

Table 3. Accommodation criteria by state (Y=Yes, the state considers given criterion.)

#### Accommodation decision-makers

Section 3.11 in the state report identifies who makes the decision concerning the provision of accommodations to individual students. Of the 37 states that allow accommodations, 23 states recommend accommodation decision-makers, as illustrated in Figure 10 and shown in Table 4 (AL, AZ, CO, KS, KY, LA, MD, ME, MN, MS, MT, NC, NH, NY, OR, RI, TX, VA, VT, WA, WI, WV, and WY).

In 14 states, the accommodation decision-making team most frequently includes the student's classroom teacher(s) (CO, KS, MD, ME, MN, MS, NH, NY, OR, RI, VA, VT, WI, and WV). Parent(s)/guardian(s), may be included in nine states (AL, MD, ME, MN, NH, OR, VA, VT, and WV).

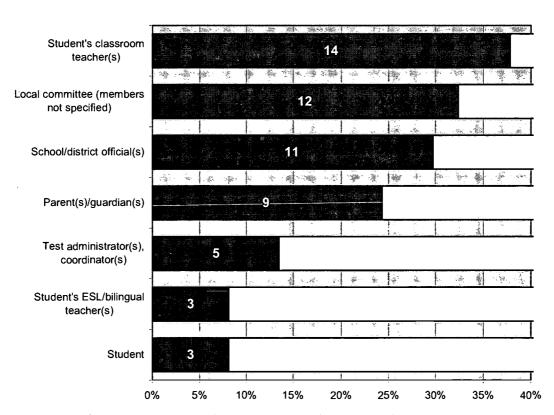

Similar to the inclusion decision-making process, the accommodation decision-making process involves a team of individuals, some of whom are not identified explicitly in state policy.

Twelve states mention a local committee without specifying its members (AL, KY, MD, ME, MT, NC, NH, OR, RI, VT, WA, and WI). Likewise, school officials, who form a relatively broad category, are included in eleven states (AZ, LA, ME, MN, MS, NH, NY, TX, VA, WV, and WY).

Six states involve ESL professionals in the decision-making process (KS, LA, MS, NC, VA, and WV).

Only a few states explicitly state that the student may be involved in the process (MD, OR, and VT).

Figure 10. Accommodation decision-makers by number and percent of states (N=37 states that allow accommodations)

Note: Some states use multiple decision-makers; therefore, the total of the bar graphs is greater than 37.

### Allowance of Accommodations

When state policies address individual accommodations, they provide one or more of the following pieces of information: whether the accommodation is allowed on a specific test component, whether it is prohibited on a specific test component, and whether its use affects score reporting.

For the purposes of this report, test component refers to any section or subsection of a test that is part of a state's entire assessment program. It may refer to a single test, which may or may not be given at different grade levels (for example, the Florida Writes! assessment, which tests writing at grades 4, 8, and 10), a battery of tests (for example, the Connecticut Mastery Test, which tests reading, writing and mathematics at grades 4, 6, and 8), or a subtest in a battery (for example, one of the subject tests of the Connecticut Mastery Test). In this section, we discuss which accommodations are allowed and which accommodations are prohibited. next section, we discuss how the use of accommodations affects score reporting.

In each case, the important factor is that the state has identified the particular test as a component of its assessment program. and has provided accommodation policies particular to that component. In New Hampshire, for example, oral reading of questions in English is a prohibited accommodation on the reading and English language arts sections of the New Hampshire Educational Improvement and Assessment Program. Oral reading is allowed on the other non-language arts sections, such as math. In our study, therefore, we report that oral reading is allowed on some test components.

State policies address dozens of different accommodations. As mentioned in the review of literature and discussed in the next section, these accommodations have traditionally been classified based on a system that was first applied to accommodations used for special education. Within this system, accommodations are typically classified as: presentation format accommodations, response format accommodations, setting

accommodations, timing/scheduling accommodations, and "other" accommodations.

We first applied this classification scheme to analyze the state policies. Next, to explore how the specific assessment needs of ELLs were being addressed, we created a new classification scheme designed especially with ELLs in mind. This classification scheme is based on linguistic considerations. It categorizes accommodations into three groups: native language, English language, and non-linguistic accommodations.

Both the traditional and linguistic classification schemes are used to provide a clear understanding of current state policies for accommodating ELLs.

View from a Traditional Classification of Accommodations

The analysis of accommodations from the traditional classification scheme shows that states include accommodations that have varying degrees of acceptability. We classify the acceptability of an individual accommodation based on the number of states that allow it on all components, allow it on some components, or prohibit its use on all components.

Based on these criteria, Figure 11 provides a list of all individual accommodations allowed by the states, and indicates the number of states that allow each accommodation on all components, and the number of states that allow it on some components. As Figure 11 shows, the most popular accommodations are setting and timing/scheduling accommodations. Moreover, unlike accommodations in other categories, no state prohibits their use. By implication, these accommodations are considered by states to be the most acceptable accommodations.

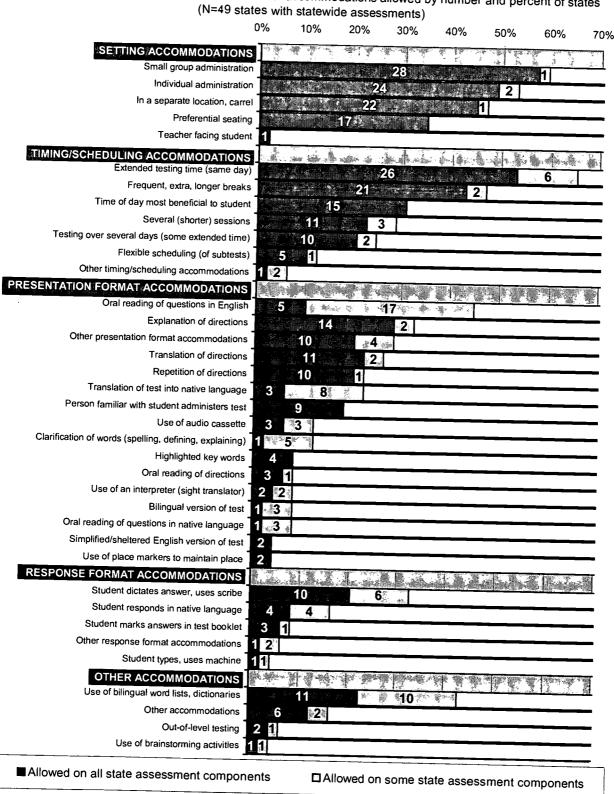

Figure 11. Traditional classification of individual accommodations allowed by number and percent of states (N=49 states with statewide assessments)

### Setting accommodation

Setting accommodations include practices that affect the environment in which the test is given. When setting accommodations are mentioned in state policy, they are usually allowed on all components of a state assessment program. Of the 37 states that allow accommodations, none prohibit any setting accommodations.

As shown in Table 5, three setting accommodations are allowed by a large number of states: 1) small group administration, which is allowed by 28 states on all components (AL, CT, DC, DE, KS, KY, LA, MD, ME, MI, MN, MO, MS, MT, ND, NH, NV, NY, OR, RI, SC, TN, TX, VA. WA. WI. WV. and WY) and by 1 state on some components (AZ), 2) individual administration, which is allowed by 24 states on all components (AL, CT, DE, KS, LA, ME, MI, MN, MO, MS, ND, NH, NV, NY, OR, RI, SC, TN, TX, VA, VT, WA, WV, and WY) and by 2 states on some components (AZ and MD), 3) administration in a separate location or carrel, which is allowed by 22 states on all components (AL, CT, FL, KS, MD, ME, MI, MN, MS, NC, ND, NH, NJ, NV, NY, OR, PA, RI, TX, VA, WA, and WY) and by one state on some components (AZ).

Another fairly popular settina accommodation is preferential seating, which is allowed by 17 states on all test components (AL, DC, DE, KS, MD, ME, MS, ND, NH, NV, OR, RI, TX, VA, WA, WI, and WV). This accommodation allows a student to sit in the front of the room. providing the student with the best opportunity for understanding directions given by the test administrator. For similar reasons, one state identifies one setting accommodation as making sure that the teacher is facing the student (NH).

# Timing/Scheduling accommodations

setting Similar to accommodations. timing/scheduling accommodations offered by many states, and no state prohibits their use. By far, the most popular timing/scheduling accommodation extending the test time on the same day. As shown in Table 6, extra time is allowed by 26 states on all components (CO, CT, DC, DE, LA, MA, MD, ME, MI, MN, MO, MT, NC, ND, NJ, NY, OH, OR, PA, RI, SC, TX, VT, WA, WI, and WV), and by 6 states on some components (AL, FL, MS, NV, VA, and WY). This accommodation is so acceptable that it may be allowed for all students taking the test, not just for those students with special needs. This is the case of Massachusetts, which has untimed tests.

Regarding restrictions applied to time extensions, Alabama, Nevada, and New Jersey specify a maximum amount of time allowable.

As shown in Table 6, four timing/scheduling accommodations are fairly popular: offering frequent, extra or longer breaks, which is allowed on all components by 21 states (CO, CT, DC, DE, KS, MD, ME, MI, MN, MS, ND, NH, OR, PA, RI, TX, VA, VT, WA, WI, and WV) and allowed by two states on some components (AL and WY), 2) choosing the time of day most beneficial to the student, which is allowed by 15 states on all components (AL, CO, MD, ME, MS, ND, NH, NV, OR, RI, VA, WA, WI, WV, and WY), 3) offering several (often shorter) sessions, which is allowed by 11 states on all components (CO, CT, DE, FL, ME, NC, ND, NH, OR, VA, and WV) and by 3 states on some components (AZ, MN, and TN), and 4) allowing testing over several days, which is allowed by 10 states on all components (DC, MD, ME, NC, ND, OR, RI, WA, WI, and WV) and by 2 states on some components (AZ and VA).

One timing/scheduling accommodations is less popular. Flexible scheduling of subtests is offered on all components in five states (DC, MT, ND, VA, and WV) and on some components in one state (RI).

\*\*Unspecified other accommodations. \*\*Group breaks, more than 20 minutes. \*\*\*Breaks during a subtest.

There appears to be less of a consensus regarding the use of the remaining accommodation types in the traditional classification, presentation format and response format accommodations. This is evidenced by the fact that fewer states allow these accommodations, as we have already seen in Figure 11; conversely, some states explicitly prohibit their use. (These prohibitions will be discussed in more detail in the following section.)

### Presentation format accommodations

Presentation format accommodations are the most numerous, accounting for nearly half of the accommodations. These are accommodations that affect the manner in which the assessment instrument is presented to the student.

The most popular presentation format accommodation is oral reading of questions in English. As shown in Table 7, five states allow this on all assessment components (DE, KY, ME, MI, and ND); 17 states allow this accommodation on some assessment components (AL, CO, FL, KS, MD, MO, MS, NC, NH, OR, RI, SC, VA, WA, WI, WV, and WY).

The next most popular presentation format accommodations can be grouped together based on the fact that they all involve the test directions. Explanation of directions is allowed on all components by 14 states (CT, DC, DE, KY, ME, MN, MT, NV, OR, SC, TX, VA, WA, and WV), and allowed on some components by two states (AZ and FL). It is notable that, in Minnesota, the explanation of directions is allowable before -- but not at -- the time of the test. Repetition of directions is allowed on all components by 10 states (CO, DC, DE, LA, MD, OR, SC, TX, WA, and WY), and on some components by one state (AZ). Translation of directions is allowed on all components by eleven states (MI, MN, MT, NJ, NV, OH, OR, PA, SC, TX, and WA), and on some components by two states (AL and AZ).

Nine states (AL, FL, LA, ME, MS, NH, SC, TN, and TX) allow a person familiar with the student to administer the test on all components.

Translation of the test into the native language is used by few states. As shown on Table 7, three states allow it on all components of the state assessment (DE, KY, and ME) and eight states allow it on some components (MN, NM, NY, OR, RI, TX, UT, and VT).

Similarly, Table 7 indicates that few states allow either bilingual versions of tests or simplified/sheltered English versions. Bilingual versions of tests are available in Spanish in four states (CO, MA, OR, and WY). Wyoming allows the use of bilingual tests on all components; the other states allow bilingual tests on some components. Simplified/sheltered English versions of tests are available in two states (KS and ME), where they are allowed on all tests.

Table 7 continues to illustrate this trend: the least used presentation format accommodations are those related to usage of the native language. Oral reading of questions in the native language is allowed on all tests by New York, and on some tests by Oregon, Rhode Island and Wyoming.

Table 7 shows that use of an interpreter or sight translator<sup>10</sup> is allowed on all components by Delaware and New Hampshire; it is allowed on some components by Ohio and Vermont.

A handful of states allow other presentation format accommodations related to making English more accessible. Clarification of words in English is allowed by one state (MT) on all components: it is allowed on some components by five states (AZ, CO, FL, NV, and WY). Use of audiocassettes is allowed on all components by three states (MT, ND, and VT), and on some components by three states (MD, MN, and RI). Oral reading of directions is allowed on all components by three states (CO, VA, and WV), and on some components by Wisconsin. Highlighting key words on the test to focus the student's attention on main ideas is allowed by four states (KS, ND, OR, and VA).

37 **4** 3

<sup>&</sup>lt;sup>10</sup> Sight translation is the act of orally rendering a document written in language A to language B. In the context of state assessment, sight translation involves rendering orally all or part of a test written in English into the student's native language.

## Response format accommodations

Response format accommodations affect how a student is allowed to respond to test items. These accommodations are similar to the presentation format accommodations in that their use is more limited than the setting and timing/scheduling accommodations. This category is different from presentation format accommodations in that it represents fewer accommodations, and these accommodations are less popular.

The most significant member of this category is an accommodation in which the student is able to dictate answers and/or use a scribe. Ten states allow this accommodation on all components (CO, KS, MD, MI, MO, MT, ND, OR, RI, and WI); six states allow it on some components (DE, ME, NH, VA, VT, and WY). Other response format accommodations include allowing the student to respond in the native language, which is allowed by four states on all components (KS, MT, ND, and OR), and by four states on some components (DE, MA, RI, and TX); allowing the student to mark answers in the test booklet is allowed by four states on at least one component (AL, MN, NC, and SC); and allowing the student to type or use a machine, is allowed on all components by Maryland and on some components by Alabama.

Notes for Table 8

- AL \*Student marks answers by machine.
- DE \*Scribe records student response on a writing prompt.
- KS \*Student dictates answers on tape for verbatim translation.
- MD \*Student types response for transcription by school personnel.
- ND \*Student tape records responses for later verbatim translation.
- VA \*Student responds verbally and teacher or proctor marks answer sheet.
- WY \*Words can be spelled for student providing written response

Total allowed	16	8	4	2	3

The four traditional categories do not account for all accommodations allowed by states, so a fifth category called *other accommodations* must be included.

According to Table 9, the most significant accommodation in this category is allowing the use of bilingual dictionaries or word lists. This accommodation is allowed on all tests by 11 states (FL, KY, LA, MD, ME, MI, MT, NC, NJ, OH, and WY) and on some components by ten states (AL, AZ, CO, DE, MS, NY, RI, SC, VA, and WA). One policy of note is that of Louisiana, where it is stipulated that an "English/Native Language dictionary (no definitions)" is allowed for all tests, while an "English/ Native Language dictionary" is allowed only for the written composition test.

Other accommodations include the use of out-of-level testing (administering a test below grade level) and the use of brainstorming activities such as creating solution maps and discussing in pairs. The former is allowed by Kansas, Montana and Vermont; the latter is allowed by Delaware and Vermont.

Considering the number of possible accommodations and the choices involved in determining the extent to which they should be offered, it is no surprise that state policies regarding which accommodations are allowable are so varied. Just as much (and perhaps more) can be learned about the states' attitudes toward ELL accommodations by considering the accommodations that are prohibited.

# Notes for Table 9

AL \*Unspecified other accommodations which need to be approved by the state Department of Education.

DE \*Students discuss/brainstorm in pairs during the prewriting part of the Writing test.

KY \*Use of grammar or spell-checking systems.

LA \*Bilingual dictionary, with definitions.

MD \*Those proposed by a Local Accountability Coordinator or LEP staff, and approved by MSDE Office and LEP staff.

MO \*Use of native language dictionary.

ND \*Special test preparation (not specified).

On-task/focusing prompts.

OR \*Use of an electronic translation device.

SC \*Alternative Holistic Score Scale.

VT Solution maps; Pre-conferencing.

WA \*Use of student created dictionaries.

<sup>\*</sup>Prohibits the use of all accommodations, and explicitly prohibits the use of translated tests.

# Prohibition of Accommodations

When discussing the use of accommodations, most state policies focus on enumerating the accommodations that are allowed. Some state policies, however, also include information about accommodations that are explicitly prohibited. As discussed earlier, the policies of three states (IL, IN, and NM), prohibit the use of all accommodations, and the policies of thirteen states prohibit the use of at least one accommodation (but not all) (DC, FL, KY, NC, NJ, NV, NY, PA, TN, TX, WA, WV, and WY). Table 10 provides state-by-state details regarding these prohibitions. Figure 12 gives a summary of these prohibitions based on the traditional classification of accommodations.

In the previous section we explained that presentation format, response format accommodations and other accommodations are not used as much as the setting and timing/scheduling accommodations. These are the

accommodations that some states explicitly prohibit.

The most popular presentation format accommodation, oral reading of questions in English, is prohibited by two states (PA and TN).

Less popular presentation format accommodations, those related to native language use, are also prohibited by some states. Translation of the test into the native language is explicitly prohibited by six states (DC, IL, IN, NJ, PA, and WV). Pennsylvania explicitly prohibits bilingual tests and the oral reading of questions in the native language.

Two presentation format accommodations related to making English more accessible, oral reading of directions and paraphrasing test items are also prohibited. Tennessee prohibits the former; Wyoming, the latter.

One response format accommodation, allowing the student to respond in the

<sup>\*\*</sup>Prohibits the use of all accommodations, but allows the use of translated tests.

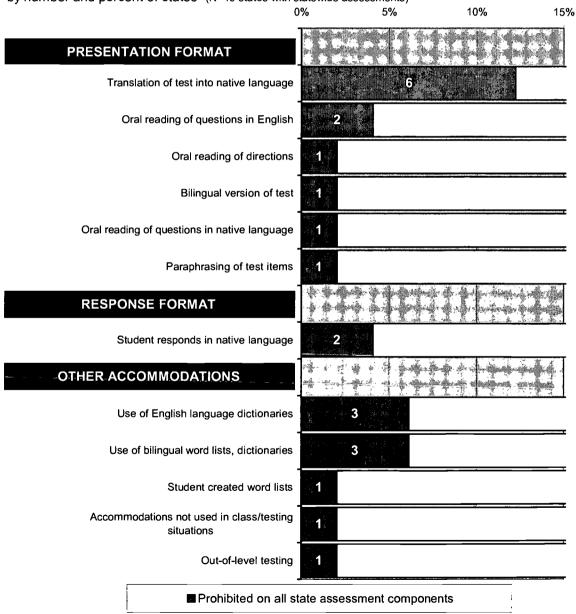

native language, is prohibited by two states (KY and PA).

Under the category other accommodations, the use of bilingual dictionaries or word lists is prohibited on all components by Nevada, Tennessee, and Texas. Allowing the use of English language dictionaries is prohibited on all components by three states (FL, NC, and NY). Similarly, the use of student created word lists is prohibited by the state of Washington. Finally, the

use of out-of-level testing and the use of accommodations that are not used in the student's regular classroom or testing situations are prohibited by North Carolina.

In order to better understand national trends regarding the allowance and prohibition of accommodations, we next focus more directly on accommodations based on whether the accommodation addresses the linguistic needs of ELLs.

Figure 12. Traditional classification of individual accommodations prohibited by number and percent of states (N=49 states with statewide assessments)

View from a Linguistic Classification of Accommodations

In the previous section, accommodations were presented according to a traditional classification system. In analyzing the results based on this system, it became apparent that in order to better evaluate the extent to which the assessment needs of ELLs were being addressed, it would be useful to reclassify the accommodations based on linguistic factors. This section of the report, therefore, focuses on a linguistic classification of the accommodations that have already been presented. By analyzing accommodations using both the traditional and linguistic classification systems, it is possible to clearly picture current policy regarding the accommodations offered ELLs.

Figure 13 takes the accommodations listed in Figure 11 and re-arranges them based on linguistic considerations.

The first group, native language accommodations, includes any accommodations used to make the content information accessible to the student in his/her native language (e.g., allowing the use of bilingual dictionaries, translating the test's directions).

English language accommodations include any accommodations used to help the student better understand test information presented in English (e.g., allowing questions to be read orally in English, explaining directions). The remaining accommodations can be classified as nonlinguistic accommodations (e.g., extending the test time, allowing the test to be administered in a small group setting).

The data in Figure 13 suggests that non-linguistic accommodations are used by states far more than either native language or English language accommodations. The least utilized and perhaps more controversial group (as we will see when we focus on the prohibited accommodations) appears to be native language accommodations.

The most common native language accommodation offered by state policies is

allowing the use of bilingual word lists and dictionaries. Eleven allow their use on all state assessment components states (FL, KY, LA, MD, ME, MI, MT, NC, NJ, OH, and WY), and ten states allow them on at least one component (AL, AZ, CO, DE, MS, NY, RI, SC, VA, and WA), according to Table 9.

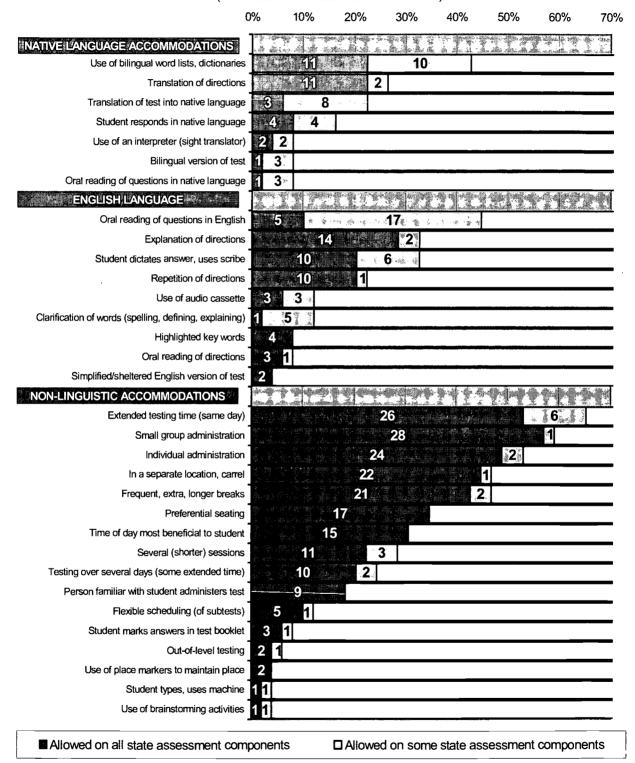

Some states have gone a step further in addressing the language needs of ELLs by producing translated directions and tests. As shown in Table 7, eleven states translate directions on all test components (MI, MN, MT, NJ, NV, OH, OR, PA, SC, TX, and WA), and two states translate directions on at least one component (AL and AZ).

Combining two categories, the use of translated tests and bilingual tests, Table 7 shows that 14 states offer translated tests (CO, DE, KY, MA, ME, MN, NM, NY, OR, RI, TX, UT, VT, and WY). Nine of these states specify that the translation is available in Spanish (CO, MA, MN, NM, NY, OR, RI, TX, and WY); five states do not specify the target language (DE, KY, ME, UT, and VT). In addition to offering Spanish versions, Minnesota translates tests into Vietnamese and White Hmong; New York has translated versions in Chinese, Haitian Creole, Korean, and Russian.

It is interesting to note that there are two states that provide translated tests although they have not specified accommodation policies related to translation (MA and NM). Massachusetts has a bilingual test in Spanish. Similarly, Texas allows Spanish language tests for some components. New Mexico offers a Spanish version of its High School Competency Examination. For its other tests, instead of offering translated versions, the state recommends using commercially published Spanish language tests as alternate tests.

Figure 13. Linguistic classification of individual accommodations allowed by number and percent of states (N=49 states with statewide assessments)

BEST COPY AVAILABLE

Other native language accommodations are allowed in few states. Table 8 shows that eight states allow the student to respond in his/her native language (DE, KS, MA, MT, ND, OR, RI, and TX). Four states allow the student to use an interpreter or sight translator (DE, NH, OH, and VT). states permit oral reading of questions in the student's native language (NY, OR, RI, and WY). (See Table 7.)

English language accommodations offered by more states than native language accommodations. These accommodations most often affect the manner in which the test is presented. Most English language accommodations focus on lessening the reading/writing burden of assessments. The common **English** most language accommodation is oral reading of questions in English. As shown in Table 7, a total of 22 states allow this accommodation on at least one test component (AL, CO, DE, FL, KS, KY, MD, ME, MI, MO, MS, NC, ND, NH, OR, RI, SC, VA, WA, WI, WV, and WY). Six states allow the use of an audiocassette to present the test (MD, MN, MT, ND, RI, and VT). One state allows the use of a videotape (VT).

In addition to accommodations that apply to the presentation of the entire test, there are accommodations that apply solely to the directions. Table 7 shows that explanation of directions<sup>11</sup> is offered on at least one component by 16 states (AZ, CT, DC, DE, FL, KY, ME, MN, MT, NV, OR, SC, TX, VA, WA, and WV), and repetition of directions is offered on at least one component by 11 states (AZ, CO, DC, DE, LA, MD, OR, SC, TX, WA, and WY). Oral reading of directions is less popular; it is allowed in four states (CO, VA, WV, and WI).

Beyond modifying the presentation of the test and directions, Table 7 shows that six states attempt to lessen the language demands of their tests by allowing the clarification of words through spelling, defining and explaining vocabulary (AZ, CO, FL, MT, NV, and WY). Four states attempt to provide clarification by highlighting key words (KS, ND, OR, and VA).

As shown in Table 7, two states, Kansas and Maine, go beyond offering limited modifications to either the questions or directions. They have developed simplified/sheltered versions of their assessments.

An English language accommodation addressed by the states does not affect the presentation of the assessment: allowing the student to dictate his/her answer, as shown in Table 8. This accommodation is allowed on at least one component by 16 states (CO, DE, KS, MD, ME, MI, MO, MT, ND, NH, OR, RI, VA, VT, WI, and WY).

Figure 13 illustrates that the remaining accommodations, those that account for the majority of accommodations addressed in state policies, are non-linguistic. detailed description of the results regarding non-linguistic accommodations, please refer to Figure 11 and the corresponding discussion in the previous section.

By reclassifying allowable accommodations based on a linguistic classification scheme, it is apparent that both native language accommodations and English language accommodations are offered less frequently states than non-linguistic accommodations. Similarly, if we apply the linguistic classification scheme to prohibited accommodations, we find that nearly all prohibited accommodations are linguistic (See Table 10).

Figure 14 summarizes the prohibited accommodations based on whether they are native language accommodations, English language accommodations or non-linguistic accommodations.

The only non-linguistic accommodations that are prohibited are out-of-level testing and accommodations that are not used in daily classroom and testing situations, both of which are prohibited by North Carolina. The remaining prohibited accommodations are linguistic accommodations.

Explanation of directions includes the paraphrasing of directions. In at least one state, Minnesota, this is allowed as early as days before the test, but not at the testing time.

The least used accommodation is test translation, which is explicitly prohibited by six states (DC, IL, IN, NJ, PA, and WV). Pennsylvania also prohibits bilingual tests. (In contrast, as discussed earlier, 15 states allow some type of test translation.) Other prohibited native language accommodations are the use of bilingual word lists or dictionaries, prohibited by three states (NV, TN, and TX), allowing the student to respond in his or her native language (KY

and PA), and oral reading of questions in native language (PA).

Prohibited English language accommodations are use of English language dictionaries (FL, NC, and NY), oral reading of questions in English (PA and TN), oral reading of directions (TN), paraphrasing of test items (WY), and the use of student created word lists (WA).

### Reporting Scores

Once a state has decided to use accommodations, it must also decide how the accommodated students' scores will be reported. The state may include or exclude the scores in state, district and/or school totals, or it may do both.

Figure 15 provides a summary of score reporting policies used by the states that allow accommodations. Nine states indicate that when specific accommodations are used, scores are not to be included in state, district and/or school totals (DE, KS, MD, MS, ND, OR, VA, WV, and VT). Eight states have a policy requiring the scores of ELLs who have received accommodations to be included in state, district, and school totals (KY, LA, ME, MI, NC, NV, TX, and WA). The remaining 20 states that allow accommodations did not supply documentation on this issue.

Figure 16 provides an overview of the number and percent of states that address score reporting when specific accommodations are used. Policies on score reporting vary by the category of accommodation used. No states exclude scores that are obtained through any setting accommodations.

However, some states exclude scores from group totals for students who receive timing/scheduling, presentation, response, and other accommodations. As shown in Table 11, the accommodations that most frequently result in excluded scores include the provision of extended testing time (excluded on at least one component by DE, MD, MS, and VA, and on all components by ND and WV), and the oral reading of questions in English (excluded on at least one component by MD, MS, OR, and VA, and on all components by DE, ND and WV).

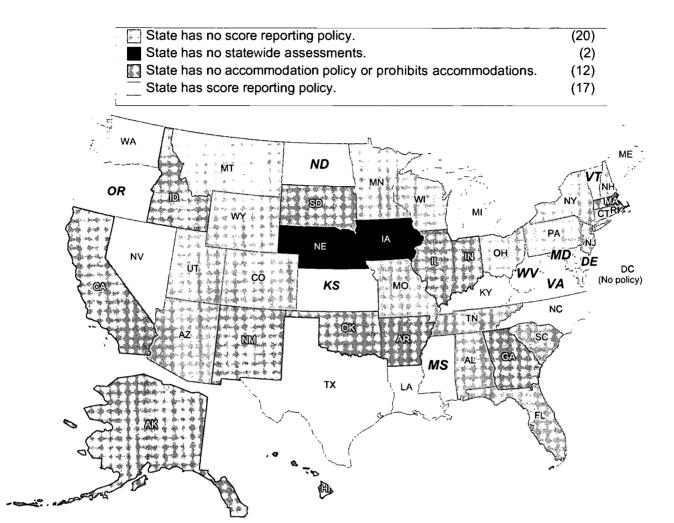

The following accommodations result in excluded scores on at least one component but not on all components: the use of bilingual dictionaries (VA); allowing the student to dictate the answer (MD and OR): oral reading of questions in the student's native language (OR); student responds in native language (OR): translation of the test into the student's native language (OR); the provision of frequent, extra, or longer breaks (VA): the use of an audio cassette recorder either to present the test to students who have difficulty with printed words numbers or to allow students to respond to test questions orally (MD); and the oral reading of directions (VA).

Use of the following accommodations results in exclusion of scores on all components: several shorter sessions (DE); breaks during a subtest (WV); explanation of directions (DE); use of an interpreter (DE); use of brainstorming activities (DE); the provision of frequent, extra, or longer breaks (DE); the use of an audio cassette recorder either to present the test to students who have difficulty with printed words and numbers or allow students to respond to test questions orally (ND); the oral reading of directions (WV); translation of the test into student's language native simplified version of the test (KS); out-oflevel testing (KS); and use of a scribe to record student response to a writing prompt (DE). 12

Both Virginia and West Virginia have determined that oral reading of directions does not maintain standardized conditions, and therefore they do not include the scores of students who receive this accommodation.

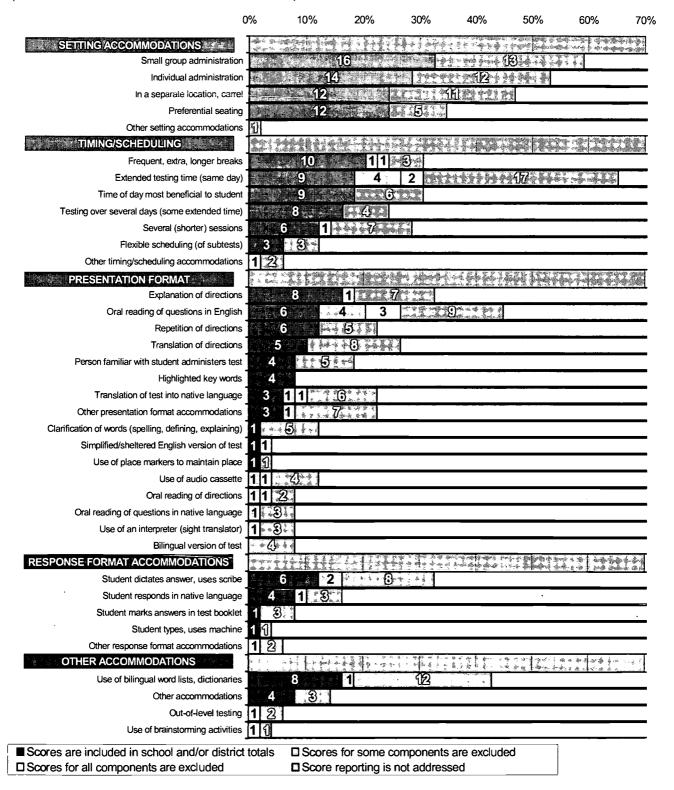

Figure 15. Score Reporting Policy Overview

# Alternate Assessments

Alternate assessments are formal tests or assessment procedures that may be used standard assessments are inappropriate for the student due to lack of language proficiency or other matters. Alternate assessments are not parallel to the standard assessment in format or content. Often, they are based on different content standards. The concept of an alternate assessment. like the concept accommodations, originates in the field of special education, where such assessments are provided to students with significant physical or cognitive disabilities. For the testing of ELLs, alternate assessments should be designed to accommodate their limited English proficiency. Thus, an alternate assessment may be considered a type of accommodation, in that it addresses the particular needs of the ELL in a test situation.

In this study, state policy documents were reviewed in order to understand if alternate assessments are used to assess ELLs. The information recorded in sections 1.7 and 1.8 in each state's report indicates if alternate assessments are allowed or available for ELLs and if the state policy specifies any particular alternate assessments or provides any other guidance on the subject.

As shown in Figure 17, the majority of states with statewide assessments (27) have no policy regarding alternate assessments. Twenty-two states have a policy to allow or prohibit alternate assessments. states offer alternate assessments to ELLs (AR, AZ, IL, KY, MT, NC, ND, NJ, NM, OH, OR, TX, VT, WI, and WY). Seven states explicitly prohibit their use (CA, GA, KS, LA, MN, RI, and SC). It is likely that states that prohibit alternate assessments do so because of the concern that their scores are not comparable to those of the standard assessment. Indeed, some states may feel that alternate assessments are a threat to the imposition of common standards for all students.

Information from the 15 states that offer alternate assessments varies greatly in detail and content. The types of information addressed include whether alternate

assessments are required of students not participating in state assessments, who should be given the assessments, what types of assessments are allowed, and whether scores from students who took alternate assessments are to be included in state reports. Few states have a policy that provides information in all these areas. Therefore, in general it can be said that state policies regarding alternate assessments for ELLs lack detail.

A review of state documents reveals the following:

- 1. Alternate assessments are required for those students not participating in the state assessment in six states (AR, IL, MT, NM, TX, and WI).
- 2. Four states specify the number of years that an ELL may be given an alternate assessment (AR, IL, KY, and WY).
- 3. In two states the specified alternate assessments are simply the existing state assessments presented orally (OH) or in the student's native language (KY). These accommodations would not be considered alternate assessments in other states.
- 4. Five states allow the use of an alternate assessment in the student's native language (NM, KY, WY, NJ, and WI). Two states specify that commercially published tests be given to Spanish-speaking students (AZ and NM). Arizona specifies the test; New Mexico does not.
- 5. Two states use state-developed tests as alternate assessments for ELLs (IL and WI). In both states, the focus of the alternate assessments is in transition from language proficiency skills to content-based knowledge.
- 6. Three states specify that portfolio assessments may be used as alternate assessments (KY, NC and TX).
- 7. Two states specify the allowance of performance assessment or other authentic assessment methods (NJ and NC).

- 8. Two states provide considerable guidance to districts as to other appropriate test formats, methods, and indicators of the state content competencies (NM and WI).
- 9. One state, New Mexico, which has a high school exit exam, permits ELLs to take an alternate assessment of its high stakes exam. The district can create this alternate assessment. A student may take the Spanish version of the state exam, if appropriate.
- 10. One state, Wisconsin, has developed a comprehensive manual for developing alternate assessments for ELLs.
- 11. Half of the states that have alternate assessment policies use the term "alternate assessment" interchangeably with "alternative assessment."

To provide a more detailed and accurate description of state policies regarding alternate -- and "alternative" -- assessments, policies of the individual states are provided in Appendix C. In a few cases, state policies are summarized. In the majority of cases, the policy is stated verbatim from the state documents. This is done to avoid any misrepresentation of the intent of the state policies caused by the variability in usage of the terms "alternate" and "alternative."

Examination of the written references and discussions of alternate assessment for ELLs in state documents indicated that the discussion of this subject is often minimal and lacking in detail and focus. The 15 states whose policies are summarized in Appendix C are the only states whose policies allow for some type of alternate assessment. Generally, policies in most of the 15 states are sufficiently vague as to offer little or no help to local districts and schools in deciding on alternate assessment measures. In most states, it is unclear from policies whether the alternate assessments are to be parallel in format and content, and whether they will be based on same standards as the regular Similarly, the state policies assessment. usually do not define whether and how scores from alternate assessments are to be reported.

The examination of alternate assessment policies and measures in states that have made more rigorous efforts -- Montana, Vermont, and Wisconsin -- can provide substantial information to other states seeking to develop alternate assessment programs for ELLs. The alternate assessment programs developed in these three states provide more options for ELL participation in the states' assessment programs.

# Summary of State Policies

Figure 18 provides a visual summary of inclusion and accommodation policies by number and percent of states. It shows that nearly all states (48) have an inclusion or exemption policy statement. Forty-six states allow exemptions; two states prohibit exemptions. Thirty-five states have a policy regarding exemption time limits. Forty-five states have policies that address the issue of inclusion criteria. Thirty-nine states indicate who should make the inclusion or exemption decision.

Forty states have accommodation policies. Accommodations are allowed by 37 states, and 13 of these states prohibit at least one type of accommodation. Three states prohibit all accommodations. Twenty-six states have policies that include accommodation criteria. Twenty-three

states identify accommodation decision-makers.

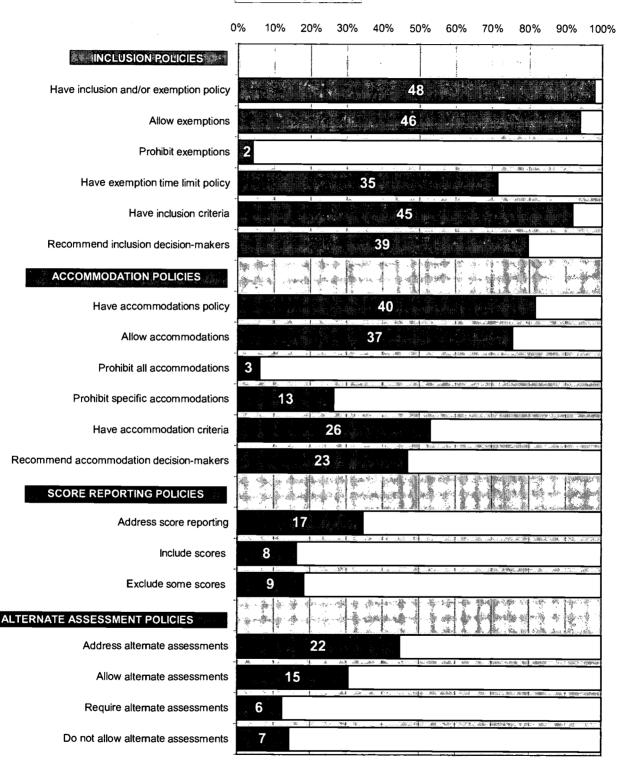

The effects of accommodations on score reporting are not discussed in the documents submitted by 20 of the 37 states that allow accommodations. The 17 states that do discuss the effect of accommodations on score reporting are divided on the issue. Eight states include the scores of accommodated students in state, district and/or school totals. Nine states exclude some scores.

Alternate assessments are addressed by 22 states. Fifteen states allow alternate assessments; seven states do not. Of the 15 states that offer alternate assessments, six require an alternate assessment be given to students who are not included in the regular state test.

## VI. Discussion

# Introduction

The analysis of state policies reveals that in the 1998-1999 school year, almost all states (48) had policies in place that address the inclusion and exemption of ELLs in state assessment programs. In addition, most states had policies for identifying ELLs (41 states) and for accommodating ELLs in their state assessments (37 states). Little more than one-third of the states (18) provided documents that address the issue of reporting ELL test scores, and fewer states (15) offer alternate assessments. data indicate that states are at varying stages of implementing policies to include ELLs in state tests. The inclusion of ELLs is a vital element in ensuring that all students are expected to reach the same standards.

State policy documents vary in length and focus. Some states provide minimal information. For example, Georgia's policy states, "LEP students shall participate in all state assessments unless the school and the parent(s) or guardian(s) agree it is not in the best interest of the student to participate at this time." This one sentence alludes to inclusion, exemption, and relevant criteria and decision-makers. It is essentially the only mention of these issues in all the state documents provided.

Accommodation policies in some states are also very brief. For example, Tennessee states, "Modifications in testing may include \*Flexible Scheduling: following. Administer the test in shorter sessions. \*Flexible Setting: Have the administered individually or in small groups by a person(s) familiar to the student. No part of the [test], including internal test directions and test items, may be read to students. Translation dictionaries may not be used."

The format in which policies are presented varies greatly. Documents submitted by states that contained information relevant to the analysis ranged from one-page memos to grant-funded reports to actual state codes.

Regardless of their length or format, a look at state policies suggests trends in how states are handling the issue of including and accommodating ELLs in state assessment programs. A focused look at each aspect of ELL participation in state assessments helps identify these trends.

Top Ten States. Efforts to describe a national picture of ELL inclusion and accommodation policies require a look at relevant policies in all states, regardless of the density or scarcity of the ELL population in any one state. However, since it is likely that states with higher ELL populations would have developed more detailed and comprehensive policies than states with fewer ELLs, a subgroup of ten states with the highest ELL populations was analyzed. It may be expected that a focus on the states with higher ELL populations would identify the state-of-the-art in ELL inclusion and accommodation policies. The "top ten" states are, in order of ELL population, California, Texas, Florida, New York, Illinois, Arizona, New Mexico, Washington, New Jersey, and Massachusetts (Macias, 1998). 13 These states account for 82.8 % of the total ELL population in U.S. public schools, with California alone accounting for 40%. A brief description of relevant findings from a review of state policies in the "top ten" states follows each sub-section of this Discussion section.

### Definition and Identification of ELLs

The definition of ELLs came to be a point of interest. Though the request documentation did not specifically ask states to submit a definition of ELL, as we analyzed the state documents, we noticed two emerging trends: 1) for eight states, a definition of ELLs was not included in the documents submitted; and, 2) of the 41 states for which a definition was provided, there was a broad range of detail and focus across definitions, as discussed in the Results section. This finding is neither new nor insignificant. To reiterate a point that has been made previously (August, et al., 1994; O'Malley & Pierce, 1994; Rivera, et al., 1997; Spicuzza, et al., 1997), the

<sup>&</sup>lt;sup>13</sup> The state census report for 1996-1997 provides the latest available data.

definition and identification of ELLs may be the first step in determining the degree of ELL participation in state tests, and a means of accumulating complete and accurate information on the student population. Varying definitions, and poor or non-existing definitions, across states can lead to inconsistent practices in classifying ELLs and determining ELL participation.

Top Ten States. There is a lack of consensus in ELL definitions across the top ten states. Of the eight states that provide a definition of LEP (FL, IL, MA, NJ, NM, NY, TX, and WA), one state uses the Federal Register definition (FL), as described on page 17 of this report. The remaining seven states use a definition unique to the state. Two states do not include a definition in their assessment policy documents (AZ and CA).

# Inclusion/Exemption Policies

The analysis of inclusion/exemption policies focuses on four major aspects of the inclusion/exemption decision:

- 1. Does the state have an exclusion/exemption policy?
- 2. What criteria does the state specify be used in making inclusion/exemption decisions?
- 3. Who does the state specify should make the inclusion/exemption decisions?
- 4. If the state allows exemptions, what is the maximum length of time, if any, a student may be exempted or deferred?

### Inclusion/Exemption Criteria

The analysis of state assessment documents showed that 48 states have inclusion/exemption policies. A look at the criteria used in making inclusion/exemption decisions, as specified by state policies, shows four notable tendencies:

1. State policies tend to specify the use of one or two, rather than multiple, criteria in inclusion or exemption decision-making.

- 2. The two most commonly specified criteria are the assessment (both formal and informal) of a student's English proficiency, and the amount of time a student has spent either in the U.S., in a public school in the state, or in a special program.
- 3. States that specify more than two criteria tend to list a student's enrollment or placement in a special program as one of the criteria.
- 4. Criteria that might be classified as academic are specified by only a few states. These criteria include performance in schoolwork, academic background in another country, and teacher observations and recommendations.

These trends seem to be based on the belief that there is a specific identifiable point at which inclusion or exemption becomes justifiable. That point can be a specific score or level achieved on a proficiency test, or a specific length of exposure to English or to the school curriculum. Proficiency level and time may be useful in combination with other factors to form an overall picture of a student's degree of preparedness for taking a standardized test. However, it is arguable whether these criteria consistently provide enough information to make an informed inclusion/exemption decision, in and of themselves.

The use of one or two criteria, rather than multiple criteria, to determine inclusion or exemption can lead to inaccurate decisions. Given the limited amount of information any one criterion can provide, state policies should require schools to gather more complete information on a student and to consider multiple factors when deciding on a student's participation in state tests.

The occurrence of either criterion (language proficiency or time) as the only criterion considered for inclusion/exemption decisions -- as it is in the case of 17 states -- is notable, particularly in light of the limitations of each.

Proficiency tests can be a good indicator of certain English language skills, but such

tests typically do not test all skill areas, nor do they address a student's *academic* skills. Consequently, the information provided by these tests can give an incomplete picture of a student's level of preparedness for taking a standardized test.

Similarly, the use of time criteria offers incomplete and insufficient information on whether a student is fit for inclusion or exemption.

The infrequent use of academic criteria in decision-making is notable. As indication of a student's preparedness for taking a standardized test, a student's academic background would seem to be a valid criterion. Therefore, perhaps states need to specify academic criteria in addition to the factors considered when making inclusion/exemption decisions. Academic background can be a useful consideration in cases where the native language schooling is strong but the language proficiency or time in school is marginal or weak. student with a strong academic background who does not meet a time criterion may well participating capable of in the benefit assessment and mav from participation.

Top Ten states. All of the ten states with the highest ELL populations have inclusion/exemption policies. Nine states (AZ, FL, IL, MA, NJ, NM, NY, TX, and WA) allow exemptions; California does not. Consistent with national tendencies, policies in the states with large ELL populations specify language and time criteria most frequently. One finding of note is program placement as the most frequently specified criterion, an indication that special programs designed for ELLs are in place in states with large numbers of ELLs. One other finding that is consistent with the national trend is the general absence of consideration of academic factors in inclusion/exemption Two of the states in this decisions. category (NY and TX) consider performance on other tests; Texas is the only state that considers a student's performance in schoolwork. Regarding the number of criteria used, four of the nine states in this category that allow exemptions have policies that specify only one criterion (AZ, FL, NM, and NY), one state specifies two criteria (WA), and four states specify more than two criteria (IL, MA, NJ, and TX); this is also generally consistent with policies across the nation.

### Inclusion/Exemption Decision-Makers

Of the 48 states with inclusion/exemption policies, 39 address the issue of decisionmakers. A close look at these 39 states' policies indicates a tendency to specify use team approach for making inclusion/exemption decisions. **Policies** typically specify teams that consist of three to five members, including a principal or other school official, the student's parent(s) and/or quardian(s), the student's regular classroom teacher, and one or two other Noticeably absent is specific members mention of individuals with professional knowledge of language learning processes (e.g., ESL or bilingual teachers). To decide if a student should participate in state professional person with testing, а knowledge of language learning processes can provide valuable information to the decision-making process. While it may be the intention of state policies that such persons be included as members of decision-making teams, it is unfortunate that only five states indicate that a student's ESL or bilingual teacher, who are presumably knowledgeable about language learning processes, take part in the decision-making process.

Top Ten States. Policies regarding inclusion/exemption decision-makers in the states in this category are consistent with national tendencies. State policies most frequently specify that decision-makers include unspecified committee members and school/district officials, each specified by half the states. Five states specify school/district officials (AZ, MA, NM, NY, and WA). Four states' policies indicate that decision-makers include unspecified committee members (FL, IL, NJ, and NM). In Texas, members of the Language Proficiency Assessment Committee are to include a professional bilingual educator, a professional transitional language educator, a parent of a limited English proficient student, and a campus administrator. Washington is the only other state in this

category that specifies that a person with professional knowledge of language learning processes, an ESL/bilingual/migrant specialist, take part in the decision-making process. The specification of parents or guardians appears in the policies of two states (AZ and WA). This represents a rate of twenty percent, which is somewhat less than the forty percent national average.

### **Accommodation Policies**

With respect to the accommodation of ELLs in state assessments, the purpose of the policy analysis was to identify the number of states that allow (37) and/or prohibit (23) specific accommodations, as well as to answer the following questions.

Regarding the decision-making process:

- 1. What criteria does the state specify should be used to decide on accommodations for any one student?
- 2. Who does the state specify should make the decision?

Regarding the specific use of accommodations, across states:

- 1. Which accommodations are most frequently offered?
- 2. Which accommodations are least frequently offered?
- 3. Which accommodations are most frequently prohibited?

### Accommodation criteria

A total of 37 states have a policy that allows accommodations for ELLs. Regarding the criteria specified in state policies for accommodation decision-making, the most frequently specified criterion is "Those accommodations which are used in a student's routine classroom situation." This criterion is specified by 21 states, including 13 states in which it is the only criterion specified. The predominance of this criterion seems easily justifiable, perhaps too easily. An attempt to fully understand the reasoning and dynamics behind this

policy decision can lead to speculation in many areas.

The practice of extending the use of classroom accommodations into testing situations first developed out of the attempt to address the needs of students with disabilities, whose classroom accommodations have long been tracked by their Individualized Education Plan (IEP). comparing education policies and practices established for ELLs to those of students with disabilities, it is important to note that, unlike students with disabilities. ELLs do not have IEPs. In the absence of IEPs for ELLs, it might prove difficult for states to identify which accommodations, if any, are routinely provided to each ELL. To the extent that this is the case. determination of appropriate accommodations for ELLs may prove to be a more difficult task than it is for students with disabilities. While it is possible that some accommodations offered to students with disabilities may be beneficial to some ELLs. attention to the question of how best to choose ELL accommodations should be addressed independently from consideration of policies established for students with disabilities.

Close consideration of the use of classroom accommodations, as applied to the ELL population, might lead to further speculation as to which accommodations fit the description of being part of a student's routine classroom situation. Use of a bilingual dictionary might seem a likely choice, and, in fact, is an allowable accommodation in 21 states. Identification of other accommodations that fit this description, however, might prove difficult.

Top Ten States. Of the ten states with the highest ELL populations, only six allow accommodations (AZ, FL, NJ, NY, TX, and WA). Two have no accommodation policy (CA and MA), and two states prohibit accommodations (IL and NM). New Mexico does, however, allow the administration of Spanish language versions of tests. Of the six states that allow accommodations, only two specify a criterion to be used in the decision-making process (TX and WA). As is consistent with national tendencies, the

sole criterion in both states is the student's routine classroom accommodations.

### Accommodation decision-makers

A look at decision-making policies reveals a tendency to suggest use of a team approach in making accommodation decisions, along the lines recommended by Rivera and Stansfield (1998). Consistent with inclusion/exemption decision-making policies, team members typically include the student's classroom teacher, a school official. parent(s) the student's quardian(s), and one or two other members. unspecified. More often inclusion/exemption policies, accommodation policies specify that a student's classroom teacher take part in the decisionmaking process. This policy is appropriate, particularly in light of the tendency to specify classroom accommodations as those to be allowed in a testing situation. Another similarity to the inclusion/exemption decision-making policy is the absence of a team member with professional knowledge of language learning processes, e.g., a bilingual educator or ESL teacher.

One member notably absent from most state lists of accommodation decisionmakers is the student. Rivera and Stansfield (1998) recommended asking students which accommodations they believe they need. Considering the lack of research in the area of accommodations, and the widely varying policies that exist, it is possible that student input would provide quite useful information regarding choice of accommodation(s). A student could be given a practice test, with the opportunity to try out different accommodations. The student could then decide which accommodation(s) would benefit him/her. In addition to providing valuable information from the student perspective, this practice would also provide another means of involving the student in his/her educational program.

Top Ten States. Of the six high ELL population states that allow accommodations (AZ, FL, NJ, NY, TX, and WA), four (AZ, NY, TX, and WA) specify who the decision-makers should be. School/district officials are specified by

three states (AZ, NY, and TX). One state (NY) specifies a student's classroom teacher, while one state (WA) suggests unspecified committee members.

Allowance and Prohibition of Accommodations

Before turning to the specific use of accommodations, we consider the intent behind the provision of accommodations, and how this might relate to their use, as applied to the ELL population.

Accommodations are offered to minimize the effects of disadvantage. As applied to ELLs in testing situations, disadvantages generally fall into one of two categories. These can be identified as linguistic and other. Linguistic disadvantages are related to the student's limited English proficiency. This is a temporary condition, which can be corrected in time through exposure to and training in English. The use of certain linguistic accommodations can help to minimize the impact of these limitations. Other disadvantages include lack of familiarity with American culture, particularly its education system and the system of standards-based assessments.

Additional obstacles include a student's inexperience and unfamiliarity with the testing process. Some students from diverse cultural and educational backgrounds may lack experience with the test-taking process familiar to American students. Such students would likely be lacking in testwiseness and may also lack confidence in their academic abilities. These limitations may affect their interest in and motivation to perform on a standardized test. There was no evidence in any state document of accommodations that address these features of cultural background. These features can be appropriately addressed by a test preparation program, such as that described in Rivera and Stansfield (1998), and discussed in the Review of Literature.

Two notable patterns about the specific use of accommodations have emerged from this study:

- 1. The types of accommodations most frequently allowed are setting and timing/scheduling accommodations.
- 2. The types of accommodations least frequently offered and most frequently prohibited are those that lighten the language load of the test, i.e. accommodations that might be most beneficial to ELLs.

As enumerated in the Results section, the most frequently allowed accommodations fall into the setting and timing/scheduling classifications. While any one of these accommodations might be of coincidental one student. benefit to anv examination reveals that none of these accommodations is designed to meet the linguistic or cultural disadvantages of ELLs. This raises the issue of propriety: for which students were these accommodations developed, and which student needs do accommodations these appropriately address?

Let us consider the following two accommodations, both of which are among the most frequently allowed accommodations for ELLs:

- 1. Administering the test to one individual (an accommodation of *setting*).
- 2. Administering the test at a time of day most beneficial to the student (*timing/scheduling*).

An initial impression might be that these accommodations seem appropriate and may be beneficial to some students. However, it is not easy to identify which specific ELL needs these accommodations are intended to meet, or which specific of **limitations** the ELL these accommodations are intended to minimize. of these accommodations designed to reduce test anxiety. As such, they would be beneficial to any student, not just an ELL. In fact, it could be argued, albeit weakly, that the provision of these presentation accommodations to any one student provides an unfair advantage to that student. If this is not a strong argument for students in general, it is not a strong argument for ELLs either. Although these accommodations might not do any harm, and might ultimately provide some positive psychological or attitudinal benefit to the ELL, they do not address the ELL's principal limitation, which is lack of English proficiency, or the ELL's lack of familiarity or readiness for formal assessment situations.

It should be expected that the allowance or prohibition of any one accommodation include examination underlying assumptions that serve as a basis for that accommodation. Let us consider the possible assumptions that underlie the basis for allowing "Oral reading of questions in English," one of the most frequently allowed accommodations for ELLs. This accommodation assumes that spoken questions are more comprehensible written auestions. This questionable assumption because spoken questions require retention of what is heard. and both decoding and retention are affected by lack of proficiency in a The language. accommodation assumes illiteracy in English, and that this can be offset by a student's aural comprehension. While such a configuration of second language skills is frequently found in adult immigrants working in this country, children in school situations normally acquire literacy and oral language at about the same rate. The assumption of illiteracy also means that a student with limited literacy in English would not be able to provide written answers in English to constructed response questions. Therefore, accommodation should not considered particularly helpful for students who have limited English proficiency. Thus, this accommodation does not seem to be designed to address the needs of an ELL.

Finally, a look at the list of presentation indicates accommodations а tendency toward ensuring that the student understands test directions. After "The oral reading of questions in English," four accommodations intended to help the student understand test directions -- the explanation, repetition, translation, and oral reading of test directions -- represent nearly 50 percent of all presentation accommodations allowed. Because the understanding of test directions is essential,

accommodations involving test directions are appropriate for ELLs.

To facilitate discussion of the infrequency of accommodations designed to lighten the language load of the test, we again focus on new system of classifving With this system, we accommodations. framework that more propose а appropriately addresses the needs of language learners. This framework divides accommodations into two broad types: linguistic and nonlinguistic accommodations. Linguistic accommoda-English tions include language accommodations native language and accommodations. Non-linguistic accommodations consist of all those that are designed to address other (non-linguistic) characteristics of the ELL.

- 1. English language accommodations. These include the repeating, simplifying, or clarifying of test directions in English, the use of English language glossaries, the linguistic simplification of test items, the reading aloud of test questions in English, and the use of alternate assessments or alternate assessment procedures that lighten the language load of the test.
- 2. Native language accommodations. These include the use of bilingual dictionaries: the use of a translator or interpreter; the oral reading of test questions in the student's native language; the provision of bilingual, translated or adapted versions of tests: the use of assessments in the student's native language, and allowing a student to respond in his/her native language.
- 3. Non-linguistic accommodations. These include all other accommodations, such as extended time, use of a familiar examiner, testing in a separate room with other ELLs, and a special test preparation program designed to familiarize the student with the nature of formal state assessments, among others.

The policy analysis of state documents reveals a tendency of states to allow a disproportionate number of *non-linguistic* to *linguistic accommodations* for ELLs. This

finding may be explained as the logical result of a combination of factors. One factor may be the history of how accommodations came to be available to ELLs. Another may be the controversial nature -- both pedagogical and political -- of some *linguistic accommodations*. A third factor may be the challenge, in terms of cost and human resources, of appropriately providing and administering some *linguistic accommodations*.

Top Ten States. Accommodation policies among the ten states with the largest ELL population reflect the national tendencies. From a traditional viewpoint, findings include the following:

- 1. Setting and timing/scheduling accommodations are the most frequently allowed accommodations.
- 2. Presentation accommodations are the most numerous kinds of accommodations; the ostensible purpose for their use is to ensure students understand the test directions.

From a linguistic perspective, as well, findings are consistent with national tendencies:

- 3. Use of bilingual word list/dictionary is the most frequently allowed accommodation.
- 4. Translation of the test into a student's native language is the only accommodation prohibited; it is prohibited by two of the top ten states (IL and NJ).

### The History of ELL Accommodations

The recent practice of providing accommodations to ELLs is an extension of similar policies to accommodate students with physical, developmental, or cognitive limitations that has existed for some time in the field of special education. The extension of accommodations from the special education field also explains the "traditional" accommodation classification system and the pattern of availability of specific accommodations.

Many state policies list accommodations for ELLs that are more appropriately suited to

students with disabilities. For example. states' lists of accommodations available to **ELLs** often include the following accommodations: Braille versions of tests. use of a magnifying glass, use of sign language interpreters, use of special recording equipment for student responses, test administration in a student's home, the use of masks or markers to maintain place. and extending the testing time to a point where the student seems no longer able to remain on task. Because it was evident that the state policies that contained these accommodations were developed students with disabilities and simply transferred to documents concerning the testing of ELLs, these accommodations are not discussed in this report.

Other accommodations carried over from special education policies more likely to be of benefit to some ELLs are discussed in the report. Examples of these accommodations include individual or group administration, extended testing time, and allowing the student to dictate answers.

### Nature of Linguistic Accommodations

addition to the fact that ELL accommodations were first developed based on accommodations provided for monolingual English-speaking special needs students, another contributing factor to the infrequent availability of linguistic accommodations may be the political and financial nature of some linguistic accommodations. Native language accommodations can be of particular concern. specifically the use of an interpreter and the translation of tests.

The use of interpreters and assessments in practical the native language incurs problems. Interpreters with appropriate language and interpreting skills must be identified and trained in appropriate assessment practices. The creation of assessments in the native language can also be complicated. If the assessment is to be a substantially or completely different assessment, the time and effort required are equivalent to the time and effort required to develop assessments in English. If the assessment is to be essentially a

translation of the standard assessment, the task is simpler, but the translation must be competently done and reviewed. Test translation requires a competent professional translator who is also trained in item writing procedures, and there are a limited number of people who fit this profile.

The political atmosphere prevalent in any one state can inhibit a state from providing native language accommodations. For example, in states that have declared English as the official language of the state, it may be neither possible nor politic to devote substantial amounts of energy and money to the development of an array of linguistic accommodations. From a financial perspective, the cost of hiring interpreters and the development of translated versions of tests can be prohibitive, particularly if the number of students to be served is small.

In light of the historical, political, financial, and practical concerns surrounding the provision or prohibition of linguistic accommodations, we suggest that states identify allowable accommodations only after having sufficiently answered the following questions:

- 1. Is this accommodation appropriate for ELLs? What specific need or disadvantage is it intended to address, and can it address the need or disadvantage appropriately?
- 2. Will use of this accommodation give the accommodated student an unfair advantage?
- 3. Is use of this accommodation likely to provide more accurate information on the student's knowledge and skills than would otherwise be provided?
- 4. Can proper provision of this accommodation be ensured, given pedagogical and practical resources available?

Despite the fact that researchers (August & McArthur, 1996; Rivera & Vincent, 1997) have called attention to the need to consider the use of accommodations on an individual basis rather than to apply them broadly to students with disabilities and

78

ELLs, state policies generally do not do this. In short, the assessment policies need to be more clearly delineated to address the needs of individuals and groups of English language learners. Reclassifying accommodations offered to ELLs based on linguistic factors might be a step towards providing educators with a new perspective when focusing on which accommodations actually help ELLs and which do not.

In summary, it seems that recommendations outlined in Title I, and highlighted by Stancavage and Quick (1999) are worth repeating:

"Furthermore, assessments used for Title I must provide for inclusion of LEP students, who shall be assessed, to the extent practicable, in the language and form most likely to yield accurate and reliable information on what they know and can do to determine their mastery of skills in subjects other than English. (To meet this requirement, the State shall make every effort to use or develop linguistically accessible assessment measures, and may request assistance from the Secretary if those measures are needed.)" (p. 7).

### Score Reporting

The policy analysis indicates that the state policies submitted for this study typically do not address the issue of reporting ELL scores. In addition, policy documents from the 17 states that do address score reporting often lack detailed evidence of a comprehensive policy. For these reasons, description of score reporting practices in this report is limited. Since the IASA requires states to implement comprehensive policies regarding the participation of ELLs in state assessments by the 2000-2001 school year, states must address the issue of score reporting. States that have minimally addressed the issue first need to analyze where their policies fall with regard to ELLs. Next, they need to refine their ELL assessment policies to ensure that score reporting is addressed in an appropriate way.

Top Ten States. Only two of the ten high ELL populated states address score reporting in their policies (TX and WA). The

policies for both states specify that test scores of ELLs are to be included in school totals.

### Alternate Assessments

Data on the availability of alternate assessments seem to confirm that alternate are infrequently assessments Policies in less than one-half of all states (22) include some mention of alternate assessments. Of these. alternate assessments are prohibited in seven states. while 15 states allow alternate assessments. Policies from these 15 states are brief. In all cases where a description of the alternate assessment is provided, the assessment is a modified version of existing state assessments, or is a language achievement test, either in English or Five states allow portfolio Spanish. assessments, performance assessments, or other authentic assessment methods (IL, KY, NC, TX, and WI). These states require the alternate assessments be developed at the local level. The one exception to this is Kentucky, where portfolio assessment is a part of the state assessment program, and the state provides guidelines for the assessment. The lack of development of alternate assessment measures is evidence of a need for states to further examine how they are meeting ELL assessment needs.

The development of alternate assessment systems is evident in a small number of states. However, the systems generally are not in an advanced stage of development. Nevertheless, the existence of alternate assessment policies may point to the early stages of a move to provide assessments that allow flexibility in mode of expression, that are less likely to penalize a student because of language limitations, and that are more closely in line with current instructional practices than are the standard state assessments.

Although alternate assessments may likely provide appropriate means for assessing ELLs, the provision of alternate assessments needs to be approached cautiously. Close consideration needs to be given to the feasibility of the development of alternate assessments, the types of assessments appropriate for any given content area, and the comparability of

79

alternate assessments with existing assessments. Research in these areas would be helpful to provide information for the development of appropriate alternate assessments for ELLs.

State alternate assessment policies suggest that development of an alternate assessment policy in the majority of states is slow. States in which efforts have been made shows great inconsistency in all areas of alternate assessment policies, including such fundamental issues as the meanings and usage of the terms "alternate" and "alternative" assessments. As states look

to develop this aspect of their assessment programs, they need to first settle on an operational definition of the terms, before setting forth the foundations of the alternate assessment system.

Top Ten States. There is evidence of alternate assessment policies in six of the ten states in this category (AZ, CA, IL, NJ, NM, and TX). Of the six, five allow alternate assessments (AZ, CA, IL, NJ, and TX). Three of the five states require them (AZ, CA, and IL). New Mexico does not allow alternate assessments.

## VII. Summary and Recommendations

### Summary of Findings

Data from the analysis of state policies provide a national picture of current state policies regarding the inclusion, exemption, and accommodation of ELLs in state assessments. Bearing in mind the research questions, the analysis of state policies lead to the following conclusions:

- 1. Almost all states (48) have inclusion policies for ELLs. Forty-six (46) states allow some form of exemption. Of these 35 states have policies regarding exemption time limits. Most states (40) have accommodation policies.
- 2. State policies generally provide minimal guidance to local districts and schools.
- 3. State policies vary significantly in detail, in their focus on ELL assessment needs. They are often brief, lack specificity, and do not address important aspects of ELL participation in state assessments.
- 4. Most state policies do not specify the consideration of a student's academic background as a criterion for inclusion/exemption decision-making.
- 5. Most state policies do not specify that a person with professional knowledge of language learning processes, such as an ESL or bilingual education teacher, take part in deciding if a student should participate in an assessment and/or be accommodated.
- 6. The accommodations most frequently allowed are carried over from Special Education accommodation policies and do not specifically address the linguistic needs of ELLs.
- 7. Accommodations, like test translation, that would provide the greatest amount of language support for some ELLs, are among those least frequently allowed and most frequently prohibited.

- 8. Policies regarding alternate assessment measures for ELLs are absent from most state assessment programs.
- 9. Policies in the ten states with the highest ELL populations are generally consistent with those across the nation. They are characterized by a lack of consensus and comprehensiveness. One notable finding across the ten high ELL population states is the lack of policies regarding accommodations.

### Recommendations

In light of efforts to provide equitable educational opportunities for all students, state inclusion, exemption, and accommodation policies generally need to be more fully developed. Consideration of the following recommendations can be useful to states that wish to review existing policies and revise them so that they are aligned with current legislation and good practice:

To equip local districts and schools with the tools necessary for making appropriate decisions regarding the participation of ELLs in state assessments, states need to continue to develop assessment policies that offer specific guidelines. Guidelines should be provided in seven areas.

- 1. The definition and identification of ELLs. Assuming availability, the definition and identification of ELLs should be included in assessment policies.
- 2. Inclusion, exemption, and accommodation decision-making. State policies need to direct districts and schools to consider multiple factors, including the student's academic background. State policies should also encourage professionals with knowledge of language learning processes to participate in the decision-making process.
- 3. Accommodation criteria. When designing accommodation policies for formal assessments states need to specify policies that rely less on general criteria (such as whatever accommodations are currently used in instruction). State policies should direct districts and schools to focus more on

- a student's educational background and needs.
- 4. Accommodation policies. Accommodations allowed for ELLs must be designed to address specific needs of ELLs. States and LEAs should work with their test developers to address the appropriateness and validity of accommodations.
- 5. Alternate assessments. State assessment programs need to develop measures that are adequately aligned to curriculum, but lessen the impact of English language proficiency, and allow students the opportunity to demonstrate skills and knowledge in meaningful ways. One means of doing this is through developing alternate assessment instruments.
- 6. Score reporting. States néed to implement policies that meet IASA requirements for reporting ELL test scores, a vital element in the task of holding schools accountable for the education of all students.
- 7. High stakes testing. Although this study did not focus on the use of tests to determine eligibility for a high school diploma, the study did identify a growing number of states that are moving rapidly in this direction. When the assessment is high for the examinee. guidelines stakes regarding inclusion and accommodations of ELLs assume increased importance. Under such circumstances, it may be appropriate to offer increased guidance or guidelines to districts. It may be appropriate for the decision-making criteria to be slightly different or more specific in such circumstances. For example, English language proficiency might be more important than number of years in the U.S. under such circumstances.

### Recommended Research

As **IASA** implementation deadlines approach, the development of new state policies is a major focus of many states. Indeed, during the time that this study has taken place, several states have submitted documents relating policy changes state assessment regarding ELLs in

systems, many of which are to have gone into effect beginning in the 1999 - 2000 school year. As policies are being further developed, it is advisable that descriptive and experimental research be conducted at the national and state levels. At the national level, state policy documents should be gathered and analyzed at least every two years in order to keep pace with the constant changes in the ways that states address the assessment needs of ELLs. The regular gathering of policies would identify new polices and provide an updated picture of ongoing efforts of states to include and accommodate ELLs in state assessment programs.

At the state and district level, research both should focus on policy implementation studies regarding inclusion and accommodation policies for ELLs. The following topics of study should be pursued:

- Regarding inclusion policies, a survey of states is needed to determine the number and extent to which ELLs in each state are participating in state assessment programs includina participation in alternate assessments. Assessment case studies should also be conducted to document implementation practices at the district and school level.
- Regarding accommodation policies. research in districts and schools is needed to examine accommodations used and their utility and effect on ELL scores, and on school and district test scores. The goal of this research would be to identify accommodations that enable ELLs to demonstrate content knowledge by minimizing interference caused by limited English proficiency.
- Regarding score reporting policies, an implementation study is needed to

While it would be an ideal situation if all accommodations were studied in terms of their appropriateness and impact before being allowed, in many cases, this is far from practical. Like other worthwhile educational innovations, the provision of accommodations cannot wait until a research base for them has been compiled. Instead, educators should use good judgment and then study the effects and adequacy of the policies they have set.

determine how scores of ELLs, whether tested under standard or non-standard conditions, are treated at the state, district and school levels. In addition, it is important to analyze the effects of score reporting policies on the student and his/her education.

 Regarding alternate assessment, research is needed to determine the comparability between state standards and alternate assessments, as well as the degree of correspondence between standard and alternate assessments. Of particular interest is the issue of how ELL inclusion in assessment programs affects instruction in the content area.

Findings from these kinds of studies should inform states' and provide "best practice" ideas that can help states improve ELL inclusion and accommodation policies.

#### Other Recommendations

Given the importance of standards-based assessment to education reform, and the importance of appropriate accommodations to the successful incorporation of ELLs into the current reform effort, the following two recommendations are warranted:

- 1. It would be appropriate for the U.S. Department of Education (ED) to provide leadership and support to states related to inclusion and accommodation of ELLs. A useful first step in this process would be for ED to host a national conference on ELL inclusion and accommodation policies and practices and on research related to these issues.
- 2. The inclusion and accommodation of ELLs should be an integral part of the training ED offers to states on the subject of standards and assessment. An issue that is an integral part of training is one that is considered in-depth and interwoven into all presentations.

### Original mailing sent to State Title VII Directors

Center for Equity and Excellence in Education

April 27, 1999

Name Organization Address City, State, Zip

Dear,

Since the reauthorization of the Elementary and Secondary Education Act in 1994, there have been substantial changes in the way states include Limited English Proficient (LEP) students in state assessment programs. States that formerly had no LEP inclusion policies have begun to develop these policies. LEP students who were routinely excluded from assessments in some states have begun to be included; and in some states state assessment policies allow LEP students to be accommodated as well.

Since each state is at a different point on this continuum, a variety of policies on inclusion and accommodation exist. In order to understand what policies are being implemented as states move towards greater accountability for LEP students, OBEMLA has asked the Region III Comprehensive Center at The George Washington University to analyze each state policy to provide insight into the level of inclusion and the types of accommodations offered to LEP students.

We have collected state policies and related documents available from the Council of Chief State School Officers and from state web sites. However, in order to be certain that the materials we analyze are as up-to-date as possible, we are requesting that you provide copies of your most recent state policies, guidance documents, and any other documents intended to help districts implement state policies. The items we are requesting are listed on the attached form. Please return it with your documents to Ms. Barbara Hicks using the enclosed address label by May 21, 1999.

In the next phase of the study, we will identify districts that routinely include and accommodate LEP students in ways that can be adopted or adapted by other districts and schools. You will be contacted later to make nominations in this category, so please be thinking about the districts in you state.

Should you have any questions or need further clarification on what we are requesting, please call Barbara Hicks at 1-800-925-3223, or email her at *bhicks@ceee.gwu.edu*. We look forward to sharing the results of this study with you when our analysis is complete. Thank you very much for your help.

Sincerely,

Charlene Rivera Director

### UNITED STATES DEPARTMENT OF EDUCATION

## OFFICE OF BILINGUAL EDUCATION AND MINORITY LANGUAGE AFFAIRS

### Dear Title VII SEA Director:

The Office of Bilingual Education and Minority Language Affairs (OBEMLA) is seeking to learn more about the implementation of state policies for including and accommodating limited English proficient (LEP) students in state required assessment programs. While some states have provided their policies to the Council of Chief State School Officers (CCSSO) in response to the annual survey of state assessment directors, the file is not complete and not always up-to-date. We have also searched state web sites to find updated policies and, have found only a few states that have posted them. Therefore, OBEMLA has asked the Region III Comprehensive Center at The George Washington University to collect and analyze the most recent state assessment policies available. I would like to make a personal appeal to you to participate in this important study by providing the information requested.

Enclosed you will find a sheet detailing the information requested by the investigators, along with other directions. All information is to be returned directly to the research team at The George Washington University. If you have any questions, please feel free to contact Dr. Charlene Rivera, the primary investigator (703/528-3588) or Milagros Lanauze at OBEMLA (202/205-9475).

I am hoping to hear that all Title VII Directors have contributed data to this important project. The more we can learn about how LEP students are faring in state assessment programs now, the better advocates we can be for them in the future.

Sincerely,

Delia Pompa Director

### Second mailing sent to State Title VII Directors

Center for Equity and Excellence in Education

August 23, 1999

«Title» «FirstName» «LastName» «JobTitle» «Company» «Address1» «Address2» «City», «State» «PostalCode»

#### Dear «Title» «LastName»:

In May, I wrote you announcing that the Center for Equity and Excellence in Education had received funding from OBEMLA to conduct a study of state policies concerning the inclusion of LEP students of English language learners (ELLs) in state assessment systems. You were kind enough to provide me with your state's policy documents concerning LEP student inclusion in statewide assessments. Based on the documents sent, we have completed the attached report on your state. The first part of the report contains a description of the documents sent. The second part is a series of questions that we answered based on the information contained in these documents.

In order to verify that our information on your state is correct, we are requesting that you review the attached report. A description of the state report and instructions for reviewing the state report are found in this packet. After we have revised and finalized the report for your state, we will send you a copy. Later, once the entire study is complete, we will communicate the results to you.

Thank you again for your cooperation. We hope the information gathered from this joint effort will help us to be better understand assessment issues that need to be addressed for LEP.

Sincerely,

Charlene Rivera Director

Graduate School of Education and Human Development
1730 North Lynn Street • Suite 401 • Arlington, VA 22209 • (703) 528-3588 • Fax (703) 528 5973

# Policies and Practices Related to Inclusion and Accommodation of LEP Students in State Assessment Systems

Instructions for reviewing state reports

First, **please fill out the form below** so that we know who has reviewed the report, and so we will have contact information should we need further clarification of an item.

Second, read the next page on the Format of State Report on Inclusion and Accommodations and familiarize yourself with the format of the report.

Third, carefully examine your state report. If there are no corrections or additions to be made, please initial and fax (703-528-5973) this page me as soon as possible, but no later than September 9.

If there are changes to be made, please follow the following steps.

- 1. Circle any information that should be deleted and mark it with a D.
- 2. Use **blue** or **black ink** to make any **corrections or additions** directly on the report, if possible. If limited space does not allow you to make these changes directly on the report, you may add an additional page of explanation. Please refer clearly to each question that you are addressing by using the question's number and/or repeating the question itself.
- 3. When making **corrections** or **additions** directly on the report, please **write** and identify them **clearly** so they can be easily read and understood.
- 4. For each correction or addition made, please indicate the state document(s) and the page(s) on which this information appears. If the document isn't among those already submitted, please submit a photocopy of the document with the relevant pages marked. In order for us to make changes to the completed report, we must have a copy of the relevant document where that information can be found.
- 5. Fax or mail your corrections in the enclosed self-addressed envelope. Please **complete and initial this page and include it with your corrected report** so we know who has reviewed the report should we have questions about the corrections. Please **return your corrections as soon as possible** or so that they **arrive** to us no later than **September 9, 1999.**

# Policies and Practices Related to Inclusion and Accommodation of LEP Students in State Assessment Systems Description of Format of State Report on Inclusion and Accommodations

Your state report is not a report to the state. Instead, it is the pages that relate to your state in our national database on inclusion and accommodation policies. The information in this database is objectively coded and categorized so that national totals can be calculated based on the information provided by each state. Your state report is in the format of a completed questionnaire. The questionnaire was completed based on information taken from the state policies you sent to us. An important feature of this research project is that the information that goes in the database must come from written policy statements or publications.

The first part of your state report consists of one or more pages labeled **State Documents**. These pages catalogue and describe the documents submitted by each state. An important feature of the State Documents page is that it identifies the location within each document of the various policies and practices that are relevant to inclusion and accommodations. Thus, the State Documents page(s) serve as a bibliographic reference on documents concerning state policies. Since the State Documents pages do not represent policies, the information on these pages will not be part of any national totals or tabulations.

The second part of the report is on numbered pages (1-4) in question/answer format. It consists of responses to 13 questions. The answers are brief and objective, but space is included at the bottom of each page for descriptive and qualitative elaboration.

Page 1 is labeled **LEP Inclusion/Accommodation Overview**. This page provides general information on the kinds of policies (inclusion, accommodations, score reporting, alternate assessment) the state has established for LEP students. Comments or information concerning a specific question are found in the box at the bottom of the page. The reference for each comment is identified by the letter Q. For example, a comment following up on question 3 is identified by Q 3.

Page 2 is labeled **Inclusion/Exemption Information**. This page begins with the state's definition of an LEP student, if the state has one. The two additional questions (numbers 9 and 10) on this page ask who makes the inclusion decision and what are the criteria used to make the decision.

Page 3 is labeled **Accommodations Information (1).** This page also contains the answers to two questions. The questions relate to the specific accommodations each student may receive and the criteria that are used to make decisions regarding eligibility for and provision of specific accommodations. A box at the bottom of the page is used to provide further information concerning the response to each question. A specific accommodation is identified by its letter or number in the Comments box.

Page 4 is labeled **Accommodations Information (2)** and contains information related to specific accommodations that are allowable within the state assessment system. Numbers (1, 2, 3, and 4) are used to identify whether each specific accommodation is allowed or prohibited on some or all assessments.

Letters (a, b, c, and d) are used to indicate whether specific accommodations affect the inclusion of scores in state, district, and school totals. In some states, the provision of specific accommodations (such as extended time) is allowed, but when this is done, the student's scores are not included in the school and district totals that are released to the press and the public. Whether LEP student scores are included in school and district totals is identified for each specific accommodation by the letter c or d. For example, if extended time is allowable on all assessments, but results in exclusion of student scores from school and district totals, then this is indicated by "1d" in box 19 on page 4. Additional comments on the allowable or prohibited accommodations can be found in the box at the bottom of page 3.

### Mailing sent to State Assessment Directors

«JobTitle»

«Company»

«Address1»

«Address2»

«City», «State» «PostalCode»

### Dear «Title» «LastName»:

Since the reauthorization of the Elementary and Secondary Education Act in 1994, there have been substantial changes in the way states include Limited English Proficient (LEP) students in state assessment programs. States that formerly had no LEP inclusion policies have begun to develop such policies. LEP students who were routinely excluded from assessments in some states have begun to be included; in some states, state assessment policies allow LEP students to be accommodated, as well.

A variety of policies on inclusion and accommodation exist because each state is at a different point on this continuum. In order to understand what policies are being implemented as states move towards greater accountability for LEP students, the Office of Bilingual Education and Minority Languages Affairs (OBEMLA) of the US Department of Education has asked the Region III Comprehensive Center at The George Washington University to document each state's inclusion policy and the types of accommodations offered to LEP students for the 1998-1999 school year.

In May 1999, we requested documents containing state policies on LEP inclusion and accommodation in your state's assessment system from the Title VII Bilingual or ESL director. Based on the documents submitted, we completed an analysis of state assessment policies, prepared a report and sent each state's report to the appropriate Title VII or ESL director for review. Revisions were made to individual state reports and to the whole report based on reviewers' comments and supporting documentation.

Since assessment directors have a global understanding of the states assessment policies, we would like to ask you to review your individual state report for accuracy. The report represents our analysis of policies in your state, as described in the state documents provided. The purpose of the review is to identify any areas where there may be inaccuracies in our interpretation of the policies. As you review the report, please note that the focus of the report is on policies in place during the 1998 –1999-school year. In order to make changes to your state report, the change must be supported by appropriate documentation. Please note that no changes will be made to the report without documentation.

Since this study is scheduled for completion in March, we must receive your feedback **no later than February 18.** Please **return the enclosed form that indicates you have reviewed the report.** You may fax if to 703-528-5973. If there are changes to the report, the report and any supporting documentation can also be faxed. If documents are difficult to fax, please send them **together with a copy of the form indicating you reviewed the report and the corrected state report** via Federal Express to:

Ms. Theresa Bui The George Washington University Center for Equity and Excellence in Education 1730 North Lynn Street, Suite 401 Arlington, VA 22209

Should you have any questions or need further clarification on what we are requesting, please email me at crivera@ceee.gwu.edu or call me at 1-800-925-3223.

Thank you for your participation in ensuring the accuracy of the information we provide to OBEMLA. We look forward to sharing the results of this study with you.

Sincerely,

Charlene Rivera Director

## Policies and Practices Related to Inclusion and Accommodation of LEP Students in State Assessment Systems

Instructions for reviewing state reports

- 1. Please read the next page, Format of State Report on Inclusion and Accommodations to become familiar with the format of the state report for accuracy. .
- 2. Carefully examine your state report for accuracy. If there are no corrections or additions to be made, please initial and fax (703-528-5973) the form to Theresa Bui as soon as possible, but no later than February 18.

If there are changes to be made, please follow these steps.

- Circle any information that should be deleted and mark it with a D.
- Use **blue** or **black ink** to make any **corrections or additions** directly on the report, if possible. If limited space does not allow you to make these changes directly on the report, you may add an additional page of explanation. Please refer clearly to each question that you are addressing by using the question's number and/or repeating the question itself.
- Please write and identify corrections or additions clearly on the report. Please, only make changes to the state report that relate to the 1998-99 school year.
- Please indicate the state document(s) and the page(s) for each correction or addition made. If the document is not among those already submitted, please include a copy of the document with the relevant pages marked. In order for us to make changes to the completed report, we must have a copy of the relevant document where that information can be found. Please only submit documents that relate to the 1998-99 school year.
- Fax or send your corrections using Federal Express, account number 1885-5541-1. Please complete, initial, and include this page with your corrected report. Please return your corrections so that we receive them no later than February 18, 2000.

Thank you.

# Policies and Practices Related to Inclusion and Accommodation of LEP Students in State Assessment Systems Description of Format of State Report on Inclusion and Accommodations

Your state report is not a report to the state. It is the information taken from the state documents that relates to your state's inclusion and accommodation policies. The information is objectively coded and categorized so that national totals can be calculated based on the information provided by each state. Your state report is in the format of a completed questionnaire. An important feature of this research project is that the information included in the report must come from written policy statements or publications.

Part one of the report, Sections I - IV consists of 13 responses. The answers are brief and objective, but space is included at the bottom of each page for descriptive and qualitative elaboration.

Section I is labeled **LEP Inclusion/Accommodation Overview**. This page provides general information on the kinds of policies (inclusion, accommodations, score reporting, alternate assessment) the state has established for LEP students. Comments or information concerning a specific item are found in the box at the bottom of the page. The letter Q identifies the reference for each comment. For example, Q 3 identifies a comment following up on item 3.

Section II is labeled **Inclusion/Exemption Information**. This page begins with the state's definition of an LEP student, if the state has one. The two additional items (numbers 9 and 10) on this page ask who makes the inclusion decision and what criteria are used to make the decision.

Section III is labeled **Accommodations Information (1).** This page contains information on two items. The items relate to the specific accommodations each student may receive and the criteria that are used to make decisions regarding eligibility for and provision of specific accommodations. A box at the bottom of the page is used to provide further information concerning the response to each item. Its letter or number in the Comments box identifies a specific accommodation.

Section IV is labeled **Accommodations Information (2)** and contains information related to specific accommodations that are allowable within the state assessment system. Numbers (1, 2, 3, and 4) are used to identify whether each specific accommodation is allowed or prohibited on some or all assessments.

Letters (a, b, c, and d) are used to indicate whether specific accommodations affect the inclusion of scores in state, district, and school totals. In some states, the provision of specific accommodations (such as extended time) is allowed, but when this is done, the student's scores are not included in the school and district totals that are released to the press and the public. Whether LEP student scores are included in school and district totals is identified for each specific accommodation by the letter c or d. For example, if extended time is allowed on all assessments, but results in exclusion of student scores from school and district totals, then this is indicated by "1d" in box 19 in Section IV. Additional comments on the allowable or prohibited accommodations can be found in the box at the bottom of Section III.

The second part of your state report, Section V, consists of one or more pages labeled **State Documents**. These pages catalogue and describe the documents submitted by each state. An important feature of the State Documents page is that it identifies the location within each document of the various policies and practices that are relevant to inclusion and accommodations. Thus, the State Documents page(s) serves as a bibliographic reference on documents concerning state policies.

### Appendix C

State policies regarding alternate assessments

### Alternate Assessment Policies

To provide a more detailed and accurate description of state policies regarding alternate -- and "alternative" -- assessments, policies of the individual states are provided in Appendix C. In a few cases, state policies are summarized. In the majority of cases, the policy is stated verbatim from the state documents. This is done to avoid any misrepresentation of the intent of the state policies caused by the variability in usage of the terms "alternate" and "alternative."

The description of each state's policy includes a statement regarding whether and how scores from alternate assessments are to be reported.

Arkansas: "All students enrolled in a statetested grade shall be accounted for in the state assessment system, either by participation in the standard assessments or the authorized alternate assessment."

"Limited English proficient (LEP) students may participate in the alternate assessment program for a period which shall not exceed three (3) years before entering the standard state assessment."

"Scores for ... English language learners participating in the Arkansas Alternate Assessment Program shall be reported by the state/district/school in separate reports at all levels."

Arizona: "The only exemption from state tests will be for those students (probably 1 or 2 percent of the total student population) whose Individualized Education Plans exempt them from participating."

"The instructional program for limited English proficient pupils who are exempt from the nationally standardized norm-referenced achievement testing requirement ... shall include an alternative assessment of achievement to be administered annually."

Aprenda 2 is offered for Spanish-speaking students.

For students who are already exempted and whose parents have requested that their

children be tested, the Stanford 9 test, with accommodations, can be offered. Districts may also select any other alternate assessment, including district assessments, as a substitute for the Stanford 9 test for students that are already LEP exempt.

No further information is provided. Score reporting is not addressed.

Illinois: "ISBE has developed the Illinois measure of Annual Growth in English (IMAGE) tests. IMAGE tests measure reading and writing proficiency in English and are given to bilingual students in grades 3, 4, 5, 6, 7, 8, 9, 10, and 11 who do not meet the criteria for ISAT/IGAP [the standard state assessments]."

"Bilingual students who have been in a state-approved TBE or TPI program since at least September 30 of the school year, but less than 3 full and continuous academic years (and who do not have sufficient English language skills to take ISAT/IGAP) are required to take the IMAGE tests appropriate for their grade."

"IMAGE scores are not included on the annual School Report Card."

Kentucky: "The student with limited English proficiency who has been in an English-speaking school for fewer than 2 years preceding the year of assessment in question may be exempted from the portfolio assessment. This student may submit a portfolio in a language other than English if:

- \* the student's daily instruction and class work are conducted in the student's native language, and
- \* the local scorer or a scorer hired by the district is both fluent in that language and trained to score the portfolio."

Score reporting is not addressed.

Montana: All accredited schools are required to "provide alternate tests for students who are excluded from taking the regular test."

Other documents provided include substantial amounts of information on many

Appendix C.2

aspects of different types of alternate and alternative (nontraditional) assessments available, as well as a discussion of the differences between alternate and alternative assessments

The state allows the local schools to decide upon the alternate assessments to be used.

Score reporting for the 1998-99 school year is not addressed.

North Carolina: "Although a student may be exempted because of limited English proficiency, the school system will need to assess the progress of these students using other assessment methods in order to show that the students are progressing in English, as well as in their other subject areas."

"A student who is exempted from statewide testing must still have his/her progress assessed in English and other subject areas using alternative assessment methods. The choice of the assessment method is up to the local school system. The alternative assessment may include portfolios and other authentic assessment methods."

The following statement appears in other sections of the guidelines document: "All completed tests must be scored and included with the other tests at the appropriate grade level."

There is no specific reference to score reporting for "alternative" assessments.

North Dakota: "All limited English proficient (LEP) students shall participate in the state-wide achievement testing program except those students who score at level 1 as determined by the [name of commercially published language proficiency test] or similarly designed test ... If a student does not participate in the statewide achievement testing program, the school must provide an alternative form of academic achievement assessment."

Score reporting is not addressed.

New Jersey: "... when students are exempted from specific testing situations, alternative means must be used to assess these students' mastery of essential skills.

A special effort should be made to use assessment procedures that are based in the student's native language and that can provide a reasonable, valid assessment of the student's mastery level. This could include the following:

\*Native language achievement tests;

\*Teacher-made and criteria-referenced tests in the native language;

\*Assessments made with the assistance of an individual proficient in the students' native language;

\*Assessment in the English language administered under the supervision of a certified teacher or guidance counselor;

\*Performance assessment; and/or

\*Writing samples and other classroom work from the student."

Score reporting is not addressed.

New Mexico: For the Reading Assessment (grades 1, 2): "Students exempted from this assessment due to the language assessment should be given an appropriate alternative assessment in the home language."

For the New Mexico Achievement Assessment Program (grades 4, 6, 8): "Students exempted from this assessment due to limited English skills ... must be assessed with a standardized test in a language appropriate for each student."

For the New Mexico Writing Assessment Program (grades 4, 6, optional at grade 8): "No student should undergo a modified administration of the writing assessment due to limited English skills, but rather should have an appropriate alternative assessment in the home language."

For the New Mexico High School Competency Exam (NMHSCE): "Alternative assessment procedures, used to determine student mastery of necessary content competencies in lieu of taking or passing the NMHSCE ... may include, but need not be the following examples: Iimited to.

coursework grades; scores obtained on outof-state high school competency/proficiencytype tests; written recommendations from current teachers in the appropriate content areas; and, results of other appropriate tests, exams, exhibits and/or demonstrations of student performance."

Score reporting is not addressed.

Ohio: There is an "alternative administration" of the 9<sup>th</sup> grade tests in reading, mathematics, and citizenship, but not writing. The alternative administration is an *oral* administration of the test.

Score reporting is not addressed.

<u>Oregon:</u> The documentation lists three options for ELL participation in state assessments:

- \*Tested under standard conditions:
- \*Tested under modified conditions; or
- \*Exempted.

In another section of the same document, there is a description of another form of the state tests -- Form "E". There is no indication which of the above options Form "E" test administration falls under, if any.

"Form "E" versions of the state tests are available at grades 3, 5, and 8, in Reading/Literature and Mathematics only. These versions are intended to provide more accurate scores for those students likely to respond to fewer than 30% of answers correctly."

"The Spanish-English "E" form of the Mathematics test should be used with those students whose mathematical content knowledge is significantly below grade level. Form "E" does not reduce the amount of 'language' on the test."

"Students scoring 1 or above in English, Spanish, or Russian [on a language proficiency test] are eligible to participate using a Bilingual version of the mathematics test."

For 1999, Bilingual Spanish-English and Russian-English versions of the Mathematics test will be available.

Score reporting for use of the "E" forms is not addressed

<u>Texas:</u> "LEP students who are exempted from TAAS (Texas Assessment of Academic Skills) must be given an alternative assessment."

"Alternative assessments can be selected from the list of state-approved tests, or released TAAS tests from previous administrations may be used when appropriate. For the few students who may not be literate and for whom paper and pencil tests may not be valid, portfolio assessments may be used."

"The alternative assessment results should be kept in the student's permanent record."

Score reporting is not addressed.

<u>Vermont:</u> The documents describing assessment options are inconsistent in precision of language used. In many areas, information is presented in precise terms and has clear meaning. In other areas, ambiguous language impedes thorough understanding. Relevant information can be found in the following excerpts.

"Alternate assessment options include:

\*Modified assessments. These have the same content standards and performance standards of the regular assessment, but are available for students who cannot be accommodated in the regular assessment;

\*Adopted assessments. These have the same content standards, but at lower performance standards, than the regular assessment;

\*Functional Lifeskills assessments. These are not available for ELLs.

For all of the above options, "scores are not aggregated, but reported separately and with the same frequency and in the same detail as regular assessment results."

One document lists the following definitions:

"Accommodated assessment. The standards (knowledge, skills, habits of mind)

being measured are the same as those being measured on unaccommodated assessments.

"Alternative assessment. The standards being measured are derived from the student's individual curricula."

Other documents offer information regarding the development of a set of performance-based assessment instruments for ELLs and Culturally and Linguistically Different (CLD)/Language Minority Students.

<u>Wisconsin:</u> "Students who do not participate in the WKCE [Wisconsin Knowledge and Concepts Examinations], grades 8, 10, must receive an alternate assessment."

"Locally developed alternate assessments offer the 'best practices' solution for full inclusion of students with limited English proficiency at the early English language proficiency levels."

Wisconsin has developed Alternate Performance Indicators (API). APIs are in a transitional stage, from "assessments of language proficiency to assessments that present a clearer picture of students' academic skills as well as students' readiness for participating in WKCE."

The documents do not specify the existing score reporting policy, but suggest that as APIs are developed, use of rubrics and other forms of documenting student performance should be uniformly implemented across classrooms with a focus on alignment with the scoring of the statewide tests.

Wyoming: "Limited English proficient (LEP) students attending schools in the U.S. for 2 years or less may be exempt from the statewide assessment. LEP students who exempted from the statewide assessment must be tested for English proficiency. In cases when an LEP student is unable to respond to a published assessment in English, the district should use an alternative method of assessment to ascertain how much the child understands in English as well as his/her content knowledge in the home language. When an appropriate test does not exist for a particular language, an alternative assessment should be administered in the native language of the child, if possible."

Score reporting is not addressed.

# Appendix D

Individual State Reports

Section 1. Policy Overview	
State: AK	Year: 98/99
1. The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	NO
2. State policy allows exemptions for LEP students for a specific amount of	time. NO
3. If "YES," the longest possible period of exemption is:	
4. State policy allows accommodations in state assessments for LEP stude	ents. N/A
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	N/A
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	N/A
7. State policy allows alternate (alternative) assessments for LEP students whom the regular assessment, even with accommodations, is not appropriate	
8. If "YES," state policy specifies alternate (alternative) assessments.  *"N/A" means "Not addressed."	

# Comments related to questions 1-8

In the document provided, there is no indication that Alaska has any policy regarding the participation and accommodation of LEP students in statewide assessments.

Section 1. Policy Overview*	
State: AL Year:	98/99
The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of time.	YES
3. If "YES," the longest possible period of exemption is:  Two years	
4. State policy allows accommodations in state assessments for LEP students.	YES
State policy prohibits specific accommodations from being offered in state assessments for LEP students.	YES
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	N/A
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	N/A
8. If "YES," state policy specifies alternate (alternative) assessments.	

## Comments related to questions 1-8

\*"N/A" means "Not addressed."

- Q 2, 3. For all tests except the High School Basic Skills Exit Exam (HSBSEE) and the Alabama High School Graduation Exam (AHSGE), two years of exemption are allowed. For the HSBSEE and the AHSGE, a deferment is allowed. For the HSBSEE and AHSGE, a student can not request one additional year of deferment. For all other state assessments, students can request one additional year of exemption.
- Q 5. Accommodations which change the nature, content, or integrity of the test, such as reading of a reading test designed to assess the skill of reading, are not allowed.

The documents provided indicate that Alabama offers no specific guidelines for accommodations criteria or for alternate assessments for LEP students exempted from state assessments.

Section 2. Inclusion and Exemption Policies*				
State: AL	Year:	98/99		
LEP Definition: Source of defini	tion·** [	FR		
LEP Definition:  A limited English proficient student is an individual:  (1) i. who was not born in the United States or whose native language is other than English;  ii. who comes from a home in which a language other than English is dominant; or  iii. who is an American Indian or Alaskan Native and comes from a home in which  a language other than English has had significant impact on his or her level of English language proficiency as a result of substantial use of that other language for communication; AND  (2) who, as a result of the circumstances described in paragraph (1) of the definition, has sufficient difficulty speaking, reading, writing, or understanding the English language to deny him or her the opportunity to:  i. learn successfully in classrooms in which the language of instruction is English; or

## Comments related to questions 1-8

- Q 3. Elementary students can appeal for one additional year.
- Q 7, 8. Students exempted from state assessments are required to participate in the Arkansas Alternate Assessment Program.

The documents provided indicate that, in Arkansas:

- \* There are no state guidelines for identifying LEP students;
- \* The state offers no specific criteria for inclusion or exemption of LEP students in state assessments;
- \* The state does not have a policy that allows accommodations in state assessments for LEP students.

Section 2. Inclusion and Exemption Policies\*

State: AR	Year:[	98/99		
LEP Definition:  A limited English proficient student is one who:  a. meets one or more of the following conditions: i. the student was born outside of the United States or whose native language is not English; ii. the student comes from an environment where a language other than English is dominant; or iii. the student is American Indian or Alaskan Native and comes from an environment where a language other than English has had a significant impact on his/her level of English language proficiency; and b. has sufficient difficulty speaking, reading, writing, or understanding the English language to deny him or her the opportunity to learn successfully in English-only classrooms.

Section 1 Policy Overview\*

#### State Inclusion and Accommodation Policies for LEP Students

Coolin II I chay Ordi Noll		
State: AZ Year	: 98/99	
1. The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES	
2. State policy allows exemptions for LEP students for a specific amount of time.	YES	
3. If "YES," the longest possible period of exemption is:  Three years	S	
4. State policy allows accommodations in state assessments for LEP students.	YES	
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.		
6. State policy specifies that when certain accommodations are used,  N/A		
scores are not included in state, district and/or school totals.		
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	YES	
8. If "YES," state policy specifies alternate (alternative) assessments.	YES	

#### Comments related to questions 1-8

- Q 3. The first year of exemption is the first academic year in which the pupil is enrolled in this state in grade 2 or above.
- Q 8. Aprenda 2 is offered for Spanish speaking students.

\*"N/A" means "Not addressed."

Q 8. For students who are already exempted and whose parents have requested that their children be tested, the Stanford 9 Test with the following accommodations (see the "Accommodations Information - 2" page) can be offered: 2, 6, 10 ("Teacher interprets/simplifies language"), 15, 16, 17, 19, 20, 23. Districts may also select any other alternate assessment, including district assessments, as a substitute for the Stanford 9 Test for students that are already LEP exempt.

The documents provided indicate that, in Arizona, while there is a detailed system for identifying and placing LEP students, the system for addressing the participation and accommodation of LEP students in statewide testing is defined by policies and guidelines that do not specifically address inclusion, exemption, and accommodations criteria, or specify a detailed decision-making process.

Comments related to questions 9 & 10

Q 10, #2. If less than 3 years, the student is eligible for exemption. If more than 3 years, the student should participate in citywide assessment, regardless of LAS category. The local school determines whether such students should participate in the SAT-9 under level 2 (Standard conditions with special accommodations), or level 3 (Non-standard conditions with permissible accommodations). School-based staff may also make a decision regarding the student's participation in citywide testing that falls outside of recommended guidelines.

Q 10, #4. Not specified.

4. State policy allows accommodations in state assessments for LEP students.	YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	NO
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	YES
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	N/A
8. If "YES," state policy specifies alternate (alternative) assessments.	
*"N/A" means "Not addressed."	

## Comments related to questions 1-8

Q 3. Expressed as one test administration.

The document provided indicates that Delaware has established policies regarding the participation and accommodation in statewide assessments of LEP students. In certain other areas -- accommodations criteria, selection of a decision-making team, alternate assessments -- the state does not offer specific guidelines.

Section 2. Inclusion and Exemption Pol	licies"

8. If "YES," state policy specifies alternate (alternative) assessments.  *"N/A" means "Not addressed."	

#### Comments related to questions 1-8

The documents provided indicate that, in Florida:

<sup>\*</sup> The Florida Writing Assessment Program administered in 1999 is a census test, given to randomly selected students from around the state;

<sup>\*</sup> The state offers no specific guidelines regarding selection of committee members for deciding LEP student participation in statewide assessments.

<sup>\*</sup> Unless a LEP student has been enrolled in an approved district LEP Plan for 2 years or less, the student must be included in statewide assessments;

<sup>\*</sup> There are no alternate or alternative assessments available to LEP students.

Section 2. Inclusion and Exemption Policies*					
State: FL	Year: 98/99				
LEP Definition:	Source of definition:** FR				
Language Enriched Pupils or Limited English Proficient students:  * Individuals who were not born in the U.S. and whose native language is a language other than English; or  * Individuals who come from home environments where a language other than English is spoken in the home; or  * Individuals who are American Indian or Alaskan natives and who come from environments where a language other than English has had a significant impact on their level of English language proficiency; and  * Individuals who, by reason thereof, have sufficient difficulty speaking, reading, writing, or listening to the English language to deny such individuals the opportunity to learn successfully in classrooms where the language of instruction is English.					
9. The decision regarding LEP student inclusion	/exemption is made by:				
State policy addresses this issue. YES	e. School/district official(s)

#### Comments related to questions 11-13

Q 13, #10, b. Available for the Mathematics test. If the Mathematics test is administered to a group, the teacher may answer questions about directions for the benefit of the whole group. Questions of clarification from individual students must be answered on an individual basis. For the Reading test, an ESOL or heritage language teacher may answer questions about general test directions, but is prohibited from answering students' questions and from reading words to students from passages, test items, and performance tasks.

Q 13, #19. Available for the Writing test. No specific time limit indicated.

Section 1. Policy Overview*	
State: IL Year	: 98/99
The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of time.	YES
3. If "YES," the longest possible period of exemption is:  Three year	s
4. State policy allows accommodations in state assessments for LEP students.	NO
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	YES
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	N/A
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	YES
8. If "YES," state policy specifies alternate (alternative) assessments.  *"N/A" means "Not addressed."	YES

#### Comments related to questions 1-8

- Q 4, 5. The only mention of accommodations allowed or prohibited is that translation of any part of a state test is prohibited.
- Q 8. For grades 3 11, the Illinois Measure of Annual Growth in English (IMAGE) tests, which measure reading and writing proficiency in English, are required of all students not taking state assessments.

The documents provided indicate that, in Illinois:

- \* 1999 marks the beginning of a transition from using the Illinois Goal Assessment Program (IGAP) to using the Illinois Standards Achievement Test (ISAT) as the statewide assessment program;
- \* The state offers no guidelines for defining or identifying LEP students;
- \* The state offers no specific recommendations for selecting decision-makers, nor for English language proficiency assessments, for determining inclusion, exemption, or placement in an appropriate services program;
- \* The "alternate" assessment described is, in fact, a language assessment;
- \* There is no specific state policy that allows accommodations in state assessments for LEP students.

Section 1. Policy Overview*	
State: KY Year:	98/99
<ol> <li>The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.</li> </ol>	YES
2. State policy allows exemptions for LEP students for a specific amount of time.	YES
3. If "YES," the longest possible period of exemption is:  Two years	
4. State policy allows accommodations in state assessments for LEP students.	YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	YES
State policy specifies that when certain accommodations are used,	NO
scores are not included in state, district and/or school totals.	INO
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	YES
8. If "YES," state policy specifies alternate (alternative) assessments.	NO

#### Comments related to questions 1-8

Q 6. Scores of all LEP students, including those who received accommodations, are included.

Q 7, 8. For the Writing Portfolio assessment (grades 4, 7, 12), there is an alternate assessment, the Alternate Portfolio Program. Students may submit a portfolio in a language other than English if: a) the student's daily instruction and class work are conducted in a language other than English, and b) the local scorer or a scorer hired by the district is both fluent in that language and trained to score the portfolio. There is no alternate assessment for the Kentucky Instructional Results Information System (KIRIS) assessments.

One reviewer from the state wrote that the name of the assessment system is the Commonwealth Accountability Testing System (CATS), though there is no indication of this in the documents provided.

The documents provided indicate that, in Kentucky:

\*"N/A" means "Not addressed."

<sup>\*</sup> The state policies regarding decision-makers, inclusion/exemption and accommodations criteria, and alternate assessments are generally non-specific, requiring local school districts to develop more specific local policies regarding participation and accommodation of LEP students in statewide assessments.

## Comments related to questions 1-8

The documents provided indicate that:

\*"N/A" means "Not addressed."

Section 1 Policy Overview\*

<sup>\*</sup> For the 1998 assessments, LEP student scores were included with those of the other students, and also were disaggregated for diagnostic purposes;

<sup>\*</sup> Beyond offering a Spanish version of certain subtests, Massachusetts has no policy for allowing accommodations for LEP students in statewide testing, nor is there a policy for providing alternate or alternative assessments for LEP students.

Section 2. Inclusion and Exemption Policie	ies*			
State: MA	Year: 98/99			
LEP Definition:	Source of definition:** Other			
LEP students:  1) Students who were not born in the U.S. whose native language is a language other than English and who are currently not able to perform ordinary classroom work in English, or  2) Students who were born in the U.S. to non-English speaking parents and who are not currently able to perform ordinary classroom work in English.

#### Comments related to questions 11-13

- Q 11, 12, 13. Massachusetts has no policy that allows accommodations in state assessments for LEP students other than a Spanish version of the mathematics, science and technology, history, and social science tests.
- Q 13, #8. Available for the mathematics, science and technology, history, and social science tests. The Spanish versions of these tests can be taken if a student has three or fewer years in U.S. schools; is currently enrolled in a Transitional Bilingual Education program or receives ESL support and will not be recommended for regular education classes for the following school year; and the student possesses reading and writing skills in Spanish.
- Q 13, #11. Available for Spanish versions of tests.
- Q13, #19. There are no time limits on the Massachusetts Comprehensive Assessment System (MCAS). This condition applies to all students, not only ELLs.

4. Formal assessment of English proficiency	10. Routine classroom accommodations	
5. Informal assessment of English proficiency	11. Other(s)	
*"Y" means "Yes, state policy mentions this item."		
Comments related to questions 11-13  Q 11. Documents provided also indicate that an LEP committee (whose members are not specified) make the decisions on specific accommodations, for all state assessments.		
Q 12, #4. Assessment is not specified.		
Q 13, #10. For the MSPAP, the following accommodations are available: a) Verbatim reading of selected section of test or vocabulary; b) Verbatim audiotape of directions; c) Verbatim reading of entire test to the student. For the MSPAP and the MFRT, the following accommodations are available: d) Written copies of orally presented materials; and e) Verbatim audiotape of the test, for which a student's reading score is invalidated in the scoring process.		

Q 13, #19. MSPAP time extensions must allow for participation in group activities. CTBS/5 time extensions are seen as a non-standard administration which invalidate comparisons to national norms, and therefore will not be included in state reports.

5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	NO
6. State policy specifies that when certain accommodations are used,	N/A
scores are not included in state, district and/or school totals.	
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	NO
8. If "YES," state policy specifies alternate (alternative) assessments.	

# Comments related to questions 1-8

Q 7. There are no alternative assessments for statewide assessments. There is a policy that allows for alternative assessments, to be chosen by a local committee, for the High Standards diploma.

The documents provided indicate that, in Minnesota, while the state provides a skeletal framework of items for districts to consider as the districts look to identify and decide on participation and accommodation of LEP students in statewide testing, there are only a few instances of specific statewide guidelines or policies. It seems that this failure on the part of the state to provide specific policy and/or guidelines shifts the responsibility of developing an appropriate system to the local level.

Section 2. Inclusion and Exemption Policies*
State: MN Year: 98/99

State: MS Year:	98/99
1. The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of time.	YES
3. If "YES," the longest possible period of exemption is:  Two years	
4. State policy allows accommodations in state assessments for LEP students.	YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	YES
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	YES
7. State policy allows alternate (alternative) assessments for LEP students for	
whom the regular assessment, even with accommodations, is not appropriate.	N/A
8. If "YES," state policy specifies alternate (alternative) assessments.	

#### Comments related to questions 1-8

\*"N/A" means "Not addressed."

These issues are addressed in a handbook prepared using Title IV and Title VII funds, The Participation and Accommodation of LEP Students in Statewide Assessment Programs, Handbook of Educational Services for LEP Students. As well as addressing educational issues, the handbook includes demographic data related to the location and number of LEP students in Mississippi schools.

The document states that "This handbook was developed to assist state educators in providing equal opportunities to limited English proficient students in Mississippi. The materials within should provide educators with information on appropriate and effective services for these students." It continues to explain that, based on the state's only relevant mandate, districts must design programs that "enable their LEP students to achieve full competence in English and to meet school grade-promotion and graduation requirements." PL 100-297, section 7002.(a) The handbook quotes O'Malley and Valdez-Pierce (1991), "By participating in statewide testing programs, LEP students can be followed to ensure that they meet grade-appropriate standards at all levels and graduate from high school."

Section 2. Inclusion and Exemption Policies*	
State: MS	Year: 98/99
LEP Definition:	Source of definition:** IASA
A limited English proficient individual is one who:	
	age is a language other than English and comes from an
environment where a language other than English is domi	nant; or lent of the outlying areas and comes from an environment where a
language other than English has had a significant impact of	on such individual's level of English proficiency; or
<ul> <li>is migratory and whose native language is other than Er</li> </ul>	nglish and comes from an environment where a language other
than English is dominant; and	sunderstanding the English language and whose difficulties were
deny such an individual the opportunity to learn successful	r understanding the English language, and whose difficulties may lly in classrooms where the language of instruction is English, or to

State policy addresses this issue. YES	6. Performance in school work
1. Time in U.S.	7. Performance on other test(s)
Time in U.S. schools/English speaking schools	Academic background in home language
3. Time in this state's schools	Language program placement
4. Formal assessment of English proficiency	10. Teacher observation/recommendation
5. Informal assessment of English proficiency	11. Other(s) Parent's approval needed for exemption.
* "Y" means "Yes, state policy mentions this item."	

#### Comments related to questions 9 & 10

Q9/10 LEP students are expected to participate in all aspects of the Mississippi Assessment System (MAS). Students must take the Functional Literacy Examination (FLE) in order to receive a regular high school diploma. Exemptions seem to be offered for the lowa Test of Basic Skills (ITBS), the Stanford Achievement Tests (SAT), and the Mississippi Career Planning and Assessment System (MIS-CPAS). Students can be exempted from the Subject Area Testing Program (SATP). Exemption is based primarily on language assessment (whether or not the student's level of English significantly interferes with test results).

School districts may develop their own inclusion/exemption criteria. It is recommended that districts form LEP assessment committees composed of the district test coordinator, counselor(s), teacher(s), psychometric personnel and principal(s).

Q10 #4 Multiple measures are recommended; the handbook lists many possibilities.

Q10 #5 Multiple measures are recommended, including teacher observations and home language survey.

<sup>\*\* &</sup>quot;FR" means Federal Register (1984). "IASA" means Improving America's School Act (1994).

#### Comments related to questions 11-13

- Q11-13 "Mississippi Code 37-16-9 ensures that appropriate test modifications/accommodations are provided for eligible students. Test accommodations are considered changes in testing procedures that provide...LEP students with an equal opportunity to participate in test situations and to demonstrate their knowledge and abilities."
- Q11 Teachers recommend accommodation; school principal and district test coordinator authorize recommendation.
- Q13 The handbook suggests the following policies (Accommodations for both LEP students and students with disabilities are listed together.):
- 1) Accommodations must be consistent with what is provided on the student's instructional program.
- 2) Scores are not included when students who are exempt take the test or students choose to take the test using prohibited accommodations.
- 3) The list of prohibited accommodations is not meant to identify all prohibited accommodations. It is based on frequent inquiries. Scores from students who take the test under nonstandard test conditions are not comparable.
- 4) The student should be familiarized with testing procedures since his or her culture may not have provided extensive experience with standardized testing. Practice on items that have formats similar to those used with standardized testing is recommended. However, practice with actual test items, alternate test forms, or items closely parallel to actual test items is prohibited.

Tests: Iowa Test of Basic Skills/Test of Academic Proficiency (ITBS/TAP), Subject Area Testing Program (SATP), MS-Career Planning and Assessment System (MS-CPAS)

- Q13 #3 Prohibited on FLE, TAP, and CPAS (Reading for Information Test); Allowed on SATP & CPAS (except Reading for Information Test).
- Q13 #20 Prohibited on TAP & CPAS: allowed on SATP.
- Q13 #26 The use of native language dictionaries (dictionaries that translate English words into the native language without providing definitions) is prohibited on ITBS/TAP; native language dictionary use is allowed on SATP & MS-CPAS.

<sup>&</sup>quot;Y" means "Yes, state policy mentions this item."

Section 1. Policy Overview\*

#### State Inclusion and Accommodation Policies for LEP Students

State: MT Ye	ar: 98/99
1. The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of time	e. YES
3. If "YES," the longest possible period of exemption is:  Three ye	ars
4. State policy allows accommodations in state assessments for LEP students	YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	NO
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	N/A
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	YES
8. If "YES," state policy specifies alternate (alternative) assessments.	NO

### Comments related to questions 1-8

Q 8. "If participation in the regular assessment is waived, an alternative assessment must be administered. The alternative assessment should cover the same standards being assessed for all students; it must assess content knowledge in the student's primary language; if an assessment in the student's primary language is impracticable or inappropriate, accommodations can be used."

The documents provided indicate that, in Montana:

\*"N/A" means "Not addressed."

\* The state offers no specific guidelines for defining or identifying LEP students;

\* The state offers no specific guidelines for selecting members of the decision-making team involved with the participation of LEP students in statewide assessments, nor does it offer specific accommodations criteria or recommendations for alternate assessments.

Section 1. Policy Overview*	
State: NC Year:	98/99
The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of time.	YES
3. If "YES," the longest possible period of exemption is:  Two years	
4. State policy allows accommodations in state assessments for LEP students.	YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	YES
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	NO
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	YES
8. If "YES," state policy specifies alternate (alternative) assessments.	
o. II 125, state policy specifies alternate (alternative) assessments.	NO

## Comments related to questions 1-8

- $\ensuremath{\mathsf{Q}}$  3. Two years from the time of initial enrollment in the school system.
- Q 8. The choice of assessment method is up to the local school system. Alternate assessments may include portfolios and other authentic assessment methods.

The documents provided indicate that, in North Carolina:

\*"N/A" means "Not addressed."

- \* The state provides no specific recommendations regarding decision-makers;
- \* The state provides no specific guidelines regarding the identification of LEP students;
- \* The state provides no specific criteria for deciding on LEP student participation in statewide testing;
- \* The state provides no specific accommodations criteria, nor for alternate assessments.

Students can be exempted for 2 years from the time of enrollment in a school system. There is no indication that the state has in place a mechanism to prevent students from changing school systems every 2 years.

Section 2. Inclusion and Exemption Policie	es*

Section 1. Policy Overview*	
State: ND Year:	98/99
The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of time.	N/A
3. If "YES," the longest possible period of exemption is:	
State policy allows accommodations in state assessments for LEP students.	YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	NO
6. State policy specifies that when certain accommodations are used,	YES
scores are not included in state, district and/or school totals.	
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	YES
8. If "YES," state policy specifies alternate (alternative) assessments.	NO

## Comments related to questions 1-8

- Q 6. Scores of students who receive the following accommodations are excluded from the average: a) Extended testing time; b) Provide complete test on audio tape; c) Read the test to the student.
- Q 7. "If a student does not participate in the statewide achievement testing program, the school must provide an alternative form of academic achievement assessment." No further specific information is given.

The documents provided indicate that, in North Dakota, the state does not provide policies or guidelines regarding criteria for accommodations nor for who should decide on LEP student participation in statewide assessments, nor is there a maximum amount of time a student can receive exemptions.

The following 2 excerpts from the documents provided help describe the state of the issue of LEP students in North Dakota:

- \* "Many schools have a very informal method of identifying LEP students. It is not very consistent or valid."
- \* "LEP figures in North Dakota fluctuate because of inconsistency in reporting. Because there are no state requirements or funding, there is little incentive to accurately collect data ...."

\*"N/A" means "Not addressed."

Section 1. Policy Overview	
State: NJ	Year: 98/99
1. The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of	time. YES
3. If "YES," the longest possible period of exemption is:	years
4. State policy allows accommodations in state assessments for LEP stude	ents. YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	YES
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	N/A
7. State policy allows alternate (alternative) assessments for LEP students whom the regular assessment, even with accommodations, is not appropriate	
8. If "YES," state policy specifies alternate (alternative) assessments.  *"N/A" means "Not addressed."	NO

## Comments related to questions 1-8

- Q 4. At the elementary school and grade 8 assessments; not for grade 11 assessments.
- Q 8. Alternative assessments can include the following:
- \* Native language achievement tests;
- \* Teacher-made and criteria-referenced tests in a student's native language;
- \* Assessments made with the assistance of an individual proficient in the student's native language;
- \* Assessment in the English language administered under the supervision of a certified teacher or guidance counselor;
- \* Performance assessment; and/or
- \* Writing samples and other classroom work from the student.

The document fumished gives no indication that New Jersey provides guidelines for appointing decision-makers to handle LEP student inclusion or accommodations on statewide assessments, for recommending specific alternative assessments, nor for whether LEP student scores are to be included in reporting.

If "YES." state policy specifies alternate (alternative) assessments. YES \*"N/A" means "Not addressed."

#### Comments related to questions 1-8

- Q 5. Beyond offering a Spanish version of the New Mexico High School Competency Examination, the state prohibits all students, including LEP students, from receiving accommodations on statewide assessments. The fact that the state does allow tests in Spanish, but prohibits all accommodations indicates that in New Mexico, translated versions of tests are not considered an accommodation.
- Q 8. For the writing test (grades 4, 6, 8): "No student should undergo a modified administration of the writing assessment due to limited English skills, but rather should have an appropriate alternative assessment in the home language."
- Q 8. For the reading test (grades 1, 2, 4, 6, 8): Students exempted from taking statewide tests in English must take the tests in a language appropriate for each student. "If an appropriate test does not exist for a particular language, then educational achievement must be assessed by each student's teacher(s). Demonstration of mastery may involve the following:
- 1. Classroom, school, or district tests; 2. Student class work; and 3. Systematic teacher observations."
- Q 8. The state allows the administration of standardized achievement tests in Spanish. Recommended tests are La Prueba de Realizacion en Espanol, Supera, and Aprenda 2: La Prueba de Logros en Espanol.

The documents provided indicate that, in New Mexico, there are no statewide guidelines for selecting a committee to decide on LEP student participation in statewide assessments.

Section 2. Inclusion and Exemption Po	Diicies"		
State: NM		Year: 9	8/99
EP Definition:		Source of definition:**	Other

Section 1. Policy Overview	
State: NY	Year: 98/99
1. The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of	time. N/A
3. If "YES," the longest possible period of exemption is:	
4. State policy allows accommodations in state assessments for LEP stude	ents. YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	YES
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	N/A
7. State policy allows alternate (alternative) assessments for LEP students whom the regular assessment, even with accommodations, is not appropriately	
8. If "YES," state policy specifies alternate (alternative) assessments.  *"N/A" means "Not addressed."	

# Comments related to questions 1-8

The documents provided indicate that, in New York State:

Document 1 states that "all LEP students must be provided with intensive English language instruction" and "a state and national search for effective models must be conducted." The state has designed a 12-step plan to provide appropriate services for ELLs, which is to be phased in from 1999 - 2001.

<sup>\*</sup> The state does not provide specific guidelines regarding the participation of LEP students in statewide testing, including who should be selected to serve on a decision-making committee, and what criteria should be considered when making appropriate decisions;

<sup>\*</sup> The state has no policy that allows for alternate or alternative assessments for LEP students who are exempted from statewide assessments.

Section 2. Inclusion and Exemption Po	licies*
State: NY	Year: 98/99

#### Comments related to questions 9 & 10

Q 10, #7. For grades 4, 8: If a student scores at or above the 30th percentile on an (unspecified) English reading test, the student must take part in the English Language Arts (ELA) and Mathematics assessments. If a student scores below the 30th percentile, he/she may be exempted from the ELA assessment. If a student scores below the 30th percentile and the D.O.E. has a written translation of the Mathematics test in the student's native language, the student is required to take the test, either in English or in the student's native language. If the D.O.E. does not provide a written translation in the student's native language, the student may be exempted from the Mathematics test.

Section 1. Policy Overview\* State: OH Year: 98/99 1. The state has a policy regarding the inclusion and/or exemption of LEP **YES** students in state mandated assessments. 2. State policy allows exemptions for LEP students for a specific amount of time. N/A 3. If "YES," the longest possible period of exemption is: State policy allows accommodations in state assessments for LEP students. YES State policy prohibits specific accommodations from being offered NO in state assessments for LEP students. State policy specifies that when certain accommodations are used, N/A scores are not included in state, district and/or school totals. State policy allows alternate (alternative) assessments for LEP students for YES whom the regular assessment, even with accommodations, is not appropriate. 8. If "YES," state policy specifies alternate (alternative) assessments. NO \*"N/A" means "Not addressed."

#### Comments related to questions 1-8

- Q 1. A policy has been proposed and is under consideration.
- Q 7, 8. There is an alternative administration of the 9th grade Reading, Mathematics, and Citizenship assessments, but not the Writing assessment.

The documents provided indicate that, in Ohio, although there is no statewide policy regarding the inclusion and exemption of LEP students in statewide testing, such a policy has been proposed and is being considered. Aspects of the new proposal that have received mention in the documents are treated in general terms, indicating that the proposal will not address, or address specifically, such issues as the definition and identification of LEP students, inclusion, exemption, and accommodations criteria, and selection of appropriate team members for deciding on the participation of LEP students in statewide testing.

# Comments related to questions 9 & 10

Q 9, 10. Although these issues are not addressed, a policy has been proposed and is being considered. Under the proposed policy, the decision regarding LEP student inclusion and exemption would be made by "school districts"; no further specific information was provided. The criteria for exemption, under the new proposal, would be the amount of time a student has spent in English speaking schools. Students with less than 2 years in an English speaking school would be eligible for exemption.

<sup>\*\* &</sup>quot;FR" means Federal Register (1984). "IASA" means Improving America's School Act (1994).

Section 1. Policy Overview*	
State: OR Year:	98/99
The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of time.	N/A
3. If "YES," the longest possible period of exemption is:	
4. State policy allows accommodations in state assessments for LEP students.	YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	NO
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	YES
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	YES
8. If "YES," state policy specifies alternate (alternative) assessments.	YES

#### Comments related to questions 1-8

\*"N/A" means "Not addressed."

- Q 6. Though the issue of inclusion and exclusion of LEP student test scores is not specifically addressed in the documents provided, document 1 indicates that scores of students who took the bilingual version of the mathematics test "are not included in averages."
- Q 8. The state offers Form "E" versions of the state assessments. Form "E" versions are available for grades 3, 5, and 8, in Reading/Literature and Mathematics only, including bilingual versions in Spanish-English and Russian-English. The bilingual versions of Form "E" tests do not reduce the amount of "language" on the test. "Form 'E' versions are intended to provide more accurate scores for those students likely to respond to fewer than 30% of answers correctly."

The documents further indicate that Oregon identifies certain accommodations as maintaining standardized conditions and others as modifications that do not maintain standardized conditions, though there is no information provided that addresses the relationship, if any, between these differentiations and any effect(s) these have on score reporting.

Oregon imposes no maximum time limit on exemptions of LEP students from statewide testing. There is no mention in the documents provided of a statewide effort to provide services for LEP students who do not qualify to participate in statewide testing, nor of alternate or alternative assessments for LEP students.

### Comments related to questions 9 & 10

Q 9, b. Parents who object to their child's participation in statewide assessments may have their child exempted. Q 10, #4. On the reading and writing subtests of the Woodcock-Munoz, a student who earns a score of 4 or above (or an equivalent score on another reading and writing assessment), will take the Oregon Statewide Assessments in English. A student who scores above a 1 in either the reading and writing subtests in English or on a native language test in Spanish or Russian, is eligible to use the bilingual version of the mathematics test. A student who scores a 1 in a native language test and a 1 on the reading and writing subtest in English, may be exempt.

Q 10, #11. As determined by a formal proficiency test (unspecified).

Q 10. A student may be exempt from one subtest and included in others.

State policy specifies that when certain accommodations are used, N/A scores are not included in state, district and/or school totals. 7. State policy allows alternate (alternative) assessments for LEP students for N/A whom the regular assessment, even with accommodations, is not appropriate. 8. If "YES," state policy specifies alternate (alternative) assessments. \*"N/A" means "Not addressed."

#### Comments related to questions 1-8

The Handbook for Assessment Coordinators covers the above topics briefly. LEP students who have been in the U.S. for more than three years are excluded. Those who have been in the U.S. for more than three years are included. Accommodations are minimal. Data is collected regarding the student's LEP status, whether the student has been in U.S. schools for at least three years, and whether he or she was given extended time. "This is done so that the DRC [the test contractor] and the [State Education] Department will be aware that the sample may inaccurately reflect the school population."

<sup>&</sup>lt;u>Comments related to questions 9 & 10</u>
"Students who do not understand, speak, read or write any English and have been in U.S. school systems less than three years should be excused from assessments." This approach seems to encourage exclusion, although the coordinator's handbook also states that all students should participate and exclusions should be kept to a minimum.

### Comments related to questions 11-13

The accommodations policy included in the handbook was prepared by the Eastern Instructional Support Center. It focuses on students with disabilities. No parallel version for LEP students is provided.

Q13 #3 Reading aloud the reading assessment is prohibited.

Q13 #18 Students can move to another room for extended time after the majority of students have completed their work. Q13 #20 Extended time is given to all students on reading and mathematics components; LEP students can also take more time on the writing component.

Q13 #4, 7, 8, 11, 12 Students must read the "passages, tasks and items in English and respond to written portions in English."

# Comments related to questions 1-8

- Q 3. Expressed as one testing cycle.
- Q 6. Scores of LEP students classified as advanced, using TESOL classification standards, are included. The scores of students classified as intermediate are not included. Scores of intermediate level students are sheltered for one testing cycle, in the expectation that they will progress to the advanced level or beyond by the next testing cycle.

The documents provided indicate that, in Rhode Island, while there are policies regarding many aspects of the participation and accommodation of LEP students in state assessments, some areas lack specific information. The criteria provided for inclusion, exemption, and accommodations, for example, are general. Similarly, the state provides no guidelines for defining or identifying LEP students.

State policy allows alternate (alternative) assessments for LEP students for NO whom the regular assessment, even with accommodations, is not appropriate. 8. If "YES." state policy specifies alternate (alternative) assessments.

#### Comments related to questions 1-8

\*"N/A" means "Not addressed."

Information regarding standardized assessments and LEP students is available in the test coordinator's manual. Suggestions regarding informal classroom assessments is available on a teacher-friendly handout.

In addition, there is an alternative holistic score scale available to LEP and ESL students designed to "place emphasis on the conveyance of meaning and other linguistic accommodations..." The score scale was created because "it has been evidenced that in the rigorous task of second language writing, linguistic and cultural interference may take place which would hinder the recognition of an ESL student's ability." Districts are free to develop their own manner of identifying students who are eligible for this scale.

#### Comments related to questions 9 & 10

\*\* "FR" means Federal Register (1984). "IASA" means Improving America's School Act (1994).

Q9b A letter of waiver from a parent or guardian must accompany the decision of an academic team that taking statewide assessments is not in the student's best interest.

The criteria in Q10 must all be met to exempt a student from statewide assessment. "As soon as the LEP student has reading and writing abilities in English, s/he should begin taking standardized tests. The school system is responsible to prepare all students to participate fully in the educational system. Although the test scores will probably not accurately reflect all that the student knows (due to their [sic] limited English proficient), the information will offer necessary baseline data on the student."

Q10 #2 If three years or less, student is eligible for exemption.

Q10 #4 Tests include Language Assessment Scales (LAS), IPT-IDEA Proficiency Test, Woodcock-Munoz, and Language Assessment Battery (LAB)

"During the period of exemption, a school district is still responsible for the student's academic progress and is required to chart that progress by informal means (informal assessment, grading), as well as formal means (language assessment instrument)."

#### Comments related to questions 11-13

Q12 #4 Students whose scores fall below fluent on their language assessment test but who do not meet the exemption criteria may use accommodations when taking state assessments.

Q12 #2 & #10 These are the two criteria that determine eligibility for the use of the Alternative Holistic Score Scale on the Basic Skills Assessment Program (BSAP), Writing Subtest. The time limit is less than eight years in English-medium instruction.

Q13 #3 Oral administration is allowed for the Palmetto Achievement Tests (PACT) Mathematics and Science Tests and the BASP Exit Examination in Reading and Mathematics Tests.

(For the Reading Subtest, the student's record reflects that his/her score reflects the ability to process information read to him or her, not the ability to decode printed symbols.)

Q13 #26 Students are permitted to use "word-by-word bilingual dictionaries" that do not include definitions during all BSAP Exit Examination Subtests and the PACT; Bilingual dictionaries that include definitions may be used during the BSAP Exit Examination Writing Subtest and day 1 of the PACT English Language Arts Test in grades 6, 7, and 8 only.

Q13 #27 See above (Q12 #2 & #10) for criteria related to the use of the Alternative Holistic Score Scale.

#### Comments related to questions 1-8

- Q 4. The state offers the Texas Assessment of Academic Skills (TAAS) in Spanish in grades 3 through 6.
- Q 8. An alternate assessment is required when a student is exempted from the TAAS tests.
- Q 8. The state offers a list of state-approved alternate assessments appropriate for various grade levels and various content areas. Approved tests include: IDEA, LAS, Woodcock-Munoz, CAT, CTBS, ITBS, TAP, MAT 7, SAT 9, TerraNova, TASK, La Prueba Riverside de Realizacion en Espanol, SABE 2, Aprenda 2: La Prueba de Logros en Espanol, and Terra Nova Supera
- Q 8. In grades 3 through 6, released TAAS tests from previous administrations can be offered.
- Q 8. For students who may not be literate and for whom paper and pencil tests may not be valid, portfolio assessments may be used.

The documents provided indicate that:

\*"N/A" means "Not addressed."

\* Texas requires each school district to establish a Local Proficiency Assessment Committee (LPAC) to decide on LEP students' participation in statewide assessments.

Section 2. Inclusion and Exemption Policies*			
State: TX	Year: 98/99		
LEP Definition:	Source of definition:** Other		
	whose primary language is other than English and whose English		
9. The decision regarding LEP student inclusi	on/exemption is made by:		
State policy addresses this issue. YES	e. School/district official(s)		
a. Student	f. Test administrator(s)		
b. Parent(s)/guardian(s)	g. Local committee (members not specified)		
c. Student's classroom teacher(s)	h. Other(s) A language proficiency assessment committee (LPAC)		
d. Student's ESL/bilingual teacher(s)			
10. The criteria for inclusion/exemption are:			
State policy addresses this issue. YES	6. Performance in school work		
1. Time in U.S.	7. Performance on other test(s)		
2. Time in U.S. schools/English speaking schools	8. Academic background in home language		
3. Time in this state's schools	9. Language program placement Y		
4. Formal assessment of English proficiency	10. Teacher observation/recommendation		
5. Informal assessment of English proficiency	11. Other(s) Spanish abilities; Language of instruction/test.		
* "Y" means "Yes, state policy mentions this item."  ** "FR" means Federal Register (1984). "IASA" means Improving America's School Act (1994).			
Q 9, h. Committee members are to include a professional educator, a parent of a limited English proficient student,			

Q 10, #2. If less than 3 years, student is eligible for exemption.

Q 10, #7. Unspecified.

Q 10. For exit level tests, a student who is a recent immigrant (no more than 12 months in the U.S.) may be exempted for one test administration; otherwise, LEP exemptions are not permitted from exit level tests and end-of-course tests. The maximum total time of exemption from the English language version of the TAAS tests is 3 years, including years taking the Spanish version. For a student who is enrolled continuously beginning at least in the first grade, the LPAC is discouraged from selecting exemptions for more than 2 years. A student who does not participate in a bilingual or ESL program due to parental denial can not qualify for an LEP exemption.

Section 1. Policy Overview*	
State: UT Year:	98/99
The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of time.	YES
3. If "YES," the longest possible period of exemption is:  Three years	s
4. State policy allows accommodations in state assessments for LEP students.	YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	NO
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	N/A
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	N/A
8. If "YES," state policy specifies alternate (alternative) assessments.  *"N/A" means "Not addressed."	

## Comments related to questions 1-8

- Q 2, 3. Allowed for the SAT only.
- Q 4. Available for the Core Assessment Program. Accommodations for the SAT assessment are not addressed.

The documents provided indicate that, in Utah:

- \* Participation in the Utah State Core Curriculum's Core Assessment Program is voluntary on the part of school districts;
- \* The state "strongly encourages full inclusion and accommodation," but offers no specific policies or guidelines for addressing the many aspects of LEP student participation and accommodation in statewide assessments.

8. If "YES," state policy specifies alternate (alternative) assessments.	

#### Comments related to questions 1-8

- Q 1. There are no exemptions from the Standards of Learning (SOL) assessments for students enrolled in high school courses associated with the tests.
- Q 2, 3. There is a one-time exemption from the SOL assessments at grades 3, 5, or 8.

\*"N/A" means "Not addressed."

- Q 6. For the SOL exams at grades 3, 5, 8, and for high school end-of-course tests: scores of students who have been enrolled in school fewer than 11 semesters will not be included when calculating the school's accreditation rating. Scores resulting from a nonstandard accommodation must be accompanied by an explanation that the scores resulted from a nonstandard administration of the exam.
- Q 6. For the Virginia Student Assessment Program (VSAP): The scores of LEP students who took the tests without accommodations or with standard accommodations are included in the school/division averages. Scores of those who received non-standard accommodations are not included.

The documents provided indicate that Virginia has established policies and guidelines regarding the participation and accommodation of LEP students in statewide assessments.

State: VA  LEP Definition:	Year: 98/99
A limited English profisiont individual is one where	Source of definition:** IASA
A limited English proficient individual is one who:	
environment where a language other than English is do * is a Native American, or Alaska Native, or a native re language other than English has had a significant impa * is migratory and whose native language is other than than English is dominant; and * who has sufficient difficulty speaking, reading, writing	sident of the outlying areas and comes from an environment where a

#### Comments related to questions 1-8

Q 6, 7, 8. The documents provided contain the terms "Modified Assessments," "Adapted Assessments," "Alternate Assessments," and "Accommodated Assessments." Occasional references to these terms, which follow below, shed some light on the differences among them, but the character and function of each type of assessment is not always clear.

\* An Alternate Assessment differs from an Accommodated Assessment in that the standards being measured are derived from the student's individualized curricula. \* An Adapted Assessment can be out-of-level test editions of regular assessments.

\* Scores from Adapted Assessments and Modified Assessments are not to be included with scores from regular assessments. \* Alternate Assessments are not yet available for the grade 2 Developmental Reading Assessment.

The term LEP is never used; rather, a reasonable assumption is that LEP students fall into the broad category of "students with special needs." No specific guidelines regarding decision-making, accommodations criteria, and alternate assessments are provided.

374

Section 1. Policy Overview\* State: WA Year: 98/99 1. The state has a policy regarding the inclusion and/or exemption of LEP YES students in state mandated assessments. 2. State policy allows exemptions for LEP students for a specific amount of time. YES 3. If "YES," the longest possible period of exemption is: Three years 4. State policy allows accommodations in state assessments for LEP students. YES 5. State policy prohibits specific accommodations from being offered YES in state assessments for LEP students. 6. State policy specifies that when certain accommodations are used, NO scores are not included in state, district and/or school totals. 7. State policy allows alternate (alternative) assessments for LEP students for N/A whom the regular assessment, even with accommodations, is not appropriate. 8. If "YES," state policy specifies alternate (alternative) assessments. NO

#### Comments related to questions 1-8

- Q 3. Expressed as "one administration of the test."
- Q 6. "Reports of results should include students in special populations."

The documents provided indicate that, in Washington, regarding the participation and accommodation of LEP students in statewide assessments, there are no specific state policies or guidelines for:

- \* Defining and identifying LEP students. In fact, Washington doesn't distinguish LEP students as a distinct population. Rather, the term "ESL/Bilingual" is used;
- \* Providing inclusion, exemption, or accommodations criteria;
- \* Providing alternate assessments.

\*"N/A" means "Not addressed."

The policies and guidelines are consistent in that they pass the responsibility of developing specific systems for addressing the many aspects of LEP participation and accommodation in state assessments on to the local school districts.

383

Section 2. Inclusion and Exemption Policies*	
State: WA	Year: 98/99
LEP Definition:	Source of definition:** Other
The state doesn't define LEP as a distinct student populatic ESL/Bilingual students: Students who have a primary lang deficiencies which impair their learning in regular classroon	uage other than English and have English language skill

Section 1. Policy Overview*	
State: WI Year:	98/99
The state has a policy regarding the inclusion and/or exemption of LEP students in state mandated assessments.	YES
2. State policy allows exemptions for LEP students for a specific amount of time.	N/A
3. If "YES," the longest possible period of exemption is:	
4. State policy allows accommodations in state assessments for LEP students.	YES
5. State policy prohibits specific accommodations from being offered in state assessments for LEP students.	YES
6. State policy specifies that when certain accommodations are used, scores are not included in state, district and/or school totals.	N/A
7. State policy allows alternate (alternative) assessments for LEP students for whom the regular assessment, even with accommodations, is not appropriate.	YES
8. If "YES," state policy specifies alternate (alternative) assessments.	NO

#### Comments related to questions 1-8

\*"N/A" means "Not addressed."

Q 8. Students who do not participate in the Wisconsin Knowledge and Concepts Examinations (WKCE), statewide assessments taken at grades 4, 8, and 10, are required to receive an alternate assessment.

Q 8. Wisconsin has identified Alternate Performance Indicators (API) as an alternative means of assessing LEP students. The APIs are in a transitional stage, from a focus on assessing language proficiency to one that presents a clearer picture of a student's academic skills, as well as a student's readiness for participating in the WKCE. The state recognizes that locally developed standards-based alternate assessments offer the "best practices" solution for full inclusion of students with LEP at the early English language proficiency levels.

The documents provided indicate that Wisconsin has focused on establishing a framework for helping local school districts develop APIs. The state does not provide specific guidelines for selecting a committee to decide on LEP student participation and accommodations in statewide testing, or for recommending inclusion/exemption and accommodations criteria. Local schools districts must decide on these matters.

Section 2. Inclusion and Exemption Policies*	•
State: WI	Year: 98/99
LEP Definition:	Source of definition:** Other
A pupil whose ability to use the English language is limit	ted because of the use of a non-English language in his or her famili has difficulty, as defined by rule by the state superintendent, in
